Numerical Control (CNC)

Alarm/Parameter Manual

C80 Series
Introduction

This manual is a guide for using the Mitsubishi Electric CNC C80 Series. Be sure to keep this manual always at hand.

Notes on Reading This Manual
(1) This manual explains general parameters as viewed from the NC. For information about each machine tool, refer to manuals issued from the machine manufacturer. If the descriptions relating to "restrictions" and "allowable conditions" conflict between this manual and the machine manufacturer's instruction manual, the later has priority over the former.
(2) This manual is intended to contain as much descriptions as possible even about special operations. The operations to which no reference is made in this manual should be considered impossible.

⚠️ CAUTION
⚠️ For items described as "Restrictions" or "Usable State" in this manual, the instruction manual issued by the machine tool builder takes precedence over this manual.
⚠️ Items not described in this manual must be interpreted as "not possible".
⚠️ This manual is written on the assumption that all the applicable functions are included. Some of them, however, may not be available for your NC system. Refer to the specifications issued by the machine tool builder before use.
⚠️ Refer to the Instruction Manual issued by each machine tool builder for details on each machine tool.
⚠️ Some screens and functions may differ depending on the NC system (or its version), and some functions may not be possible. Please confirm the specifications before use.
⚠️ Do not connect NC system to the Internet-connected network.
⚠️ To maintain the safety of the NC system against unauthorized access from external devices via the network, take appropriate measures.

In this manual, the following abbreviations might be used.
L system: Lathe system
M system: Machining center system
MTB: Machine tool builder

Also refer to the manuals on "Manual List" as necessary.
Manual List

Manuals related to M800/M80/E80/C80 Series are listed as follows.
These manuals are written on the assumption that all optional functions are added to the targeted model.
Some functions or screens may not be available depending on the machine or specifications set by MTB. (Confirm the specifications before use.)
The manuals issued by MTB take precedence over these manuals.

Precautions for Safety

Always read the specifications issued by the machine tool builder, this manual, related manuals and attached documents be-
fore installation, operation, programming, maintenance or inspection to ensure correct use.
Understand this numerical controller, safety items and cautions before using the unit.
This manual ranks the safety precautions into "DANGER", "WARNING" and "CAUTION".

⚠️ DANGER
When the user may be subject to imminent fatalities or major injuries if handling is mistaken.

⚠️ WARNING
When the user may be subject to fatalities or major injuries if handling is mistaken.

⚠️ CAUTION
When the user may be subject to injuries or when physical damage may occur if handling is mistaken.
Note that even items ranked as " CAUTION", may lead to major results depending on the situation. In any case, important in-
formation that must always be observed is described.
The following signs indicate prohibition and compulsory.

This sign indicates prohibited behavior (must not do).
For example, ❌ indicates "Keep fire away".

This sign indicated a thing that is pompously (must do).
For example, ⚡ indicates "it must be grounded".

The meaning of each pictorial sign is as follows.

<table>
<thead>
<tr>
<th>⚠️ CAUTION</th>
<th>⚠️ CAUTION</th>
<th>⚠️ CAUTION HOT</th>
<th>⚠️ Danger</th>
<th>⚠️ Danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>❌ Prohibited</td>
<td>❌ Disassembly is prohibited</td>
<td>❌ KEEP FIRE AWAY</td>
<td>⚡ Electric shock risk</td>
<td>⚠️ explosive</td>
</tr>
</tbody>
</table>

For Safe Use
Mitsubishi Electric CNC is designed and manufactured solely for applications to machine tools to be used for industrial purpos-
eses.
Do not use this product in any applications other than those specified above, especially those which are substantially influential
on the public interest or which are expected to have significant influence on human lives or properties.

⚠️ DANGER
Not applicable in this manual.

⚠️ WARNING
Not applicable in this manual.
(1) Product and manual
- For items described as "Restrictions" or "Usable State" in this manual, the instruction manual issued by the machine tool builder takes precedence over this manual.
- Items not described in this manual must be interpreted as "not possible".
- This manual is written on the assumption that all the applicable functions are included. Some of them, however, may not be available for your NC system. Refer to the specifications issued by the machine tool builder before use.
- Refer to the Instruction Manual issued by each machine tool builder for details on each machine tool.
- Some screens and functions may differ depending on the NC system (or its version), and some functions may not be possible. Please confirm the specifications before use.
- Do not connect NC system to the Internet-connected network.
- To maintain the safety of the NC system against unauthorized access from external devices via the network, take appropriate measures.

(2) Adjustments
- Do not adjust or change the parameter settings greatly as operation could become unstable.
- In the explanation on bits, set all bits not used, including blank bits, to "0".

(3) Troubleshooting
- If the battery low warning is issued in the controller side, save the machining programs, tool data and parameters in an input/output device, and then replace the battery. When the battery alarm is issued, the machining programs, tool data and parameters may have been destroyed. Replace the battery and then reload the data.
- If the battery low warning is issued in the drive unit side, immediately replace the battery. Replace the batteries while applying the drive unit's control power.

(4) Maintenance, inspection and part replacement
- Do not short-circuit, charge, heat, incinerate or disassemble the battery.
- Dispose of the spent battery according to local laws.
Disposal

(Note) This symbol mark is for EU countries only.
This symbol mark is according to the directive 2006/66/EC Article 20 Information for end-users and Annex II.

Your MITSUBISHI ELECTRIC product is designed and manufactured with high quality materials and components which can be recycled and/or reused.
This symbol means that batteries and accumulators, at their end-of-life, should be disposed of separately from your household waste.
If a chemical symbol is printed beneath the symbol shown above, this chemical symbol means that the battery or accumulator contains a heavy metal at a certain concentration. This will be indicated as follows:
Hg: mercury (0.0005%), Cd: cadmium (0.002%), Pb: lead (0.004%)
In the European Union there are separate collection systems for used batteries and accumulators.
Please, dispose of batteries and accumulators correctly at your local community waste collection/recycling centre.

Please, help us to conserve the environment we live in!
Trademarks

MELDAS, MELSEC, EZSocket, EZMotion, iQ Platform, MELSEC iQ-R, MELSOFT, GOT, CC-Link, CC-Link/LT, CC-Link IE, CC-Link IE/field, EcoMonitorLight and SLMP are either trademarks or registered trademarks of Mitsubishi Electric Corporation in Japan and/or other countries.

Ethernet is a registered trademark of Xerox Corporation in the United States and/or other countries.
Microsoft®, Windows®, SQL Server® and Access® are either trademarks or registered trademarks of Microsoft Corporation in the United States and/or other countries.
SD logo and SDHC logo are either registered trademarks or trademarks of LLC.
UNIX is a registered trademark of The Open Group in the United States and/or other countries.
Intel® and Pentium® are either trademarks or registered trademarks of Intel Corporation in the United States and/or other countries.
MODBUS® is either a trademark or a registered trademark of Schneider Electric USA, Inc. or the affiliated companies in Japan and/or other countries.
EtherNet/IP is a trademark of Open DeviceNet Vendor Association, Inc.
PROFIBUS-DP and PROFINET are either trademarks of Profibus International.
Oracle® is a registered trademark of Oracle Corporation, the subsidiaries, or the affiliated companies in the United States and/or other countries.
VNC is a registered trademark of RealVNC Ltd. in the United States and other countries.

Other company and product names that appear in this manual are trademarks or registered trademarks of the respective companies.
本製品の取扱いについて

( 日本語 /Japanese)
本製品は工業用 (クラス A) 電磁環境適合機器です。販売者あるいは使用者はこの点に注意し、住商業環境以外での使用をお願いいたします。

Handling of our product

(English)
This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Alarm
Operation Errors (M)
## 1 Operation Errors (M)

### M00 Aux ax dog overrun

**Details**
When executing dog-type reference position, the zero point return speed is too fast or the dog length is too short.

**Remedy**
- Lower the zero point return speed or increase the dog length.

### M00 Aux ax R-pnt direction illegal

**Details**
When executing reference position return, the axis was moved in the opposite of the designated direction.

**Remedy**
- Move the axis in the correct direction.

### M00 Aux ax external interlock

**Details**
The axis interlock function is valid.

**Remedy**
- Cancel the interlock signal.

### M00 Aux ax internal interlock

**Details**
An interlock was established by the servo OFF function.

**Remedy**
- Cancel the servo OFF.

### M00 Aux ax soft limit

**Details**
The stored stroke limit was reached.

**Remedy**
- Check the stored stroke limit setting and machine position.

### M00 Aux ax R ret invld at abs alm

**Details**
Reference position return was executed during an absolute position alarm.

**Remedy**
- Initialize the absolute position reference point and then fix the absolute position coordinates.

### M00 Aux ax R ret invld at ini

**Details**
Reference position return was executed during absolute position initial setting.

**Remedy**
- Initialize the absolute position reference point and then fix the absolute position coordinates.

### M01 Dog overrun

**Details**
When returning to the reference position, the near-point detection limit switch did not stop over the dog, but overran the dog.

**Remedy**
- Increase the length of the near-point dog.
- Reduce the reference position return speed.
Details
One of the axes did not pass the Z-phase during the initial reference position return after the power was turned ON.

Remedy
• Move the encoder one rotation or more in the opposite direction of the reference position, and repeat reference position return.

Details
When manually returning to the reference position, the return direction differs from the axis movement direction selected with the AXIS SELECTION key.

Remedy
• The selection of the AXIS SELECTION key's +/- direction is incorrect. The error is canceled by feeding the axis in the correct direction.

Details
The external interlock function has activated (the input signal is "OFF") and one of the axes has entered the interlock state.

Remedy
• As the interlock function has activated, release it before resuming operation.
• Correct the sequence on the machine side.
• Check for any broken wires in the "interlock" signal line.

Details
The internal interlock state has been entered.
The axis with absolute encoder has been detached.
A command for the manual/automatic simultaneous valid axis was issued from the automatic mode.
The manual speed command was issued while the "tool length measurement 1" signal is ON.
A travel command has been issued to an inclined axis whose basic axis is in control axis synchronization between part systems.
Selected an axis other than the 1st axis when the manual speed command was issued.
A travel command has been issued to an axis stopped by the collision detection function.
Positioning or interpolation command was issued during the spindle-mode rotary axis control mode.

Remedy
• The servo OFF function is valid, so release it first.
• An axis that can be removed has been issued, so perform the correct operations.
• The command is issued in the same direction as the direction where manual skip turned ON, so perform the correct operations.
• During the manual/automatic simultaneous mode, the axis commanded in the automatic mode became the manual operation axis. Turn OFF the "manual/automatic valid" signal for the commanded axis.
• Turn ON the power again, and perform absolute position initialization.
• Turn OFF the "tool length measurement 1" signal to start the program by the manual speed command.
• Cancel the control axis synchronization between part systems, then issue a travel command to the inclined axis.
• Select the 1st axis of each part system when issuing the manual speed command.
• Cancel the collision detection alarm.
• Check the program after cancelling the error by reset.

Details
The stroke end function has activated (the input signal is "OFF") and one of the axes is in the stroke end status.

Remedy
• Move the machine manually.
• Check for any broken wires in the "stroke end" signal line.
• Check for any limit switch failure.
Operation Errors (M)

### M01 S/W stroke end axis exists 0007

**Details**
- The stored stroke limit I, II, IIB or IB function has activated.

**Remedy**
- Move the machine manually.
- Correct any setting error of the parameters for the stored stroke limit.

### M01 Chuck/tailstock stroke end ax 0008

**Details**
- The chuck/tail-stock barrier function turned ON, and an axis entered the stroke end state.

**Remedy**
- Reset the alarm with reset, and move the machine in the reverse direction.

### M01 Ref point return No. invalid 0009

**Details**
- 2nd reference position return was performed before 1st reference position return has been completed.

**Remedy**
- Execute 1st reference position return.

### M01 Illegal op in mid pt sg block 0013

**Details**
- The operation mode was changed to MDI during single block stop at the middle point of G28/G29/G30.

**Remedy**
- Change the operation mode.
- Reset to clear the alarm.

### M01 Sensor signal illegal ON 0019

**Details**
- The sensor signal was already ON when the tool measurement mode (TLM) signal was validated.
- The sensor signal turned ON when there was no axis movement after the tool measurement mode (TLM) signal was validated.
- The sensor signal turned ON at a position within 100 μm from the final entry start position.

**Remedy**
- Turn the tool measurement mode signal input OFF, and move the axis in a safe direction.
- Disabling the sensor signal also clears the operation alarm.

(Note) When the “tool length measurement 1” signal is disabled, the axis can be moved in either direction. Pay attention to the movement direction.

### M01 Ref point retract invalid 0020

**Details**
- Reference position retract was performed while the coordinates had not been established.

**Remedy**
- Execute reference position return.

### M01 Tool ofs invld after R-pnt 0021

**Details**
- Reference position return had been performed during the tool retract and return, which invalidated the tool compensation amount after the reference position return.

**Remedy**
- The error is cleared if the operation mode is changed to other than reference position return before the axis performs reference position return.
- The error is cleared when the tool return is completed.
- The error is cleared if reset 1 is input or the emergency stop button is pushed.
M01 R-pnt ret invld at abs pos alm 0024
Details
A reference position return signal was enabled during an absolute position detection alarm.
Remedy
• Reset the absolute position detection alarm, and then perform the reference position return.

M01 R-pnt ret invld at zero pt ini 0025
Details
A reference position return signal was input during zero point initialization of the absolute position detection system.
Remedy
• Complete the zero point initialization, and then perform reference position return.

M01 High-accuracy skip disabled 0028
Details
The drive unit's hardware or software does not conform to the high-accuracy skip.
Remedy
• The software or hardware does not conform to the function. Contact service center.

M01 Hi-ac skip coord retrieval err 0029
Details
Failed to retrieve the skip coordinate value from the drive unit.
Remedy
• Check the wiring.
• Check the parameters.

M01 Now skip on 0030
Details
The "skip input" signal remains enabled when the operation has shifted from skip retract to measurement.
Remedy
• Increase the skip retract amount.

M01 No skip 0031
Details
Even though the 1st skip was to the correct position, the 2nd skip could not be found.
Remedy
• Check whether the measurement target has moved.

M01 Rtn dir err in manual measure 0033
Details
Return direction in manual measurement is the opposite of the parameter setting.
Remedy
• Check the setting of the parameter "#2169 Rtn dir err in manual measure" (Return direction in manual measurement).
• Move the axis manually in the direction to a safe position, then reset.

M01 No specifications 0036
Details
The specification is not supported.
Remedy
• Check the specifications.
### M01 Chopping axis R-pnt incomplete 0050

**Details**
Chopping mode has been entered while the chopping axis has not completed reference position return. All axes interlock has been applied.

**Remedy**
- Reset the NC or disable the "chopping" signal, and then carry out the reference position return.

### M01 Synchronous error excessive 0051

**Details**
The synchronization error of the master and slave axes exceeded the allowable value under synchronous control. A deviation exceeding the synchronization error limit value was found with the synchronization deviation detection.

**Remedy**
- Select the correction mode and move one of the axes in the direction in which the errors are reduced.
- Check the parameter "#2024 synerr".
- Increase the allowable value or reset it to "0" (check disabled).
- When using simple C-axis synchronous control, set the contents of the R2589 register to "0".

### M01 No spindle select signal 0053

**Details**
Synchronous tapping command was issued when the spindle select signals (SWS) for all spindles were OFF in the multiple-spindle control II.

**Remedy**
- Turn ON the spindle select signal (SWS) responding to the tapping spindle before performing the synchronous tapping command.

### M01 No spindle serial connection 0054

**Details**
Synchronous tapping command was issued when the spindle that the spindle select signal (SWS) was ON was not serially connected in the multiple-spindle control II.

**Remedy**
- Make sure the spindle select signal (SWS) for the responding spindle is ON.
- Consider the machine construction when issuing the command.

### M01 Spindle fwd/rvs run para err 0055

**Details**
Asynchronous tapping command was issued when M code of the spindle forward/reverse run command, set by the parameter "#3028 sprcmm", was one of the followings in the multiple-spindle control II.
- M0, M1, M2, M30, M98, M99, or M198
- M code No. that commands to enable/disable the "macro interrupt" signal

**Remedy**
- Correct the parameter "#3028 sprcmm" (Tap cycle spindle forward run/reverse run M command) setting.

### M01 Tap pitch/thread number error 0056

**Details**
The command for the pitch or the number of threads is not correct in the synchronous tapping command of the multiple-spindle control II.
The pitch is too small for the spindle rotation speed.
The thread number is too large for the spindle rotation speed.

**Remedy**
- Correct the pitch, number of threads or rotation speed of the tapping spindle.
### M01 Wait for tap retract 0057

**Details**
The axis travel command is interlocked as the tap retract is being enabled.

**Remedy**
- If tapping is necessary, perform tapping retract in advance. However, tapping retract is not allowed during cycle start operation. Carry out tapping retract after resetting.
- If tapping is not necessary, cancel the tap retract enabled condition by the tap retract enabled cancel signal.

### M01 Handle ratio too large 0060

**Details**
The handle ratio is too large for the handle feed clamp speed.
(The handle feed clamp speed changes according to the rapid traverse rate, external feedrate, maximum speed outside the soft limit range and etc. (or external deceleration speed when external deceleration is valid))

Too large handle ratio means the ratio with which the machine is unable to move the distance of \([\text{iunit} \times \text{handle ratio}]\) within 0.1ms at the clamp speed.

**Example**
- When \(\text{iunit}=\text{B} (0.001\text{mm})\) and clamp speed \(\text{cs} (\text{mm/min})\)
  - The operation error (M01 0060) will occur if \(\text{ratio M}>\text{cs}/60(\text{s})\times0.1(\text{ms})/0.001(\text{mm})=\text{cs} \times 10/6.\)

**Remedy**
- Change the settings of the handle feed clamp speed or the handle ratio.

### M01 R-pos offset value illegal 0065

**Details**
At the start of reference position initial setting, the parameter "#2034 rfpofs" (Distance-coded reference position detection offset) is not set to "0".

**Remedy**
- Set the parameter "#2034 rfpofs" to "0", then turn the power ON again to perform the reference position initial setting.

### M01 R-pos scan distance exceeded 0066

**Details**
Reference position could not be established within the maximum scan distance.

**Remedy**
- Check the scale to see if it has dirt or damage.
- Check if the servo drive unit supports this function.

### M01 Illegal op in wk instl err cmp 0070

**Details**
One of the following operations was attempted during workpiece installation error compensation.
- Manual interruption
- Automatic operation handle interruption
- MDI interruption
- PLC interruption

**Remedy**
- Return the operation mode to the original mode to remove the cause. During workpiece installation error compensation, manual interruption, automatic operation handle interruption, MDI interruption, PLC interruption, etc. is not allowed.
1 Operation Errors (M)

M01 Illegal op in dia/rad select 0095

Details
An axis used in the following functions is also used as an axis to perform diameter/radius designation selection.
- Chopping
- Synchronization control

Or diameter/radius designation selection (G10.9) was issued to the axis in the above mode.

Remedy
- Check the program.
- Do not carry out the following functions using an axis to perform diameter/radius designation selection.
  - Chopping
  - Synchronization control

M01 No operation mode 0101

Details
[No operation mode]
No operation mode
[Aux ax no operation mode]
The operation mode is not designated, or the operation mode was changed during axis movement.

Remedy
[No operation mode]
- Check for any broken wires in the input mode signal wire.
- Check for any failure of the MODE SELECT switch.
- Correct the sequence program.
[Aux ax no operation mode]
- Correctly designate the operation mode.

M01 Cutting override zero 0102

Details
The "cutting feed override" switch on the machine operation panel is set to "0".
The override was set to "0" during a single block stop.

Remedy
- Set the "cutting feed override" switch to a value other than "0" to clear the error.
- If the "cutting feed override" switch has been set to a value other than "0", check for any short circuit in the signal line.
- Correct the sequence program.

M01 External feed rate zero 0103

Details
[External feed rate zero]
The MANUAL FEEDRATE switch on the machine operation panel is set to zero when the machine is in the jog mode or automatic dry run mode.
The "Manual feedrate B speed" signal is set to zero during the jog mode when Manual feedrate B is valid.
The "Each axis manual feedrate B speed" is set to zero during the jog mode when Each axis manual feedrate B is valid.
[Aux ax feedrate 0]
The feedrate set in the operation parameter is zero.
Or the override is enabled but is set to zero.

Remedy
[External feed rate zero]
- Set the MANUAL FEEDRATE switch to a value other than "0" to release the error.
- If the MANUAL FEEDRATE switch has been set to a value other than "0", check for any short circuit in the signal line.
- Correct the sequence program.
[Aux ax feedrate 0]
- Set a value other than zero in the feedrate setting or override value.
<table>

<tbody>
<tr>
<td>M01</td>
<td>F 1-digit feed rate zero</td>
<td>The F1-digit feedrate has been set to &quot;0&quot; when the F1-digit feed command was executed.</td>
<td>Set the F1-digit feedrate (the parameter &quot;#1185 spd_F1&quot; (F1 digit feedrate F1) to &quot;#1189 spd_F5&quot; (F1 digit feedrate F5)).</td>
</tr>
</tbody>
</table>
| M01  | Spindle stop | The spindle stopped during the synchronous feed/thread cutting command. | Rotate the spindle.  
If the workpiece is not being cut, start dry run.  
Check for any broken wire in the spindle encoder cable.  
Check the connections for the spindle encoder connectors.  
Check the spindle encoder pulse.  
Correct the program. (commands and addresses) |
| M01  | Handle feed ax No. illegal | The axis, designated at handle feed, is out of specifications.  
No axis has been selected for handle feed.  
Multiple axes in a part system are allocated to a handle. | Check for any broken wires in the handle feed axis selection signal line.  
Correct the sequence program.  
Check the number of axes in the specifications.  
Check the axis allocation to the handle. |
| M01  | Spindle rotation speed over | Spindle rotation speed exceeded the axis clamp speed during the thread cutting command. | Lower the commanded rotation speed. |
| M01  | Fixed pnt mode feed ax illegal | The axis, designated in the manual arbitrary feed, is out of specifications.  
The feedrate in manual arbitrary feed mode is illegal. | Check for any broken wires in the axis selection signal line or the feedrate line for the manual arbitrary feed mode.  
Check the specifications for the manual arbitrary feed mode. |
| M01  | Block start interlock | An interlock signal has been input to lock the block start. | Correct the sequence program. |
| M01  | Cutting block start interlock | An interlock signal has been input to lock the cutting block start. | Correct the sequence program. |
1 Operation Errors (M)

Details
Restart switch has been turned ON and manual mode has been selected before the restart search is completed.

Remedy
• Search the block to restart.
• Turn the restart switch OFF.

Details
The cycle start button was pressed during program check or in program check mode.

Remedy
• Press the reset button to cancel the program check mode.

Details
The cycle start button was pressed during buffer correction.

Remedy
• Press the cycle start button after the buffer correction is completed.

Details
The cycle start button was pressed during resetting or tape rewinding.

Remedy
• When rewinding the tape, wait for the winding to end, or press the reset button to stop the winding, and then press the cycle start button.
• During resetting, wait for the resetting to end, and then press the automatic start button.

Details
The playback switch was turned ON during editing.

Remedy
• Cancel the editing by pressing the input or previous screen key before turning ON the playback switch.

Details
The turning angle at the block joint exceeded the limit during normal line control.
In normal line control type I:
The parameter "#1523 C_feed" (Normal line control axis turning speed) has not been set.
In normal line control type II:
When turning in the inside of the arc, the set value for the parameter "#8041 C-rot. R" is larger than the arc radius.

Remedy
• Correct the program.
• Correct the parameter "#1523 C_feed" (Normal line control axis turning speed) setting.
• Correct the parameter "#8041 C-rot. R" setting.

Details
Any of the following conditions are occurring.
a) There is no block to run backward
b) Eight blocks without a travel command continued

Remedy
• Execute forward run to clear the alarm.
• Reset to clear the alarm.

The designated orthogonal coordinate axis name is the same as the rotary axis name.</td>
<td>• Correct the rotary axis configuration parameters.</td>
</tr>
</tbody>
</table>
## M01 Operation Errors (M)

### Details
Cycle start was performed with an axis whose return to the restart position was not complete.

### Remedy
- Perform restart position return manually.
- Validate the parameter "#1302 AutoRP" (Automatic return by program restart), then execute cycle start.

### Details
After the cycle start, the "PLC interrupt" signal was turned ON during buffer correction, program restart, arbitrary reverse run, tool retract and return, high-speed high-accuracy control II, NURBS interpolation or single block stop at the middle point of G28/G29/G30.

### Remedy
- By turning OFF the "PLC interrupt" signal, or by resetting the NC the error can be cancelled.

### Details
Restart position return was attempted in a mode where the return is disabled.

### Remedy
- Correct the program restart position.

### Details
Compound type fixed cycle program was interrupted with manual zero point return, and cycle start was carried out without carrying out reset.

### Remedy
- Cancel the program execution by reset.

### Details
During the reverse run in arbitrary reverse run, any one of the part systems reverse-ran for 20 blocks.

### Remedy
- This error is cancelled by forward run.

### Details
Any of the following modes has been turned ON during the manual arbitrary reverse run mode.
- MDI interruption mode
- Manual/automatic simultaneous valid (MAE1 to 8)
- Arbitrary feed mode (PTP)
- Arbitrary reverse control mode (RVMD)
- Manual speed command enabled
- High-speed simple program check mode (SMLK)

### Remedy
- The error can be cancelled by turning OFF the error-causing mode.

### Details
High-accuracy control has been executed in a part system which has 9 or more enabled control axes, except for a slave or synchronized axis.

### Remedy
- Reduce the number of enabled control axes (except for a slave axis and synchronized axis) of the part system to 8 or less through synchronous control, control axis synchronization between part systems, or mixed control before executing high-accuracy control.

1 Operation Errors (M)

### M01 Pre-intrpl variable accel err 0136

**Details**
- The parameter "#12060 VblAccPreInt" (Variable-acceleration pre-interpolation acceleration/deceleration ON) is set to "1" and the parameter "#8090 SSS ON" is set to "0".

**Remedy**
- To enable the variable acceleration pre-interpolation acceleration/deceleration, set the parameter "#8090 SSS ON" to "1".
- To disable the variable acceleration pre-interpolation acceleration/deceleration, set the parameter "#12060 VblAccPreInt" to "0".

### M01 Unable to start automatic mode 0137

**Details**
- Although start of automatic operation is not allowed after a machine groupwise alarm stop ("#1472 mgralmrestart"=0), start of automatic operation has been attempted after the said alarm stop.
- The cycle operation is started with the guide bushing spindle synchronization related spindle is not being set.
- The cycle operation is started while the "G/B spindle synchronization: temporary cancel" signal is turned ON.

**Remedy**
- Remove the cause of the stop by alarm.
- Set the parameter "#1472 mgralmrestart" (Allowing automatic operation to start after machine groupwise alarm stop) to "1".
- Check the parameter "#3074 GBsp".
- Turning OFF the "G/B spindle synchronization: temporary cancel" signal before starting the cycle operation.

### M01 Tool data sorting in progress 0138

**Details**
- Cycle start or graphic check has been attempted during sorting of tool management data.

**Remedy**
- Execute cycle start after the tool data sorting is completed.
- Execute graphic check after the tool data sorting is completed.

### M01 Tolerance control invalid 0139

**Details**
- The parameter "#12066 Tolerance ctrl ON" is set to "1", although "#8090 SSS ON" is "0".

**Remedy**
- To enable the tolerance control, set "#8090 SSS ON" to "1".
- To disable the tolerance control, set "#12066 Tolerance ctrl ON" to "0".

### M01 I1l manualmode select in 3Dcnv 0145

**Details**
- The following unselectable manual mode was selected during 3-dimensional coordinate conversion.
  - manual reference position return

**Remedy**
- Cancel the 3-dimensional coordinate conversion modal.

### M01 Start err in PRM rot manu feed 0146

**Details**
- Axis start has been attempted with any of the following operations while the coordinate rotation by parameter for manual feed is enabled.
  - Tool retract and return
  - Manual tool length measurement
  - Manual skip

**Remedy**
- Turn OFF the "Coordinate rotation by parameter: Coordinate switch for manual feed" signal.
### Details
Two or more of the three basic axes were started at a time for the coordinate rotation by parameter for manual feed.

**Remedy**
- Disable the coordinate rotation by parameter for manual feed or start one axis at a time.

### Details
The override became "0" in the chopping operation.

**Remedy**
- Check the chopping override (R2503).
- Check the rapid traverse override (R2502).

### Details
A chopping axis movement command was issued from the program during the chopping mode. (This alarm will not occur for the command with the movement amount "0".)

**Remedy**
- Press the reset button or turn OFF the "chopping" signal. When the "chopping" signal is turned OFF, the axis returns to the reference position and performs the movement command in the program.

### Details
The bottom dead center position is set to the same position as the upper dead center position.

**Remedy**
- Correct the bottom dead center position.

### Details
Chopping has been attempted while the chopping axis is selected as the handle axis.

**Remedy**
- Select an axis other than the chopping axis as the handle axis, or start chopping after changing the mode to the other mode.

### Details
The drive unit's software or hardware does not conform to the direct command mode.
- Inclined axis control is active.
- Control axis synchronization between part systems is active.
- Control axis superimposition was activated during direct command mode.

**Remedy**
- The software or hardware does not conform to the function. Contact service center.
- Turn the inclined axis control valid signal OFF.
- Turn the synchronous control request signal OFF.
- Turn the superimposition control request signal OFF.

### Details
Cycle start was carried out without reset after the retract in direct command mode.

**Remedy**
- Finish the machining for now by resetting the NC.
<table>
<thead>
<tr>
<th>M01</th>
<th>No speed set out of soft limit</th>
<th>0160</th>
</tr>
</thead>
</table>
| Details | [No speed set out of soft limit]  
The axis, without any maximum speed outside of the soft limit range set, was returned from the outside of the soft limit range.  
[Aux ax sta No. illegal]  
A station No. exceeding the No. of indexed divisions was designated. |
| Remedy | [No speed set out of soft limit]  
• Correct the parameter "#2021 out_f" (Maximum speed outside soft limit range) setting.  
• Correct the soft limit range (with the parameter "#2013 OT-" (Soft limit I-) and "#2014 OT+" (Soft limit I+)).  
[Aux ax sta No. illegal]  
• Correctly designate the station No. |
| M01 | Aux ax R-pnt ret incomplete | 0161 |
| Details | Automatic/manual operation was started before reference position return was executed with the incremental system. |
| Remedy | • Execute the reference position return. |

| Details | The start signal was input while initializing the absolute position reference point. |
| Remedy | • Complete the absolute position reference point initialization. |
| M01 | Aux ax abs position error | 0163 |
| Details | The start signal was input during an absolute position alarm. |
| Remedy | • Initialize the absolute position reference point and then fix the absolute position coordinates. |
| M01 | Aux ax arbitrary positioning | 0164 |
| Details | The manual operation mode was started during the random positioning mode. |
| Remedy | • Turn the random positioning mode OFF before switching to the manual operation mode. |
| M01 | Aux uneven index sta No. ilgl | 0165 |
| Details | The commanded station No. was higher than 20 or the number of indexing stations during uneven indexing.  
The station No.0 was specified during uneven indexing. |
| Remedy | • Check the commanded station No. and the parameter "#12801 aux_station" setting. |
| M01 | Aux axis changeover error | 0166 |
| Details | One of the following attempts was made on an axis that is switchable between NC axis and auxiliary axis.  
• A command intended for an NC axis in manual mode was issued to an auxiliary axis.  
• NC axis control select signal was turned OFF while the NC axis was in motion.  
• NC axis control select signal was turned ON while the auxiliary axis was in motion. |
| Remedy | • If you wish to issue a command intended for an NC axis in manual mode, turn ON the NC axis control select signal so as to set the axis as an NC axis.  
• Do not change NC axis control select signal while the axis is in motion. |

## 1 Operation Errors (M)

### 1.01 Rotary axis para unswitchable 0187

**Details**

The rotary axis configuration parameter switch request signal has turned ON for a part system where any of the following modes is active.

- Tool center point control mode
- Inclined surface machining mode
- Workpiece installation error compensation mode
- Tool axis direction tool length compensation mode
- Simple inclined surface machining mode
- 3D radius compensation mode
- 3D manual feed
- Tool handle feed & interruption
- R-Navi mode

**Remedy**

- Cancel the alarm by NC reset or by turning OFF the rotary axis configuration parameter switch request signal.

### 1.02 Interference check disabled 0200

**Details**

3D machine interference check is disabled. This alarm is output to NC alarm 5.

**Remedy**

- Enable all the interference check settings.
- If there is any axis which has not completed zero point return, establish the zero point first.

### 1.03 Machine interference 1 0201

**Details**

It was judged that an interference occurred in the No.1 step interference check and caused a deceleration stop. When machine interference is detected, the interfered part is highlighted (yellow/red) and the part's name is displayed on the 3D monitor's model display.

**Remedy**

- Move the axis in a direction which does not cause interference.
- Press RESET to cancel the alarm.
- (In manual operation)
  
  You can move the axis in the same travel direction as before the interference. But the axis movement is done using the 2nd step interference check distance.

### 1.04 Machine interference 2 0202

**Details**

It was judged that an interference occurred in the No.2 step interference check and caused a deceleration stop. When machine interference is detected, the interfered part is highlighted (red) and the part's name is displayed on the 3D monitor's model display.

**Remedy**

- Move the axis in a direction which doesn't cause interference.
- Press RESET to cancel the alarm.

### 1.05 Tool interfer. check disabled 0205

**Details**

Tool interference check has been disabled.

This alarm is output to the NC alarm 5.

**Remedy**

- Turn ON the [Tool check] menu of 3D monitor.
- Set the tool data.
- If you prevent an alarm from being output while the tool interference check is disabled, set "0" in "#1100 3D_MChk_ToolAlm".
### M01 Too many simul. control axes 0211

**Details**
The given command has caused any axis other than those commanded to move. So the total number of axes to move has exceeded the maximum number of simultaneous contour control axes.

**Remedy**
- Check the maximum number of simultaneous contour control axes of your NC.
- Check the machining program to make sure the total number of axes to move will not exceed the maximum number of simultaneous contour control axes.

### M01 Changing prg format disabled 0215

**Details**
The PFCHR signal has been switched (from ON to OFF or OFF to ON) during automatic operation.

**Remedy**
- Use G188 to change the program format during automatic operation.
- * The warning display is cancelled by changing PFCHR back to the previous state.

### M01 Multi ax for 3D manual feed 0230

**Details**
More than one axis was designated in manual mode while the 3-dimensional manual feed was valid.

**Remedy**
- Command the manual feed to each axis one by one.

### M01 3D manual feed coord sys err 0231

**Details**
- More than one of the three bits for selecting hypothetical coordinate system was turned ON.
- Virtual coordinate system was selected while the 3-dimensional manual feed was invalidated by the parameter setting.
- The manual tool length measurement or workpiece position measurement is being attempted.

**Remedy**
- Check the sequence program.
- Enable 3-dimensional tool radius compensation (set the parameter "#7912 NO_MANUAL" to "0").
- Finish the manual tool length measurement or workpiece position measurement.

### M01 Illegal op in 3D tool R comp 0232

**Details**
An illegal operation (such as manual interrupt) was attempted during 3-dimensional tool radius compensation (tool vertical direction compensation).

**Remedy**
- Operations such as manual interrupt are disabled while 3-dimensional tool radius compensation (tool vertical direction compensation) is being performed.

### M01 Coord select w/o 3D man. Feed 0233

**Details**
Hypothetical coordinate system has been selected although 3D manual feed is not included in the specifications.

**Remedy**
- Turn OFF all the 3D manual feed coordinate system selection signals (including MJCT).

### M01 No spec: Rot center error comp 0240

**Details**
No option of rotation center error compensation is found.

**Remedy**
- Check the specifications.
### M01 Rot center err comp excessive 0241

**Details**
- The calculated compensation amount was excessive, thus the amount was clamped to +/- 1mm.

**Remedy**
- Check the values of the position deviation and the angle deviation.

### M01 Unable to start measuring err 0245

**Details**
- You executed cycle start while measurement of rotation center error or workpiece installation error is invalid.

**Remedy**
- Execute cycle start for one part system that is ready for measurement.
- Activate memory mode before executing cycle start.

### M01 Invalid op mode in err measure 0246

**Details**
- You switched the operation to any mode other than memory during measurement of rotation center error or workpiece installation error.

**Remedy**
- Switch the operation to memory mode.
- Manual interruption, automatic operation handle interruption, MDI interruption, etc. are invalid during error measurement.
- Execute cycle start after completion or cancel of the measurement.

### M01 Machining surface operation disabled 0250

**Details**
- Machining surface operation (selection, indexing or cancel) was attempted while the operation is disabled.

**Remedy**
- Cancel the other modes so that the inclined surface machining command (G68.2), tool axis direction control (G53.1) and the inclined surface machining cancel command (G69) can be issued.
- Wait until the axes stop completely (until the smoothing for all axes reaches zero).
- Perform operation search for machining programs.

### M01 Ax travel n/a in manual index 0251

**Details**
- Moving a rotary axis was attempted during manual machining surface indexing, when a manual operation mode other than handle mode was selected.

**Remedy**
- Change the operation mode to a handle mode before carrying out the manual surface indexing.

### M01 Tool length compensation amt 0 0252

**Details**
- The tool length compensation amount for performing the R-Navi indexing type 2 is 0.

**Remedy**
- Set the tool length compensation amount for performing the indexing type 2 to a value other than 0.

### M01 Feat coord ill w/ multi-handle 0253

**Details**
- Manual feed feature coordinate system was selected while two or more handles were ON.

**Remedy**
- Manual feed on a feature coordinate system is disabled while two or more handles are enabled (*).
- Press [Manual coord] and select the machine coordinate system.
- Reduce the number of enabled handles (*) to one.
- (*) An enabled handle means the handle for which "Nth handle valid" signal (HSnS) is ON.
### M01 No spec: Spatial error comp 0260

**Details**
The spatial error compensation option is not available.

**Remedy**
Check the specifications.

### M01 Spatial error comp excessive 0261

**Details**
The compensation amount is outside the setting range.
Due to the calculation of the excessive amount, it is clamped by +/-1mm.

**Remedy**
Set the compensation amount within the setting range.

### M01 Auto backlash adjust illegal 0270

**Details**
- A measurement condition adjustment or backlash adjustment was attempted to an axis with which automatic backlash adjustment is impossible.
- A measurement condition adjustment or backlash adjustment was attempted even though all the axes had not reached the 1st reference position.
- The operation mode is other than memory mode.
- The slave axis of synchronous control is selected as adjustment axis.
- An attempt has been made to start an adjustment by cycle start.

**Remedy**
- Check the adjustment axis.
- Start the adjustment after all the axes return to the 1st reference position.
- Check the operation mode.
- Select the master axis of synchronous control as adjustment axis when adjusting the slave axis.
- Start the adjustment by automatic backlash adjustment start signal.

### M01 Operating auto backlash adjust 0271

**Details**
An illegal operation was attempted during measurement condition adjustment or backlash adjustment.

**Remedy**
- Continue the operation after canceling the measurement condition adjustment and backlash adjustment.

### M01 APLC password mismatch 0280

**Details**
The APLC authentication password is inconsistent.

**Remedy**
- Contact the machine tool builder.

### M01 High-cycle sampling disabled 0290

**Details**
- The drive unit's hardware or software does not conform to the high-cycle sampling mode.
- High-cycle data are not used even when high-cycle sampling has been set.
- High-cycle sampling was attempted while the axis targeted for high-cycle sampling was moving.
- High-cycle sampling was attempted during speed monitor mode.
- High-cycle sampling was attempted while any of the following operations is being executed: Dog-type zero point return, absolute position setting, synchronous tapping, spindle synchronization, hobbing, tool spindle synchronization IC.

**Remedy**
- The software or hardware does not conform to the function. Contact service center.
- Set data for high-cycle sampling.
- Execute high-cycle sampling after stopping the axis targeted for high-cycle sampling.
- Execute high-cycle sampling after cancelling the speed monitor mode.
- Execute high-cycle sampling after stopping the currently executed functions.
1 Operation Errors (M)

**Details**

- An attempt to activate "Speed monitor mode" was made during the high-cycle sampling mode.
- An attempt to change the gear signal was made during the high-cycle sampling mode.
- An attempt to execute spindle orientation was made during the high-cycle sampling mode.
- Spindle detach was attempted during the high-cycle sampling mode.
- Any of the following operations was attempted during the high-cycle sampling mode: Dog-type zero point return, absolute position setting, spindle/C axis changeover, synchronous tapping, spindle synchronization, hobbing, or tool spindle synchronization IC.

**Remedy**

- Change the speed monitor mode signal back, finish high-cycle sampling, and then select the speed monitor mode.
- Change the gear signal back, finish high-cycle sampling, and then change the gear.
- Change the spindle orientation signal back, finish high-cycle sampling, and then execute orientation.
- Change the spindle detach signal back, finish high-cycle sampling, and then carry out spindle detachment.
- Execute the operation after terminating high-cycle sampling.

**Details**

A function which is unavailable during parameter write was commanded.

- Spindle/C axis changeover
- Speed observation mode signal ON
- High-speed synchronous tapping
- PLC axis indexing

**Remedy**

- Cancel the write of the parameter.
- Command the following functions after the parameter write is completed.
  - Spindle/C axis changeover
  - Speed observation mode signal ON
  - High-speed synchronous tapping
  - PLC axis indexing

**Details**

Z phase detection has failed to be completed during execution of proximity-switch orientation.

**Remedy**

- Check for a failure of the proximity switch.

**Details**

- A machine command was issued to the superimposed axis.
- Reference position return was attempted on the superimposed axis.
- Skip command was issued to the reference or superimposed axis.
- Dog-type reference position return was attempted on the reference axis.

**Remedy**

- Correct the program.
### Operation Errors (M)

**M01 Superimposition command illegal 1004**

**Details**
- Superimposition start command was issued to the axis which was in any of the following states.
  - Synchronization control
  - Milling interpolation
  - Feed-forward thread cutting control
- Superimposition start command was issued to the axis which was under superimposition control.
- Superimposition start command was issued to an axis that belongs to the same part system as a reference or synchronized axis of control axis synchronization between part systems.

**Remedy**
- Correct the program.
- Turn OFF the feed-forward control request signal.

**M01 G114.n command illegal 1005**

**Details**
- G114.n has been commanded during the execution of G114.n.
- G51.2 has been commanded when G51.2 spindle-spindle polygon machining mode has been already entered at another part system.
- Multiple spindle synchronization set command is illegal.

**Remedy**
- Command G113 to cancel the operation.
- Turn ON the "spindle synchronization cancel" signal (Y18B8: SPSYC) to cancel the operation.
- Command G50.2 to cancel the operation.
- Turn ON the "spindle-spindle polygon cancel" signal (YCD1) to cancel the operation.
- Correct the program.

**M01 Spindle in-use by synchro tap 1007**

**Details**
- The spindle is being used in synchronized tapping.

**Remedy**
- Cancel the synchronized tapping.

**M01 GB spindle synchro signal OFF 1014**

**Details**
- A forward run, reverse run, orientation, synchronous tapping, spindle synchronization, tool spindle synchronization I, tool spindle synchronization II or C-axis servo ON command was issued to the reference spindle while the guide bushing spindle synchronization signal was OFF.
- The guide bushing spindle synchronization signal was turned OFF during a forward run, reverse run, orientation, synchronous tapping, spindle synchronization, tool spindle synchronization I, tool spindle synchronization II or C-axis servo ON command.
- Orientation was commanded during the "guide bushing spindle synchronization" signal ON with spindle zero point detection with proximity switch and turret indexing enabled.
- C axis servo ON was commanded during the "guide bushing spindle synchronization" signal ON with spindle C axis parameter change enabled.

**Remedy**
- Check the ladder program.
- Check the parameters.

**M01 GB SP sync:Spindle type error 1015**

**Details**
- An analog spindle analog spindle is used for the master spindle or the guide bushing spindle.
- Spindle-mode servo is used for the master spindle or the guide bushing spindle.
- Turret gear change control valid spindle is used for the master spindle or the guide bushing spindle.

**Remedy**
- Check the parameters.
- Change the reference spindle or the guide bushing spindle to spindle drive unit.
- Change the reference spindle or the guide bushing spindle to turret gear change control invalid.
1 Operation Errors (M)

M01 GB SP sync:Phase mem sgnl ilgl 1021
Details
- The guide bushing spindle synchronization phase memory signal was turned ON while the master spindle or guide bushing spindle was rotating.
- The guide bushing spindle synchronization phase memory signal was turned ON while the guide bushing spindle synchronization signal was OFF.
Remedy
- Check the ladder program.

M01 GB SP sync:Phase set sgnl ilgl 1022
Details
- The guide bushing spindle synchronization phase alignment signal was turned ON while the master spindle or guide bushing spindle was stopped.
Remedy
- Check the ladder program.

M01 GB SP sync:Z phase not pass 1023
Details
- When the guide bushing spindle synchronization phase memory signal was ON, the master spindle or guide bushing spindle’s Z-phase was not passed.
Remedy
- Check the ladder program.

M01 Cmd impsbi in spindle rtry ax 1024
Details
Toward the synchronous tapping spindle, the switch to servo-mode is commanded to the spindle-mode rotary axis.
The spindle-mode rotary axis in servo-mode is commanded as the synchronous tapping spindle.
Remedy
- Switch to the spindle-mode rotary axis.

M01 Other cmnd disabled in orient. 1025
Details
- Spindle superimposition control command has been given to an orientation mode spindle with the said spindle treated as either the reference or superimposed spindle.
- Orientation command has been given to the reference or superimposed spindle that is under spindle superimposition control.
Remedy
- Cancel the orientation mode.
- Use G113 or the “Spindle sync cancel” signal to cancel spindle superimposition.

M01 SP-C ax ctrl runs independntly 1026
Details
- C axis mode command has been issued for polygon machining spindle.
- C axis mode command has been issued for synchronized tapping spindle.
- Polygon command has been issued for synchronized tapping spindle.
- Spindle is being used as spindle/C axis.
Remedy
- Cancel the C axis command.
- Cancel the polygon machining command.
- Cancel the C axis with servo OFF.
Details
- The lead axis for thread recutting is not present in a thread recut enabled part system.
- A variable lead thread cut command has been given in the first thread cut block of thread recutting.

Remedy
- Thread recutting is not supported. Disable thread recutting or press RESET to cancel the alarm, and correct the program.

Details
- A variable lead thread cut command has been given in the first thread cut block of thread recutting.

Remedy
- Thread recutting is not supported. Disable thread recutting or press RESET to cancel the alarm, and correct the program.

Details
- The lead axis and spindle for thread cutting are different from those predetermined.

Remedy
- Disable thread recutting or press RESET to cancel the alarm, and correct the settings of lead axis and spindle.

Details
- "#8045 Varying spd thread" has been set to "1" to issue a variable speed thread cut command even though the function is not included in the specifications.
- A variable speed thread cut command has been given while the feed axis acceleration/deceleration type is soft acceleration/deceleration.
- A variable speed thread cut command has been given while the spindle encoder signal is not sent via serial input.
- A variable speed thread cut command has been given even though the spindle, lead axis or plane composing axes are controlled by drive other than MDS-E Series.
- The spindle intended for thread cutting is executing synchronous tapping, spindle synchronization, guide bushing spindle synchronization or spindle/C axis control.

Remedy
- Check the specifications.
- Check the parameters.
- Check the program.
- Check the Encoder selection signal (R register).

Details
- Different M codes were each commanded as synchronization M code in each of the two part systems. Synchronization with the "T" code was commanded in another part system during M code synchronization. Synchronization with the M code was commanded in another part system during synchronization with the "T" code.

Remedy
- Correct the program so that the M codes match.
- Correct the program so that the same synchronization codes are commanded.

Details
- Tap retract has been executed with a different spindle selected. Cutting feed is in wait state until synchronization is completed.

Remedy
- Select the spindle for which tap cycle was halted before turning ON the "tap retract" signal.
## 1 Operation Errors (M)

### M01 Sp-Sp polygon cut interlock 1033

**Details**
Cutting feed is in wait state until synchronization is completed.

**Remedy**
- Wait for the synchronization to end.

### M01 Mixed sync ctrl prmtr illegal 1034

**Details**
There is a mistake in the settings of mixed control axis parameters (crsax [1] to [8]).
Mixed control was attempted within one and the same part system.
Any of the parameter settings is disabling mixed control.

**Remedy**
- Check the parameter settings for mixed synchronization control.

### M01 Mixed sync ctrl disable modal 1035

**Details**
Mixed synchronization control was commanded for a part system in which mixed synchronization control is disabled as shown below.
- During nose R compensation mode
- During pole coordinate interpolation mode
- During cylindrical interpolation mode
- During balance cut mode
- During fixed cycle machining mode
- During facing turret mirror image
- During constant surface speed control mode
- During hobbing mode
- During axis name switch
- During interference check III alarm (interference detection, interference alarm area intrusion or interference warning area intrusion)

An axis was transferred to another part system, and mixed control was attempted with the part system's maximum number of control axes exceeded.

An axis was removed from the part system, and mixed control was attempted with the part system's number of axes zero.

Another axis exchange was attempted to the axis which was already transferred to another part system for mixed control.

Mixed control was attempted with an axis of a part system not in automatic operation.

**Remedy**
- Correct the program.

### M01 Synchro ctrl setting disable 1036

**Details**
"Synchronous control operation method" was set (with R2589) when the mode was not the C axis mode.
"Synchronous control operation method" was set (with R2589) in the zero point not set state.
Mirror image is disabled.
External mirror image or parameter mirror image was commanded during facing turret mirror image.
You have set the "Synchronous control operation method" (R2589) of multiple axis synchronization, although the multiple axis synchronization control cannot be used.

**Remedy**
- Set the contents of the R2589 register to "0".
- Correct the program and parameters.

### M01 Synchro start/cancel disable 1037

**Details**
Synchronous control start/cancel command was issued when the start/cancel is disabled.

**Remedy**
- Correct the program and parameters.

</table>
### M01 Intrf check across sys: Alarm  1052

**Details**
A command has been given that causes the interfering objects to collide each other.

**Remedy**
- Correct the program.

### M01 Interfe chk 0pt return incomp  1053

**Details**
Interference check between part systems had started while zero point return of the part system set interfering object has not completed.

**Remedy**
- Turn OFF the interference check valid signal, and complete zero point return in the all part systems set interfering object.

### M01 Coil switch duration excess  1057

**Details**
Coil switch operation was not completed within the following time:
SP114 (#13114) × MKT_Rate (#11760)/100.

**Remedy**
- Check and, if necessary, modify the following parameters: "#13114 SP114" (Coil changeover gate cutoff timer) and "#11760 MKT_Rate" (Threshold percentage for monitoring coil switch duration).
- Check for a welded contactor.
This alarm can be cancelled after execution of emergency stop.

### M01 Feed-forward control disabled  1060

**Details**
Feed-forward control was attempted while any of the following functions was enabled.
- Control axis superimposition I/II
- Control axis synchronization between part systems I/II

**Remedy**
- Turn OFF the feed-forward control request signal.

### M01 Superimposition axis param err  1070

**Details**
- Cutting feed clamp rate is unspecified for a superimposition-related axis. Or the specified rate is outside the setting range.
  "#2091 plclamp", "#2629 pl3clamp" or "#2630 pl3clamp2"
- Rapid traverse rate is unspecified for a superimposition-related axis.
  Or the specified rate is outside the setting range.
  "#2090 pirapid", "#2621 pirapid2",
  "#2626 pl3rapid", "#2627 pl3rapid2" or "#2628 pl3rapid3"

**Remedy**
- Set the cutting feed clamp rate of the superimposition-related axis within the setting range.
- Set the rapid traverse rate of the superimposition-related axis within the setting range.
Details
Tool retract and return command has been given in any of the following modes:

- Mixed control (Cross axis control) I
- Mixed control (Cross axis control) II
- Control axis synchronization between part systems I
- Control axis synchronization between part systems II
- Control axis superimposition I
- Control axis superimposition II
- Arbitrary axis superimposition control
- Tool spindle synchronization IA (spindle - spindle polygon)
- Tool spindle synchronization IB (spindle - spindle polygon)
- Tool spindle synchronization IC (spindle - NC axis polygon)
- Tool spindle synchronization II (hob)
- Spindle superimposition control

Remedy
Turn OFF the transit point designation signal.

Details
The axis declared in the arbitrary axis exchange command is incapable of being exchanged.

Remedy
• Correct the program (mainly check the processing timing).

Details
A manual travel command has been given to the axis being exchanged when manual interruption is disabled under cross machining control (when 

Remedy
• This error can be cancelled by either one of the following operations.
  1: Cancel the manual travel command
  2: Reset the NC

Details
• Arbitrary axis superimposition command has been issued in any part system other than the one that contains either the reference or superimposed axis of arbitrary axis superimposition control.
• Arbitrary axis superimposition cancel command has been issued in any part system other than the one that contains the superimposed axis of arbitrary axis superimposition control.

Remedy
• Correct the program so that the arbitrary axis superimposition command is given in an appropriate part system.

Details
The actual spindle speed has fluctuated exceeding the allowable range, while spindle speed fluctuation detection (G162) is active.

The number following "S", which is output together with this alarm, indicates the spindle where speed fluctuations were detected.

Remedy
• Unnecessarily large load may be applied to the spindle during automatic operation.
  Reduce the spindle load.
• To prevent this alarm from being output during spindle speed fluctuation detection (G162), set the parameter #1242 set14 BIT2 to ON.
1 Operation Errors (M)

**M01  Sp synchro phase calc illegal**

Details
Spindle synchronization phase alignment command was issued while the "phase shift calculation request" signal was ON.

Remedy
• Correct the program.
• Correct the sequence program.

**M01  Illegal cmd in SP oscillation**

Details
A function that cannot be used with spindle oscillation was commanded during spindle oscillation.

Remedy
• Command the function after finishing spindle oscillation.

**M01  SP oscillation cmd illegal**

Details
Spindle oscillation was commanded during executing a function that cannot be used with spindle oscillation.

Remedy
• Command spindle oscillation after finishing the function that cannot used with spindle oscillation.

**M01  SP oscillation set val illegal**

Details
Spindle oscillation was commanded while a value out of range is set as spindle oscillation amplitude or spindle oscillation frequency.

Remedy
• Check the setting values of the amplitude and frequency.

**M01  Sub part system I call error**

Details
• Sub part system control I command (G122) has been given to a part system where the sub part system I operation mode is deactivated.
• Sub part system control I command (G122) has been given to a part system which is not reserved as the sub part system in M80.

Remedy
• Activate the sub part system I operation mode for the sub part system before issuing G122.
Part systems marked "SUB" on the monitor screen are under the sub part system I operation mode.
• Command the sub part system start to the sub part system which is reserved with "#1483 SBS1_sys num" for M80.

**M01  Sub part system II start error**

Details
When the sub part system control II has been commanded, no part system is left capable of being activated as a sub part system.

Remedy
• Do not exceed the maximum number of simultaneously activatable sub part systems when commanding G144.
• Set the parameter #1437 SBS2_Spec BIT0 to 0 if you wish to wait until the sub part system becomes capable of being activated.

**M01  Constant surface speed rdndnt**

Details
• Constant surface speed is commanded from other part system to the spindle that is in the thread/ thread cycle or the tapping cycle/ synchronous tapping cycle.
• To the spindle in constant surface speed control, the thread/ thread cycle or the tapping cycle/ synchronous tapping cycle are commanded from other part system.

Remedy
• Check the program.
1 Operation Errors (M)

M01 Constant torque disabled

Details
• Constant torque control is commanded to the axis which the parameter "#2296 SV096(TQC)" (Constant torque control: Stopper-direction torque) setting is "0".
• Constant or proportional torque stopper control is commanded to the axis which is in movement by automatic or manual operation.
• Constant torque control is canceled to the constant torque control axis in movement by automatic or manual operation.
• Constant torque control is commanded to the proportional torque stopper control axis.
• Constant torque control is commanded again during the axis movement by constant torque control cancel.
• Constant torque control axis is at stroke limit or H/W stroke end.

Remedy
• Check the program.
• Check the sequence program.

M01 P torque stopper disabled

Details
• Proportional torque stopper control is commanded to the axis which the parameter "#2296 SV096(TQC)" (Constant torque control: Stopper-direction torque) setting is "0".
• Proportional torque stopper control is commanded to the axis which is in movement by automatic or manual operation.
• The axis movement is commanded to the axis which is in the proportional torque constant control.
• Proportional torque constant control is commanded again during the axis movement by proportional torque constant control cancel.
• Proportional torque constant control axis is at stroke limit or H/W stroke end.

Remedy
• Check the program.
• Check the sequence program.

M01 Droop cancel disabled

Details
• Constant torque control droop cancel is commanded to the axis which is not in the constant/ proportional torque control.
• Constant torque control droop cancel is commanded to the axis in movement by automatic or manual operation.

Remedy
• Check the program.
• Check the sequence program.

M01 Cmdn disabled in droop cancel

Details
The axis movement by automatic or manual operation is commanded to the axis which the constant torque control droop is being canceled.

Remedy
• Check the program.
• Check the sequence program.

M01 SP equivalent load factor over

Details
The equivalent load factor of the spindle motor has exceeded the set threshold that causes the excess warning.

Remedy
• Change the operation pattern in a way that decreases the spindle motor load.
Differential tap command has been given although any rotation command has not been input to the reference spindle that is under spindle superimposition control.

Remedy
• Cancel the synchronous tapping cycle.

A tap cycle or synchronous tap cycle command given to the superimposed spindle has caused the spindle's actual rotation speed to exceed the spindle clamp speed.

Remedy
• Correct the spindle rotation speed in synchronous tap cycle.

Spindle synchronization cancel command has been issued during rotation of C axis under spindle sync C axis control.

Remedy
• This operation error is cancelled when C axis stops. Issue a spindle sync cancel command after C axis has stopped.
• Use G113D or G113H to cancel the spindle synchronization.

The guide bushing spindle synchronization temporary cancel signal was turned ON/OFF when the master spindle and the guide bushing spindle were in one of the following modes.

Remedy
• Check the ladder program.

The reference spindle was commanded as a spindle related to tool spindle synchronization IC (polygon).

Remedy
• Check the program.
### M01 Details

**Error:** The following operation was performed to an axis which can be switched over between NC axis and PLC axis.

**Remedy:**
- Make sure the axis switchover status signal is OFF and change the ON/OFF of the axis switchover signal.

### M01 Details

**Error:** You have set the R register for selecting synchronous control operation method, although the option of multiple axis synchronization control is OFF.

**Remedy:**
- Set 0 in R2589 (Synchronous control operation method selection).

### M01 Details

**Error:** For the multiple axis synchronization control, you selected two or more slave axes without selecting any master axis.

**Remedy:**
- Correct the setting of R2589 (Synchronous control operation method selection).

### M01 Details

**Error:** The following operation was performed to an axis which can be switched over between NC axis and PLC axis.

**Remedy:**
- Make sure the axis switchover status signal is OFF and change the ON/OFF of the axis switchover signal.

### M01 Details

**Error:** You have set the R register for selecting synchronous control operation method, although the option of multiple axis synchronization control is OFF.

**Remedy:**
- Set 0 in R2589 (Synchronous control operation method selection).

### M01 Details

**Error:** The following operation was performed to an axis which can be switched over between NC axis and PLC axis.

**Remedy:**
- Make sure the axis switchover status signal is OFF and change the ON/OFF of the axis switchover signal.

### M01 Details

**Error:** You have set the R register for selecting synchronous control operation method, although the option of multiple axis synchronization control is OFF.

**Remedy:**
- Set 0 in R2589 (Synchronous control operation method selection).

### M01 Details

**Error:** The following operation was performed to an axis which can be switched over between NC axis and PLC axis.

**Remedy:**
- Make sure the axis switchover status signal is OFF and change the ON/OFF of the axis switchover signal.

### M01 Details

**Error:** You have set the R register for selecting synchronous control operation method, although the option of multiple axis synchronization control is OFF.

**Remedy:**
- Set 0 in R2589 (Synchronous control operation method selection).

### M01 Details

**Error:** The following operation was performed to an axis which can be switched over between NC axis and PLC axis.

**Remedy:**
- Make sure the axis switchover status signal is OFF and change the ON/OFF of the axis switchover signal.

### M01 Details

**Error:** You have set the R register for selecting synchronous control operation method, although the option of multiple axis synchronization control is OFF.

**Remedy:**
- Set 0 in R2589 (Synchronous control operation method selection).
1 Operation Errors (M)

Details
A command has been given that causes two or more objects to interfere with each other.

yy : Interference object definition number (1)
zz : Interference object definition number (2)

Remedy
• Cancel the alarm with reset.
• Disable the interference check III mode first before moving the interfering object further in the interference direction.

Details
Two or more interfering objects are in the interference alarm area.

yy : Interference object definition number (1)
zz : Interference object definition number (2)

Remedy
• Disable the interference check III mode before moving.
• Check the interference definition and the interference selection.

Details
A command has been given that causes two or more interfering objects to enter the interference warning area.

yy : Interference object definition number (1)
zz : Interference object definition number (2)

Remedy
• Interfering objects are in the interference warning area.
If an operational problem is expected to occur, stop moving the axes with feed hold, cancellation of manual axis movement or reset.

Details
You attempted to turn ON the interference check III mode with the interfering object data disabled.

Remedy
• Execute the interference data ON command to enable the interference data before turning ON the interference check III mode.

Details
The total number of solid objects used as interfering object has exceeded the maximum.

Remedy
• The total number of interfering solid objects set in the system variable or R register has exceeded the maximum. Correct the setting.

Details
The allowable process time for interference check III has been exceeded.

Remedy
• Turn OFF the interference check III mode.
• Correct the interfering object definition.

### M03 Interf. selection: offset over 3001 Interference object definition number

**Details**
In the interfering object selection, the interfering object model coordinate system offset 1 has exceeded the setting.

**Remedy**
- Correct the setting of the interfering object model coordinate system offset 1 in the interfering object selection.

### M03 Interf.:rot objects comb. error 3002 Interference object definition number

**Details**
The following selection was made for the rotary interfering objects:
- You selected a one-rotary-axis object and two-rotary-axis object at a time.
- You selected two or more two-rotary-axis objects.

**Remedy**
- Correct the setting of the n-th interfering object selection.

### M50 Workpiece offset unreflected 5000

**Details**
Any of the following offsets of the selected modal has not been reflected in the workpiece position counter: workpiece offset, extended workpiece offset, external workpiece offset or workpiece shift.

**Remedy**
The warning is cancelled by any of the following operations.
- Cycle start
- Reset
- Emergency stop

### M90 Parameter set mode

**Details**
The setup parameter lock is released. Cycle start is disabled when setup parameters can be set.

**Remedy**
- Refer to the manual issued by the machine tool builder.

### M97 Maintenance part activated

**Details**
Activated maintenance part has not completed the product procedures.

**Remedy**
- Contact our service center.
Stop Codes (T)
2 Stop Codes (T)

### T01 Axis in motion

**Details**  
Automatic start is not possible as one of the axes is moving.

**Remedy**  
- Try automatic start again after all axes have stopped.

### T01 NC not ready

**Details**  
Automatic start is not possible as the NC is not ready.

**Remedy**  
- Another alarm has occurred. Check the details and remedy.

### T01 Reset signal ON

**Details**  
Automatic start is not possible as the "reset" signal has been input.

**Remedy**  
- Turn OFF the "reset" signal.
- Check for any failure of the reset switch which has caused the switch's continuous ON.
- Correct the sequence program.

### T01 Auto operation pause signal ON

**Details**  
The feed hold switch on the machine operation panel is ON (valid).

**Remedy**  
- Correct the feed hold switch setting.
- The feed hold switch is B contact switch.
- Fix any broken wires in the feed hold signal line.
- Correct the sequence program.

### T01 H/W stroke end axis exists

**Details**  
Automatic start is not possible as one of the axes is at the stroke end.

**Remedy**  
- Manually move any axis whose end is at the stroke end.
- Check for any broken wires in the stroke end signal line.
- Check for any failure in the stroke end limit switch.

### T01 S/W stroke end axis exists

**Details**  
Automatic start is not possible as one of the axes is at the stored stroke limit.

**Remedy**  
- Move the axis manually.
- If the axis's end is not at the stroke end, check the parameters.

### T01 No operation mode

**Details**  
The operation mode has not been selected.

**Remedy**  
- Select automatic operation mode.
- Check for any broken wires in the signal line for automatic operation mode (memory, tape, MDI).
### T01 Operation mode duplicated 0108

**Details**
Two or more automatic operation modes have been selected.

**Remedy**
- Check for any short circuit in the mode (memory, tape, MDI) selection signal line.
- Check for any failure in the switch.
- Correct the sequence program.

### T01 Operation mode changed 0109

**Details**
The automatic operation mode has changed to another automatic operation mode.

**Remedy**
- Return to the original automatic operation mode, and execute automatic start.

### T01 Tape search execution 0110

**Details**
Automatic start is not possible as tape search is being executed.

**Remedy**
- Wait for the tape search to be completed and then execute the automatic start.

### T01 Cycle start prohibit 0111

**Details**
Automatic start is disabled because restart search is in execution.

**Remedy**
- Execute automatic start after the restart search is completed.

### T01 CNC overheat 0113

**Details**
Automatic start is not possible because a thermal alarm (Z53 CNC overheat) has occurred.

**Remedy**
- Temperature of the control unit has exceeded the specified temperature.
- Take appropriate measures to cool the unit.

### T01 Cycle st. prohibit(Host comm.) 0115

**Details**
Automatic start cannot is not possible because the NC is communicating with the host computer.

**Remedy**
- Wait for the communication with host computer to be ended and then execute the automatic start.

### T01 Cycle st prohibit(Battery alm) 0116

**Details**
Automatic start is not possible because the voltage of the battery in the NC control unit has dropped.

**Remedy**
- Replace the battery of the NC control unit.
- Contact the service center.

### T01 R-pnt offset value not set 0117

**Details**
Automatic operation is not possible because no reference position offset value has been set.

**Remedy**
- Perform the reference position initialization setting, then set "#2034 rfpofs(Distance-coded reference position detection offset)".
Details
• A start signal was input during an absolute position detection alarm.
Remedy
• Clear the absolute position detection alarm, and then input the start signal.

Details
• A start signal was input during zero point initialization in the absolute position detection system.
Remedy
• Complete zero point initialization before inputting the start signal.

Details
Automatic start is disabled because manual measurement is in execution.
Remedy
• Execute automatic start after the manual measurement is completed.

Details
 Cycle start signal was input for the part system that has applied Sub-part system I operation mode.
Remedy
• Use Sub-part system I operation mode signal to switch whether to start the operation as Sub-part system control or to execute cycle start as Main-part system.

Details
Machining interruption related functions cannot be started up.
Remedy
• To resume the retraction, confirm that retraction is enabled (the "Retraction executable" signal is ON).
• To resume the operation from the state of being stopped at a certain block of the retraction program, activate the memory mode and turn ON the "Retraction start" signal.
• Check the sequence program to make sure that multiple start signals are not input at the same time.

(Note) The remedies stated above apply not only to retraction but also to the other machining interruption-related functions. (The start signals and ready states are replaced with those for each function.)

Details
Automatic start is disabled because the APLC authentication password is inconsistent.
Remedy
• Contact the machine tool builder.

Details
An automatic operation was started in one of the following machining modes during the safe speed clamp: thread cutting, synchronous tapping, cross machining, superimposition control, tool center point control or SSS control.
Remedy
• Turn ON the safely-limited speed monitoring request signal and press the cycle start button.
• Close the door and press the cycle start button.
T01  Cycle start prohibit (AL Z83)  0172

Details
Cycle start is disabled while the system alarm Z83 (NC started during SP rotation) is occurring.

Remedy
• Turn OFF the power and make sure that the spindle is at a standstill. And then turn the power ON again.

T01  In interference check alarm  0173

Details
Cycle start cannot be operated because interference check alarm is in progress.

Remedy
• Release the interference check alarm before operating the cycle start.

T01  Cycle st forbid (measuring err)  0176

Details
Cycle start cannot be executed for other part systems during measurement of rotation center error or workpiece installation error.

Remedy
Execute cycle start for one part system that is ready for measurement.
Cancel measurement when error measurement is not executed.

T01  Cycle start prohibit (OP error)  0177

Details
Cycle start was executed during operation error where cycle start cannot be executed.

Remedy
After canceling operation error, execute cycle start.

T01  Cycle start prohibit (SBT warn)  0185

Details
Cycle start is disabled because the axis in SBT warning exists in the system.

Remedy
After cancelling the SBT warning, execute the cycle start.

T01  Cycle start prohibit  0190

Details
Automatic start is not possible because the setting of setup parameters is enabled.

Remedy
• Refer to the manual issued by the machine tool builder.

T01  Cycle start prohibit  0191

Details
Automatic start was attempted while a file was being deleted/written.

Remedy
• Wait for the file to be deleted/written and then execute the automatic start.

T01  Cycle st. prohibit (Term exp'd)  0193

Details
Automatic start is not possible because the valid term has been expired.

Remedy
• Obtain a decryption code from the machine tool builder and input it in the NC, then turn the power ON again.

</table>
## T02 Acc/dec time cnst too large 0206

**Details**
The acceleration and deceleration time constants are too large. (This alarm occurs with the system alarm Z59.)

**Remedy**
- Set a larger value for "#1206 G1bF(Maximum speed)".
- Set a smaller value for "#1207 G1btL(Time constant)".
- Set a lower cutting speed.

## T02 Abs posn detect alarm occurred 0215

**Details**
An absolute position detection alarm occurred.

**Remedy**
- Clear the absolute position detection alarm.

## T02 Aux axis changeover error 0220

**Details**
A travel command was issued to an auxiliary axis.

**Remedy**
- Turn ON the "NC axis control selection" signal and press the CYCLE START switch to restart the automatic operation with.

## T02 FEED HOLD: SOS axis 0221

**Details**
SOS axis exists in the system.

**Remedy**
- Cancel SOS state and execute cycle start, and you can continue automatic operation from the stop point.

## T03 Single block stop signal ON 0301

**Details**
The SINGLE BLOCK switch on the machine operation panel is ON. The SINGLE BLOCK or MACHINE LOCK switch changed.

**Remedy**
- Press the CYCLE START switch to resume the automatic operation.

## T03 Block stop cmdn in user macro 0302

**Details**
A block stop command was issued in the user macro program.

**Remedy**
- Press the CYCLE START switch to resume the automatic operation.

## T03 Operation mode changed 0303

**Details**
Automatic mode changed to another automatic mode.

**Remedy**
- Return to the original automatic operation mode, and press the CYCLE START switch to resume the automatic operation.

## T03 MDI completed 0304

**Details**
MDI operation has ended the last block.

**Remedy**
- Set the MDI operation again, and press the CYCLE START switch to start the MDI operation.

</tbody>
</table>
The following Nos. are shown during the operation of the corresponding completion wait factor. The numbers will disappear when the operation is completed. The completion wait factor is indicated with four digits (in hexadecimal).

Display format of completion wait factor
0__ __ __
(a)(b)(c)

Each of the hexadecimal numbers (a), (b) and (c) indicates the following details.

(a)
bit0: In dwell execution
bit3: Unclamp signal wait (Note 1)

(b)
bit0: Waiting for spindle position to be looped
bit3: Door open (Note 2)

(c)
bit0: Waiting for MSTB completion
bit1: Waiting for rapid traverse deceleration
bit2: Waiting for cutting speed deceleration
bit3: Waiting for spindle orientation completion

(Note 1) For type A (#1282 ext18/bit3 = 0)
Waiting for turning ON or OFF of the unclamp finish signal for the index table indexing.
For type B (#1282 ext18/bit3 = 1)
Waiting for turning ON of the unclamp finish signal for the index table indexing.
Waiting for turning ON of the clamp finish signal for the index table indexing.

(*) The complete standby status is established when the unclamp finish and clamp finish signals are both turned ON. Set the clamp finish signal to OFF after performing required process with the PLC.

(Note 2) This shows the door open state caused by the door interlock function.

Remedy
• The parameter "#1342 AlmDly" may be able to postpone displaying a part of an operation alarm, depending on the setting.
This stop code will remain displayed while any alarm is being postponed.
And it will disappear if the postponed alarm is displayed or canceled.
Servo/Spindle Alarms (S)
3.1 Servo Errors (S01/S03/S04)

Servo alarm is displayed in the following format.

<table>
<thead>
<tr>
<th>Axis name</th>

<td>NR (Note 3)</td>
</tr>
<tr>
<td>75</td>
<td>Power supply: Overvoltage</td>
<td>L+ and L- bus voltage in main circuit exceeded the allowable value. As the voltage between L+ and L- is high immediately after this alarm, another alarm may occur if this alarm is reset in a short time. Wait more than 5 min before resetting so that the voltage drops.</td>
<td>NR</td>
</tr>
<tr>
<td>76</td>
<td>Power supply: Function setting error</td>
<td>The rotary switch setting of external emergency stop is not correct, or a wrong external emergency stop signal is input.</td>
<td>AR</td>
</tr>
<tr>
<td>77</td>
<td>Power supply: Power module overheat</td>
<td>Thermal protection function in the power module has started its operation.</td>
<td>PR</td>
</tr>
</tbody>
</table>

(Note 1) If a power supply alarm (60 to 77) occurs, all servos will stop with the dynamic brakes, and all spindles will coast to a stop.
(Note 2) "b", "C" and "d" displayed on the power supply unit’s LED as a solid light (not flickering) do not indicate an alarm.
(Note 3) Check the LED display of the power backup unit to identify what alarm is occurring to the power backup unit.
** Refer to your drive unit’s instruction manual for details.
(Note 4) When the power supply alarm (6F) is detected in the 2nd part system, the reset method differs depending on the detected power supply alarm.
### 3.2 Initial Parameter Errors (S02)

<table>
<thead>
<tr>
<th>S02</th>

<td>The servo parameter setting data is illegal. The alarm No. is the No. of the servo parameter where the error occurred.</td>
<td>Check the descriptions for the appropriate servo parameters and correct them. Refer to &quot;Parameter Numbers during Initial Parameter Error&quot; of each drive unit instruction manual for details.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The number of constants to be used in the following functions is too large: Electronic gears, Position loop gain, Speed feedback conversion.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>When high-speed serial incremental encoder (OSE104, OSE105) is connected, parameters for absolute position are set to ON. Set the parameters for absolute position detection to OFF. To detect an absolute position, replace the incremental specification encoder with an absolute encoder.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>No servo option is found. The closed loop (including the ball screw-end detection) or dual feedback control is an optional function.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>No servo option is found. The SHG control is an optional function.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>No servo option is found. The adaptive filtering is an optional function.</td>
<td></td>
</tr>
</tbody>
</table>
3 Servo/Spindle Alarms (S)

### Details
- Parameter error
- The spindle parameter setting data is illegal.
- The alarm No. is the No. of the spindle parameter where the error occurred.

### Remedy
- Check the descriptions for the appropriate spindle parameters and correct them.
- Even when the parameter is set to a value within the setting range, an error is occurring due to the hardware compatibility or specifications or in relation to several other parameters.
- Refer to "Parameter Numbers during Initial Parameter Error" of each drive unit instruction manual for details.

<table>
<thead>
<tr>
<th>S02</th>
<th>Initial parameter error:PR</th>
<th>13001-13256</th>
<th>(Axis name)</th>
</tr>
</thead>
</table>

---

**S02**

**Initial parameter error:PR**

13001-13256 (Axis name)
### 3.3 Safety Function Errors (S05)

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0001</td>
<td>The STO signal has been input through the CN8 connector.</td>
</tr>
<tr>
<td>0002</td>
<td>STO signal is input by dedicated wiring STO function during servo ON.</td>
</tr>
<tr>
<td>0004</td>
<td>STO signal is illegally input by dedicated wiring STO function during servo OFF. (Illegal input : Signal input state for STO1 and STO2 is mismatched.)</td>
</tr>
<tr>
<td>0006</td>
<td>STO signal is illegally input by dedicated wiring STO function during servo ON. (Illegal input : Signal input state for STO1 and STO2 is mismatched.)</td>
</tr>
</tbody>
</table>

**Remedy**

- Make sure that a short-circuiting connector has been inserted into CN8.
- Refer to the manual of drive unit.
3.4 Parameter Errors (S51)

<table>
<thead>
<tr>
<th>S51 Parameter error</th>
<th>2201-2264</th>
<th>(Axis name)</th>
</tr>
</thead>
</table>

Details
Servo parameter setting data is illegal. The alarm No. is the No. of the servo parameter where the warning occurred.

Remedy
Check the descriptions for the appropriate servo parameters and correct them.

<table>
<thead>
<tr>
<th>S51 Parameter error</th>
<th>13001-13256</th>
<th>(Axis name)</th>
</tr>
</thead>
</table>

Details
Spindle parameter setting data is illegal. The alarm No. is the No. of the spindle parameter where the warning occurred.

Remedy
Check the descriptions for the appropriate spindle parameters and correct them.

Even when the parameter is set to a value within the setting range, an error is occurring due to the hardware compatibility or specifications or in relation to several other parameters.
Refer to "Parameter Numbers during Initial Parameter Error" of each drive unit instruction manual for details.
3.5 Servo Warnings (S52)

Servo warning is displayed in the following format.

```
S O O  □ □ □  □ □  □ □
```

- **Axis name**
  - **Servo**: Axis name
  - **Spindle**: "S1", "S2", "S3", ...
- **Alarm No.**
- **Message**
- **Alarm class**

<table>
<thead>
<tr>
<th>Alarm class</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>S52</td>
<td>Servo warning</td>
</tr>
</tbody>
</table>

The numerical value in the column of "No." in the table after the following page is the double-digit number displayed on the LED which is on the front-side of the drive unit.

At the time of the occurrence of the servo warnings (S52), this number will be displayed in the last two digits of the "alarm number".

(Note) For the troubleshooting at the time of the occurrence of the servo warnings, refer to your drive unit's instruction manual.
(1) Drive unit warning

<table>
<thead>
<tr>
<th>No.</th>
<th>Name</th>
<th>Details</th>
<th>Reset method</th>
<th>Stop method</th>
</tr>
</thead>
<tbody>
<tr>
<td>96</td>
<td>Scale feedback error</td>
<td>An excessive difference in feedback amount was detected between the main side encoder and the MPI scale in MPI scale absolute position detection system.</td>
<td>*</td>
<td>-</td>
</tr>
<tr>
<td>97</td>
<td>Scale offset error</td>
<td>An error was detected in the offset data that is read at the NC power-ON in MPI scale absolute position detection system.</td>
<td>PR</td>
<td>-</td>
</tr>
<tr>
<td>9B</td>
<td>Incremental encoder/magnetic pole shift warning</td>
<td>The difference between the magnetic pole position after the phase Z has been passed (magnetic pole shift amount:SV028) and the initially detected position is excessive in the built-in motor's incremental control system. The magnetic pole is controlled by the initial detection value.</td>
<td>PR</td>
<td>-</td>
</tr>
<tr>
<td>9E</td>
<td>Absolute position encoder: Revolution counter error</td>
<td>An error was detected in the revolution counter data of the absolute position encoder. The accuracy of absolute position is not guaranteed.</td>
<td>*</td>
<td>-</td>
</tr>
<tr>
<td>9F</td>
<td>Battery voltage drop</td>
<td>The battery voltage to be supplied to the absolute position encoder is dropping.</td>
<td>NR</td>
<td>-</td>
</tr>
<tr>
<td>A3</td>
<td>In initial setup of ABS position</td>
<td>This warning is detected until the axis reaches the reference position during the initial setup of the distance-coded reference check function. This warning turns OFF after the axis has reached the position, thus set the value displayed on the drive monitor to the parameter.</td>
<td>PR</td>
<td>-</td>
</tr>
<tr>
<td>A4</td>
<td>Dual signal warning</td>
<td>An input was detected in the signal related to the dual signal. Refer to &quot;Dual signal warning (A4)&quot; for details.</td>
<td>*</td>
<td>-</td>
</tr>
<tr>
<td>A6</td>
<td>Fan stop warning</td>
<td>A cooling fan in the drive unit stopped.</td>
<td>*</td>
<td>-</td>
</tr>
<tr>
<td>E0</td>
<td>Overregeneration warning</td>
<td>Over-regeneration detection level exceeded 80%.</td>
<td>*</td>
<td>-</td>
</tr>
<tr>
<td>E1</td>
<td>Overload warning</td>
<td>A level of 80% of the Overload 1 alarm state was detected.</td>
<td>*</td>
<td>-</td>
</tr>
<tr>
<td>E4</td>
<td>Parameter warning</td>
<td>An incorrect set value was detected among the parameters send from the NC in the normal operation.</td>
<td>*</td>
<td>-</td>
</tr>
<tr>
<td>E6</td>
<td>Control axis detachment warning</td>
<td>A control axis is being detached. (State display)</td>
<td>*</td>
<td>-</td>
</tr>
<tr>
<td>E7</td>
<td>NC emergency stop</td>
<td>In NC emergency stop. (State display)</td>
<td>*</td>
<td>Dec stop enabled</td>
</tr>
<tr>
<td>E8</td>
<td>Power supply warning</td>
<td>The power supply unit detected a warning. The error details are different according to the connected power supply unit. Refer to &quot;Power supply warning&quot;.</td>
<td>*</td>
<td>-</td>
</tr>
</tbody>
</table>

(Noted1) Definitions of terms in the table are as follows.

Main side encoder: Encoder connected to CN2
Sub side encoder: Encoder connected to CN3

(Note 2)Resetting methods

* : Automatically reset once the cause of the warning is removed.
NR: Reset with the NC RESET button. This warning can also be reset with the PR and AR resetting conditions.
PR: Reset by turning the NC power ON again. This warning can also be reset with the AR resetting conditions.
When the control axis is removed, this warning can be reset with the NC RESET button. (Excluding warning 93.)
AR: Reset by turning the NC and servo drive unit power ON again.

(Note 3) Servo and spindle motor do not stop when the warning occurs.

(Note 4) When an emergency stop is input, servo and spindle motor decelerate to a stop. (When SV048, SV055 or SV056 is set for servo and when SP055 or SP056 is set for spindle.)

Dual signal warning (A4)

<table>
<thead>
<tr>
<th>No.</th>
<th>Name</th>

<td>*</td>
</tr>
<tr>
<td>EB</td>
<td>Power supply: Over regeneration warning</td>
<td>Over-regeneration detection level exceeded 80%</td>
<td>*</td>
</tr>
<tr>
<td>EE</td>
<td>Power supply: Fan stop warning</td>
<td>A cooling fan built in the power supply unit stopped</td>
<td>*</td>
</tr>
<tr>
<td>EF</td>
<td>Power supply: Option unit warning</td>
<td>A warning was detected in the power backup unit (power supply option unit)</td>
<td>* (Note 3)</td>
</tr>
</tbody>
</table>

(Note 1) Resetting methods

* : Automatically reset once the cause of the warning is removed.
NR: Reset with the NC RESET button. This warning can also be reset with the PR and AR resetting conditions.
PR: Reset by turning the NC power ON again. This warning can also be reset with the AR resetting conditions.
When the control axis is removed, this warning can be reset with the NC RESET button. (Excluding warning 93.)
AR: Reset by turning the NC and servo drive unit power ON again.

(Note 2) Servo and spindle motor do not stop when the warning occurs.

(Note 3) Check the LED display of the power backup unit to identify what warning is occurring to the power backup unit.

** Refer to your drive unit's instruction manual for details.
### 3.6 Safety Function Warnings (S53)

<table>
<thead>
<tr>
<th>S53</th>
<th>Safety function warning</th>
<th>0001</th>
<th>(Axis name)</th>
</tr>
</thead>
</table>

**Details**

The system has been set in the STO state.
The STO state is also entered at the time of emergency stop, but in this case, this warning will not appear because the emergency stop has priority.
MCP Alarms (Y)
Y02 System alarm: Process time over 0050

Details
System alarm: Process time is over.

Remedy
The software or hardware may be damaged.
Contact the service center.
(Note) When two or more alarms (Y02 0051) occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: Data ID error 0051 xy03

Details
A communication error has occurred between controller and drive unit.
x: Channel No. (0 to)
y: Drive unit rotary switch No. (0 to)

Remedy
• Take measures against noise.
• Check for any failure of the communication cable connectors between controller and drive unit or between two drive units.
• Check for any failure of the communication cables between controller and drive unit or between two drive units.
• A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
• Update the drive unit software version.
(Note) When two or more alarms (Y02 0051) occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: Recv frame No. 0051 xy04

Details
A communication error has occurred between controller and drive unit.
x: Channel No. (from 0)
y: Drive unit rotary switch No. (from 0)

Remedy
• Take measures against noise.
• Check for any failure of the communication cable connectors between controller and drive unit or between two drive units.
• Check for any failure of the communication cables between controller and drive unit or between two drive units.
• A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
• Update the drive unit software version.
(Note) When two or more alarms (Y02 0051) occur at the same time, only the alarm which has occurred first is displayed.

Y02 SV commu er: Commu error 0051 x005

Details
A communication error has occurred between controller and drive unit.
x: Channel No. (from 0)

Remedy
• Take measures against noise.
• Check for any failure of the communication cable connectors between controller and drive unit or between two drive units.
• Check for any failure of the communication cables between controller and drive unit or between two drive units.
• A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
• Update the drive unit software version.
(Note) When two or more alarms (Y02 0051) occur at the same time, only the alarm which has occurred first is displayed.
Details
A communication error has occurred between controller and drive unit.

Remedy
- Take measures against noise.
- Check for any failure of the communication cable connectors between controller and drive unit or between two drive units.
- Check for any failure of the communication cables between controller and drive unit or between two drive units.
- A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
- Update the drive unit software version.

(Note) When two or more alarms (Y02 0051) occur at the same time, only the alarm which has occurred first is displayed.

Y02  SV commu er: Connect error  0051  x006

Y02  SV commu er: Safe posn FB err  0051  x007

Y02  SV commu er : Init commu error  0051  xy20
A communication error has occurred between controller and drive unit.
No response from drive unit to the request from NC when setting network configuration.
x: Channel No. (from 0)
y: Station No. (from 0)

Remedy
• Take measures against noise.
• Check for any failure of the communication cable connectors between controller and drive unit or between two drive units.
• Check for any failure of the communication cables between controller and drive unit or between two drive units.
• A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
• Update the drive unit software version.
(Note) When two or more alarms (Y02 0051) occur at the same time, only the alarm which has occurred first is displayed.

A communication error has occurred between controller and drive unit.
Drive unit's software version doesn't support the communication mode that the controller requires.
x: Channel No. (from 0)
y: Station No. (from 0)

Remedy
• Take measures against noise.
• Check for any failure of the communication cable connectors between controller and drive unit or between two drive units.
• Check for any failure of the communication cables between controller and drive unit or between two drive units.
• A drive unit may be faulty. Take a note of the 7-segment LED contents of each drive unit and contact the Service Center.
• Update the drive unit software version.
(Note) When two or more alarms (Y02 0051) occur at the same time, only the alarm which has occurred first is displayed.

The drive unit is not correctly connected.
Alphabet(axis name): NC axis drive unit not mounted
P1 to P6: PLC axis drive unit not mounted
S1: No.1 spindle axis drive unit not mounted
S2: No.2 spindle axis drive unit not mounted
S3: No.3 spindle axis drive unit not mounted
S4: No.4 spindle axis drive unit not mounted
S5: No.5 spindle axis drive unit not mounted
S6: No.6 spindle axis drive unit not mounted

Remedy
• Check the drive unit mounting state.
• Check the end of the cable wiring.
• Check for any broken wires.
• Check the connector insertion.
• The drive unit input power has not been ON.
• The drive unit axis No. switch is illegal.

</table>
The spindle/C axis "#1021 mcp_no (Drive unit I/F channel No. (servo))" and "#3031 smcp_no (Drive unit I/F channel No. (spindle))" are not set to the same values.

Remedy
Check the values set for the following parameters.
"#1021 mcp_no (Drive unit I/F channel No. (servo))"
"#3031 smcp_no (Drive unit I/F channel No. (spindle))"

A random layout has been set while "#1154 pdoor" has been set to "1" in two-part system.

Remedy
Check the values set for the following parameters.
"#1021 mcp_no (Drive unit I/F channel No. (servo))"
"#3031 smcp_no (Drive unit I/F channel No. (spindle))"

The channel No. parameter is not within the setting range.

Remedy
Check the values set for the following parameters.
"#1021 mcp_no (Drive unit I/F channel No. (servo))"
"#3031 smcp_no (Drive unit I/F channel No. (spindle))"

Remove connected axes from the channel whose alarm No. is other than '0' for the number displayed as the alarm No. Keep the number of connected axes to or less than the maximum that can be connected.

(Note 1) The number of axes is limited per each drive unit interface channel.
(Note 2) Maximum number of axes that can be connected differs depending on whether or not an expansion unit is available or the setting of '11012 16 axes for 1ch (Connecting 16 axes for 1ch)'.
With the expansion unit, up to eight axes can be connected to a channel. Without the expansion unit, up to eight axes are allowed when '11012 16 axes for 1ch (Connecting 16 axes for 1ch) is set to '0', sixteen axes when set to '1'.
(Note 3) If this alarm occurs, the alarm 'Y03 Message: Drive unit unequipped' will not occur.
(Note 4) This alarm is displayed taking precedence over the alarm 'Y08 Too many drive units connected' and 'Y09 Too many axisno connected'.
C80 Series Alarm/Parameter Manual
4 MCP Alarms (Y)

Y08 Too many drive units connected 00xy

Details
The number of drive units connected to each channel exceeds 8.
The exceeded number of drive units per channel is displayed as alarm No.
x: Exceeded number of drive units at drive unit interface channel 2 (0 to F)
y: Exceeded number of drive units at drive unit interface channel 1 (0 to F)

Remedy
Remove drive units from the channel whose alarm No. is other than "0" for the number displayed as the alarm No. Keep the number of connected drive units to 8 or less.
(Note 1) The drive unit is not counted when all the axes connected to it are invalid.
(Note 2) If this alarm occurs, the alarm "Y03 Message: Drive unit unequipped" will not occur.
(Note 3) The alarm "Y07 Too many axes connected" and "Y09 Too many axisno connected" are displayed taking precedence over this alarm.

Y09 Too many axisno connected 00xy

Details
The No. of the axis (drive unit's rotary switch No.) connected to each channel is bigger than the No. allowed.
If the axis No. of each channel is bigger than the No. allowed, "1" is displayed for the alarm No.
x: "1" when the axis No. at drive unit interface channel 2 is too big
y: "1" when the axis No. at drive unit interface channel 1 is too big

Remedy
For the channel whose alarm No. is "1", keep the axis No. (drive unit's rotary switch No.) not bigger than the No. allowed.
(Note 1) The axis No. is limited per each drive unit interface channel.
(Note 2) The biggest allowed connected axis No. differs depending on whether or not an expansion unit is available or the setting of "#11012 16 axes for 1ch (Connecting 16 axes for 1ch)". The biggest connectable axis No. is as shown below.
With the expansion unit, axes No. '0' to '7' can be connected.
Without the expansion unit, axes No. '0' to '7' are allowed when "#11012 16 axes for 1ch (Connecting 16 axes for 1ch)" is set to '0', axes No. '0' to 'F' when set to '1'.
(Note 3) If this alarm occurs, the alarm "Y03 Message: Drive unit unequipped" will not occur.
(Note 4) This alarm is displayed taking precedence over the alarm "Y08 Too many drive units connected".
(Note 5) The alarm "Y07 Too many axes connected" is displayed taking precedence over this alarm.

Y12 No commu. with axis drv unit

Details
Although the high-speed synchronous tapping option is valid, the connected drive unit doesn't support the option.

Remedy
• Replace the drive unit with that supports the option.
• Set "High-speed synchronous tapping disabled axis" parameter as disabled for the axis to which you don't use the high-speed synchronous tapping.

Y13 No commu. with sp drv unit

Details
Although the high-speed synchronous tapping option is valid, the connected drive unit doesn't support the option.

Remedy
• Replace the drive unit with that supports the option.
• Set "High-speed synchronous tapping disabled axis" parameter as disabled for the spindle to which you don't use the high-speed synchronous tapping.
### RIO connection error

#### Details
RIO station number is too large
Although a non-RIO2.0 unit is connected, 9 or a greater number is set as a station No.

#### Remedy
- If a non-RIO2.0 unit is connected, set the station No. to be 8 or smaller.
- If you use 9 or a greater station No., do not connect a non-RIO2.0 unit.

#### RIO3 connection error
A non-RIO2.0 unit is connected to RIO3.

#### Remedy
- Connect a RIO2.0-compatible or RIO2.0-dedicated unit.

#### RIO communication processing time exceeded (PC medium speed)
Due to too short DI/DO refresh cycle, the control may not refresh all the DI/DOs connected to one RIO channel at a time.

#### Remedy
- Correct the setting of "#1334 DI/DO refresh cycl(DI/DO refresh cycle)".
- Connect the remote IO units to RIO1, RIO2 and RIO3 dispersedly to reduce the number of RIO stations connected per RIO channel.

#### RIO communication processing time exceeded (PC high speed)
Due to too short DI/DO refresh cycle, the control may not refresh all the DI/DOs connected to one RIO channel at a time.

#### Remedy
- Connect the remote IO units to RIO1, RIO2 and RIO3 dispersedly to reduce the number of RIO stations (which perform high-speed input/output) per RIO channel.

### Parameter compare error

#### Details
The speed monitoring parameter in the NC does not correspond to the parameter transmitted to the drive unit.
The name of the axis with an error is displayed.

#### Remedy
- The NC or the servo drive unit may be damaged.
- Contact the service center.

#### Details
The speed exceeding the speed set with the parameter was commanded during the speed monitoring mode.
The name of the axis with an error is displayed.

#### Remedy
- Check the speed monitoring parameter and the sequence program.
- Restart the NC.

#### Details
The commanded position, transmitted to the servo drive unit from NC, is totally different from the feedback position received from the servo drive unit during the speed monitoring mode.
The name of the axis with an error is displayed.

#### Remedy
- The NC or the servo drive unit may be damaged.
- Contact the service center.
Details
Actual rotation speed of the motor is exceeding the speed that has been set with speed monitoring parameter during the speed monitoring mode.
The name of the axis with an error is displayed.

Remedy
Correct the speed observation parameter and the sequence program.
Restart the NC.

Y20 Door signal: Input mismatch

Details
Door state signals on the NC side and the drive side do not match. It may be caused by the followings:
• Cable disconnection
• Damaged door switch
• Damaged NC or servo drive unit

Remedy
Check the cable.
Check the door switch.
Restart the NC.

Y20 No speed observation mode in door open

Details
The door open state was detected when the speed monitoring mode was invalid.
The causes may be same as the ones for 0005 (Door signal: Input mismatch). Also the sequence program may not be correct.

Remedy
Correct the sequence program.
Restart the NC.

Y20 Speed obsv: Para incompatible

Details
Two speed monitoring parameters are not matched at the rising edge of the "speed monitor mode" signal.
The name of the axis with an error is displayed.

Remedy
Correct the relevant parameters so that the two speed monitoring parameters match.
Restart the NC.

Y20 Contactor welding detected

Details
Contactor welding was detected.
The alarm indicates the parameter to which the weld detection device of the error contactor is assigned with the bit.
bit0: #1330 MC_dp1
bit1: #1331 MC_dp2
bit2: #1339 MC_dp3
bit3: #1340 MC_dp4

Remedy
• Make sure that the contactor's auxiliary b contact signal is output correctly to the contactor weld detection device.
If welding, replace the contactor.
• Check the setting of the contactor weld detection device parameter.
Details
"#2313 SV113 SSF8/bitF (ssc SLS (Safely Limited Speed) function)" and "#13229 SP229 SFNC9/bitF (ssc SLS (Safely Limited Speed) function)" are set for a system with no safety observation option.

Remedy
Disable "#2313 SV113 SSF8/bitF (ssc SLS (Safely Limited Speed) function)" and "#13229 SP229 SFNC9/bitF (ssc SLS (Safely Limited Speed) function)". Then, restart the NC.

Details
24VDC power is not supplied to SDIO connector correctly. (SDIO 4A pin supply voltage was dropped to 16V or less, or 1ms or more instant power interrupt was detected.) In this case, "Pw sply:Inst pw interpt(DC24V)" alarm occurs because the contactor control output signal cannot be controlled. This state remains until restarting the NC even if the cause of the alarm has been removed.

Remedy
Check the wiring. Supply 24VDC power to the SDIO connector. Restart the NC.

Details
Setting of the contactor shutoff output device parameter is incorrect. The alarm indicates the parameter of the incorrect setting with the bit.

bit0: #1353 MC_ct1

Remedy
• Check the setting of the contactor shutoff output device parameter.

Details
Contactor does not operate as commanded by the NC. The alarm indicates the parameter to which the weld detection device of the error contactor is assigned with the bit.

bit0: #1330 MC_dp1
bit1: #1331 MC_dp2
bit2: #1339 MC_dp3
bit3: #1340 MC_dp4

Remedy
• Check the settings of the following parameters.
  #1330 MC_dp1
  #1331 MC_dp2
  #1339 MC_dp3
  #1340 MC_dp4
  #1353 MC_ct1
  #1357 mchkt1
• Check the wiring for contactor shutoff.
• Check for contactor's welding.

Details
The drive unit's STO function has failed to work properly.

Remedy
If this alarm has occurred alone, a drive unit failure can be suspected. If other alarms have been generated at the same time, it is also possible that there is communication problem. Check the optical cable wiring.
### Y20 STO function illegal at pwr ON 0014

**Details**
The motor power has not been shut down with the STO function when the NC power was turned ON.

**Remedy**
If this alarm has occurred alone, a drive unit failure can be suspected. If other alarms have been generated at the same time, it is also possible that there is communication problem. Check the optical cable wiring.

### Y20 Dual signal: parameter setting error 0027

**Details**
A setting of #2118 SscDrSel, #3071 SscDrSelSp, #2180 S_DIN, or #3140 S_DINSp is not correct.

**Remedy**
- Correct the parameter setting.

### Y20 Safety observation: parameter memory error 0031 (Parameter No.)

**Details**
The following parameters are not consistent with the check data.
- #2180 S_DIN, #3140 S_DINSp

**Remedy**
- Correct the parameter setting.
- Restore the backup data, as the parameter or check data may be corrupted.

### Y21 Speed obsv signal: Speed over 0001 (Axis name)

**Details**
The speed exceeds the safety speed limit when the "speed monitor mode" signal is ON. The name of the axis with an error is displayed.

**Remedy**
Decelerate the speed to reset the warning and start the speed monitor.

### Y40 Machine group-based stop

**Details**
A machine group-based alarm stop has occurred, or the machine group-based PLC interlock signal has been input.

**Remedy**
- Remove the cause of the stop by alarm. Turn OFF the machine group-based PLC interlock signal.

### Y51 Parameter G0tL illegal 0001

**Details**
The time constant has not been set or exceeded the setting range.

**Remedy**
Correct "#2004 G0tL (G0 time constant (linear))".

### Y51 Parameter G1tL illegal 0002

**Details**
The time constant has not been set or exceeded the setting range.

**Remedy**
Correct "#2007 G1tL (G1 time constant (linear))".

### Y51 Parameter G0tI illegal 0003

**Details**
The time constant has not been set or exceeded the setting range.

**Remedy**
Correct "#2005 G0tI (G0 time constant (primary delay) / Second-step time constant for soft acceleration/deceleration)".
### Y51 Parameter G1t1 illegal 0004

**Details**
The time constant has not been set or exceeded the setting range.

**Remedy**
Correct "#2008 G1t1 (G1 time constant (primary delay)/Second-step time constant for soft acceleration/deceleration)".

### Y51 Parameter grid space illegal 0009

**Details**
The grid space is illegal.

**Remedy**
Correct "#2029 grspc(Grid interval)".

### Y51 Parameter stapt1-4 illegal 0012

**Details**
The time constant has not been set or exceeded the setting range.

**Remedy**
Correct the parameters from "#3017 stapt1(Tap time constant (Gear: 00))" to "#3020 stapt4(Tap time constant (Gear: 11))".

### Y51 Slave axis No. illegal 0014

**Details**
In the axis synchronization, parameter settings for slave axis have been attempted in different part system from that of master axis.

**Remedy**
Correct the "#1068 slavno (Slave axis number)" setting.

### Y51 Parameter skip_tL illegal 0015

**Details**
The time constant has exceeded the setting range.

**Remedy**
Correct "#2102 skip_tL (Skip time constant linear)".

### Y51 Parameter skip_t1 illegal 0016

**Details**
The time constant has exceeded the setting range.

**Remedy**
Correct "#2103 skip_t1 (Skip time constant primary delay / Second-step time constant for soft acceleration/deceleration)".

### Y51 Parameter G0bdcc illegal 0017

**Details**
"#1205 G0bdcc (Acceleration and deceleration before G0 interpolation)" for the 2nd part system is set to acceleration/deceleration before G0 interpolation.

**Remedy**
Correct "#1205 G0bdcc (Acceleration and deceleration before G0 interpolation)".

### Y51 OMR-II parameter error 0018

**Details**
An illegal setting was found in the OMR-II-related parameters. OMR-II has been disabled.

**Remedy**
Correct the related parameter settings.

System Alarms (Z)
### Z02 System error

**Details**
The operation result is illegal.

**Remedy**
- Contact the service center.

### Z11 CC-L IE F communication error

**Details**
A communication error has occurred in the communication that uses a CC-Link IE field network unit.

- **n1**: Indicates the No. of slot to which the expansion unit with the communication error or diagnostic alarm is mounted (in hexadecimal format).
- **n2**: Indicates the alarm No. of the slot where the communication error or diagnostic alarm is occurring (in hexadecimal format).

Refer to the list of messages in specification manual.

### Z13 CC-L IE F parameter error

**Details**
Parameter setting of #[Parameter No.] is incorrect.

Refer to the list of messages in specification manual.

**Remedy**
Correct the setting.

### Z14 CC-Link IE F H/W test status

**Details**
H/W test is completed for the CC-Link IE field network unit.

- **n1**: Indicates the H/W test result of slot 1 (in hexadecimal format).
- **n2**: Indicates the H/W test result of slot 2 (in hexadecimal format).

- **0**: H/W test is normally completed or not performed
- **2**: External self-loopback test is completed with connection error
- **3**: External self-loopback test is completed with communication error
- **FFFFFF**: H/W test is underway

**Remedy**
Take the following measures according to the test result.

- **0**: Check the communication mode.
  - If the mode is H/W test, switch it to online, and turn OFF and ON the NC power.
  - If a mode other than H/W test is active, check the result of the other slot and take the measures.

- **2**: Make sure the connection of Ethernet cable, or exchange the cable. And then perform the test again.
  - If the error occurs again, exchange the H/W.

- **3**: Exchange the Ethernet cable, and perform the test again.
  - If the error occurs again, exchange the H/W.

- **FFFFFF**: Turn OFF and ON the NC power.
  - If the result is unchanged, exchange the H/W.
5 System Alarms (Z)

**Z18**  Network expansion card error  n1 n2

**Details**
An abnormality has occurred on the field network communication expansion unit.
- n1: Error slot No.
- n2: Error No.

**Remedy**
- 0 99:
  - Two Fieldbus communication expansion units which cannot be used simultaneously are mounted simultaneously. Remove either of Fieldbus communication expansion unit.
  - Other than 0 99:
    - A failure on the hardware can be speculated. Replace the field network communication expansion unit.

**Z21**  PROFIBUS parameter error  (Parameter No.)

**Details**
The parameter #[Parameter #] is incorrect.

**Remedy**
- Correct the setting.

**Z23**  AXIS EX-ADR. ERROR

**Details**
The axis not extending the address (1 character axis) exists at the back of the axis extending the address (2 character axis) in the same system.

**Remedy**
- Improve the axis composition. The axis not extending the address can not exist at the back of the axis extending the address in the same system.

**Z25**  Unable to start safe spd clamp

**Details**
The SLS observation request signal has been turned OFF in any of the following machining modes:
- Thread cutting, synchronous tapping, cross machining, superimposition control, tool center point control or SSS control

**Remedy**
- Perform the operation with the SLS observation request signal ON.
- Perform the operation with the door closed.

**Z26**  NC unit replacement illegal

**Details**
NC unit is replaced to the FCU8-MU541, FCU8-MA541, FCU8-MU501, or FCU8-MU502.

**Remedy**
- Contact to your service center.
- Press the reset to cancel the warning and continue the operations.

**Z27**  FnctnlSafetyExpnsCard MountErr

**Details**
A functional safety expansion card is mounted to the NC unit (FCU8-MU501 or FCU8-MU50).

**Remedy**
- Contact to your service center.
- Press the reset to cancel the warning and continue the operations.

**Z28**  EtherNet/IP parameter error  (Parameter No.)

**Details**
Parameter setting of #[Parameter No.] is incorrect.
Refer to the list of messages in "EtherNet/IP specification manual".

**Remedy**
- Correct the setting.
### Details

A communication error has occurred in the communication that uses an EtherNet/IP expansion unit.

- **n1**: Output the device Number (in hexadecimal format)
- **FF**: Simultaneously mounting two EtherNet/IP expansion units error
- **n2**: Output the position No. (in hexadecimal format)
- **FF**: Simultaneously mounting two EtherNet/IP expansion units error
- **n3**: Output the device communication status (IN) (in hexadecimal format)
- **n4**: Output the device communication status (OUT) (in hexadecimal format)

For details, refer to "EtherNet/IP Specifications manual".

### Z31 Socket open error(socket)

| 0001 |

**Details**

Socket open error (socket)

**Remedy**

Set the parameter then turn the power OFF and ON again.

### Z31 Socket bind error(bind)

| 0002 |

**Details**

Socket bind error (bind)

**Remedy**

Set the parameter then turn the power OFF and ON again.

### Z31 Connection wait queue error(listen)

| 0003 |

**Details**

Connection wait queue error (listen)

**Remedy**

Set the parameter then turn the power OFF and ON again.

### Z31 Connection request error(accept)

| 0004 |

**Details**

Connection request error (accept)

### Z31 Data recv error(socket error)

| 0005 |

**Details**

Data receive error (socket error)

### Z31 Data recv error(data error)

| 0006 |

**Details**

Data receive error (data error)

### Z31 Data send error(socket error)

| 0007 |

**Details**

Data send error (socket error)

### Z31 Data send error(data error)

| 0008 |

**Details**

Data send error (data error)

### Z31 Socket close error(close)

| 000A |

**Details**

Socket close error (close)

**Remedy**

Set the parameter then turn the power OFF and ON again.
### Z34 DeviceNet error

**Details**
- Any of the following errors has occurred in the DeviceNet unit.
  - Master function error (X03 is ON)
  - Slave function error (X08 is ON)
  - Message communication error (X05 is ON)

If the errors have occurred in more than one unit, the error No. of the unit with the smallest slot No. is displayed.

If the master function, slave function and message communication errors have occurred at the same time, the error is displayed in the following priority order.
1. Master function error
2. Slave function error
3. Message communication error

**Remedy**
- Select the [Ext. PLC link control] menu on the maintenance screen to open the unit confirmation screen, and check the unit in error and details to cancel the error.

### Z35 Direct Socket connection error 0001

**Details**
- Connection has failed.
- Five or more clients attempted a connection.

**Remedy**
- Check the connection of the network cables, and check for broken wires and a failure of the network connection devices such as hub.
- When using the Direct Socket communication I/F, connect up to four clients.

### Z35 Direct Socket receive error 0002

**Details**
- Receiving data from a client has failed.

**Remedy**
- Check the connection of the network cables, and check for broken wires and a failure of the network connection devices such as hub.

### Z35 Direct Socket send error 0003

**Details**
- Sending data to a client has failed.

**Remedy**
- Check the connection of the network cables, and check for broken wires and a failure of the network connection devices such as hub.

### Z35 Direct Socket timeout error 0004

**Details**
- There was no response from client computers, and a timeout error occurred.

**Remedy**
- Check the connection of the network cables, and check for broken wires and a failure of the network connection devices such as hub.

### Z35 Direct Socket comm OFF 0005

**Details**
- The direct Socket communication I/F is OFF.

**Remedy**
- Check the parameter "#11051 Direct Socket ON".
Details
An error has occurred in the communication with EcoMonitorLight.
Remedy
Make sure that the CNC has the same communication settings (station No., baud rate, parity and stop bit) as the EcoMonitorLight in error.
Make sure that there are no problems with the serial cable connected to the EcoMonitorLight.
Make sure to place the serial cable in a low-noise environment.

Details
The number of EcoMonitorLight units connected is inconsistent with the setting of the parameter #11061.
Remedy
Make sure that the value set in the parameter #11061 coincides with the number of EcoMonitorLight units connected to the CNC.
Also make sure all the EcoMonitorLight units connected are powered ON and the station No. is not duplicated.

Details
The motor insulation has been deteriorated.
0001: Motor insulation deterioration: Caution
0002: Motor insulation deterioration: Replacement required
0003: Motor insulation deterioration: Relay welding detected
Remedy
0001: The insulation resistance value of the motor has dropped.
Contact the service center.
0002: The insulation resistance value of the motor is less than or equal to the reference value.
Contact the service center.
When measuring the insulation resistance of the motor and the measured resistance value is less than or equal to the specified value, the motor may be damaged.
0003: The drive unit may be damaged.
Contact the service center.

Details
E-mail sending with the email notification to operator function failed.
Remedy
• Check the e-mail environment setting.
• Check the registered e-mail address.
• Set "0" in "#8134 E-mail send disabled".

Details
Writing the parameter file failed.
When the parameter number is not "0000": Range exceeded
• The parameter value is incorrect.
• The part system number, axis number, spindle number or data number is incorrect.
When the parameter number is "0000": Format error
• The format is incorrect.
(Note) The screen shows the parameter in which the input error was first detected.
Remedy
• Correct the parameter file and import it again.
• Switch the "Parameter input error cancel" signal (Y1C87) from OFF to ON.
(Note) When the alarm indication for a certain parameter is removed with the signal while the input error is occurring for more than one parameter, the alarm will not be indicated again for the other parameter.
### Z49  RIO watchdog error 0001

**Details**
An error has occurred in the remote I/O unit.

**Remedy**
- Turn the power ON again.
- If this error remains active after the power ON, replace the remote I/O unit.

### Z51  E2PROM error 001x

**Details**
- **[Type]**
  - Z51 E2PROM error 0011: Read error
  - Z51 E2PROM error 0012: Write error

**Remedy**
- If the same alarm is output by the same operation, the cause is an H/W fault. Contact the Service Center.

### Z52  Battery fault 000x

**Details**
- The voltage of the battery in the NC control unit has dropped. (The battery used to save the internal data.)
  - 0001: Battery warning
  - 0002: Battery detecting circuit error
  - 0003: Battery alarm

*(Note)* The display of "Z52 battery fault 0001" can be removed by resetting. However, the warning state will not be cleared until the battery is replaced.

**Remedy**
- Replace the battery of the NC control unit.
- Check for any disconnection of the battery cable.
- After fixing the battery’s fault, check the machining program.

### Z53  CNC overheat

**Details**
- The controller or operation board temperature has risen above the designated value.

*(Note)* Temperature warning
- When an overheat alarm is detected, the alarm is displayed and the overheat signal is output simultaneously. Automatic operation will be continued, while restarting after resetting or stopping with M02/M30 is not possible. (Restarting after block stop or feed hold is possible.)
- The alarm will be cleared and the overheat signal will turn OFF when the temperature drops below the specified temperature.
- Z53 CNC overheat 000x
  - [000x]

*(For all models)*
- 0001: The temperature in the control unit is high.
- The ambient temperature must be lowered immediately when a "Z53 CNC overheat" alarm occurs. However, if the machining needs to be continued, set "#6449/bit7 Control unit temperature alarm ON" to "0". Then the alarm will be invalidated.

**Remedy**
- Cooling measures are required.
- Turn OFF the controller power, or lower the temperature with a cooler, etc.
Z55 RIO communication stop

Details
An error occurs in the communication between the control unit and remote I/O unit. Disconnection of a cable
Fault in remote I/O unit
Fault of power supply to remote I/O unit

The communication interrupted station is displayed in hexadecimal for each RIO channel when an error occurs in the communication between the control unit and remote I/O unit.

When the control displays a communication stop station, it divides the RIO channel stations (up to 64 stations) into groups of 8 stations. If any of the 8 stations has the communication stop error, the number is displayed with the alarm.

Z55 RIO communication stop __ __ __ __ __ __ __ __

(a) (b) (c) (d) (e) (f) (g) (h)

(a)(b): RIO1
(c)(d): RIO2
(e)(f): RIO3
(g)(h): "00" fixed

(a)(b), (c)(d), and (e)(f) indicate the following stations in hexadecimal.
bit0: 1st to 8th stations
bit1: 9th to 16th stations
bit2: 17th to 24th stations
bit3: 25th to 32nd stations
bit4: 33rd to 40th stations
bit5: 41st to 48th stations
bit6: 49th to 56th stations
bit7: 57th to 64th stations

(Example) Stations #1 and #8 of RIO1 and stations #24 and #64 of RIO3 have the communication error.
Z55 RIO communication stop 0100 8400

The RIO error status can be monitored through the R registers on the self diagnostic or I/F diagnostic screen.

Remedy
• Check and replace the cables.
• Replace the remote I/O unit.
• Check the power supply (existence of supply and voltage).

Z57 System warning

Details
Program memory capacity has been set over the value that can be formatted.
An expansion device/expansion cassette has not mounted after formatting.
The mounted expansion device/expansion cassette is different from the one that was mounted at formatting.

Remedy
Check the followings.
• Program memory capacity
• Mounting of an expansion device/expansion cassette
• A PLC release option

Z58 ROM write not completed

Details
A machine tool builder macro program has not been written to FROM after being registered/ edited/ copied/ condensed/ merged/ the number changed/ deleted.

Remedy
• Write the machine tool builder macro program to FROM.

The program does not need to be written to FROM unless the editing operations and so on need to be valid after the NC power OFF.
## Z59  Acc/dec time cnst too large

**Details**

Acceleration and deceleration time constants are too large.
(This alarm occurs with the stop code (T02 0206).)

**Remedy**

- Set the larger value for "#1206 G1bF(Maximum speed)".
- Set the smaller value for "#1207 G1btL(Time constant)".
- Set the lower feedrate.

## Z60  Fieldbus communication error  

**Details**

A communication error has occurred on the Fieldbus communication with FCU8-WN563.

[n1: denotes the master station status (in the hexadecimal form).]
00: Offline: In initialization
40: Stop: I/O communication stopped
80: Clear: Resetting the output data of each slave by sending zero data
C0: In operation: In I/O communication
FF: Two Fieldbus expansion units are mounted.

[n2: denotes the error condition (in the hexadecimal form).]
bit0: Control error: Parameter error
bit1: Auto clear error: Communication with all the slave stations was cut because a communication with one slave station had an error.
bit2: Non-exchange error: A slave station has communication error.
bit3: Fatal error: Communication cannot be continued because of severe network failure.
bit4: Not ready: CNC communication is not ready.
bit5: Timeout error: Timeout is detected in communication with each station.
bit6: Not used
bit7: Not used
FF: Two Fieldbus expansion units are mounted.

[n3: denotes the slave station where communication error has occurred (in the hexadecimal form).]
* FF is indicated when two Fieldbus expansion units are mounted.

[n4: denotes the error number (in the hexadecimal form).]
This shows the communication state with slave station where error is occurring.
For details, refer to "PROFIBUS-DP Specification manual".

## Z64  Valid term soon to be expired  

**Details**

The valid term will be expired in less than a week. Remaining valid term is xx days.

**Remedy**

- Obtain a decryption code from the machine tool builder and input it in the NC, then turn the power ON again.

## Z65  Valid term has been expired

**Details**

The valid term has been expired with no decryption code input.

**Remedy**

- Obtain a decryption code from the machine tool builder and input it in the NC, then turn the power ON again.

## Z67  CC-Link communication error

**Details**

A communication error occurred during CC-Link communication using CC-Link unit.

**Remedy**

- Refer to "List of Messages" in CC-Link (Master/Local) Specification manual (BNP-C3072-089).

## Z68  CC-Link unconnected

**Details**

A cable between CC-Link unit and a device is disconnected or broken.

**Remedy**

- Find the unconnected cable by checking SW0080 to SW0083 and connect it.

<tr>
<td>Z69</td>
<td>External link error</td>
<td>With a FROM/TO instruction, a value out of the address range (negative value, or 0x8000 or over) was set as the head address of the buffer memory.</td>
<td>Correct the head address of the buffer memory.</td>
</tr>
<tr>
<td>Z69</td>
<td>External link error</td>
<td>An alarm occurred in the MELSEC module mounted on the extension base.</td>
<td>Check for any disconnection of the MELSEC module and the cables on the extension base. Then turn the CNC's power ON again.</td>
</tr>
</tbody>
</table>
### Z69  External link error

**Details**

The I/O No. designated in the FROM/TO instruction is different from the mounted location of the intelligent function module on the extension base (the module's I/O No.).

**Remedy**

Correct the I/O No. Then turn the CNC's power ON again.

### Z82  3D machine interference/No machine model

**Details**

Machine model is not registered.

**Remedy**

- Press RESET to cancel the alarm.
- Movement can be resumed after the cancellation. However, the 3D machine interference check will become invalid.
- Inform the machine tool builder if an alarm occurs.

### Z82  3D machine interference/Machine model illegal

**Details**

Machine model is illegal.

**Remedy**

- Press RESET to cancel the alarm.
- Movement can be resumed after the cancellation. However, the 3D machine interference check will become invalid.
- Inform the machine tool builder if an alarm occurs.

### Z82  3D machine Interference check load excess

**Details**

The calculation of the interference check took time and caused a deceleration.

**Remedy**

- Inform the machine tool builder.
- Restart the axis in case of a manual operation.
- In case of an automatic operation, the operation will automatically resume when the processing load of the interference check decreases.

### Z82  3D machine Interference check error

**Details**

The interference check failed.

**Remedy**

- Take a note of the failed status and contact the service center.
- Press RESET to cancel the alarm. Invalidate the 3D machine interference check to continue the operation.

### Z84  Unable to save all the history

**Details**

The system is unable to store the data due to lack of free space on the internal memory.

**Remedy**

- Ensure sufficient free space on the internal memory.

### Z85  OP panel I/O not connected

**Details**

Failed to recognize the connection between the NC unit and operation panel I/O unit.

**Remedy**

- Make sure an operation panel I/O unit is connected.
- Make sure an operation panel I/O unit is supplied with power.
- Check for disconnection of the cable between the NC unit and operation panel I/O unit.

*If you connect no operation panel I/O unit to the NC unit, set the parameter "#1261 set33/bit1" to "1".*
Details
No display unit is connected to the operation panel I/O unit.

Remedy
• Make sure an operation panel I/O unit for M800W Series is connected.
• Make sure the operation panel I/O unit is being powered.
• Check for any cable disconnection between operation panel I/O and display units.

* If operation panel I/O is not connected to display unit in your system configuration, set the parameter "#1261 set33/bit2" to 0.

Details
Power OFF sequence has not been executed correctly.

Remedy
• Make sure an operation panel I/O unit for M800W Series is connected.
• Make sure the operation panel I/O unit is being powered.
• Check for any cable disconnection between NC and operation panel I/O units.
• Make sure the operation panel I/O and display units are connected.

* If no operation panel I/O is connected in your system configuration, set the parameter "#1261 set33/bit1" to 1, and "#1261 set33/bit2" to 0.

Details
Timeout has occurred during wait for the display power shutdown when automatic power OFF is being executed.

Remedy
• Make sure an operation panel I/O unit for M800W Series is connected.
• Make sure the operation panel I/O unit is being powered.
• Check for any cable disconnection between NC and operation panel I/O units.
• Make sure the operation panel I/O and display units are connected.

* If no operation panel I/O is connected in your system configuration, set the parameter "#1261 set33/bit1" to 1, and "#1261 set33/bit2" to 0.

Details
Overvoltage was detected in hardware voltage.

Remedy
• If this alarm occurs frequently, check the power supply voltage.

Z70 Abs posn param restored 0005 (Axis name)

**Details**

The data has been restored by inputting the parameters during the alarm No.0001, 0002, and 0003.

**Remedy**

Turn the power ON again to start the operation.

*Note* To release alarm "Z70 Abs data error", enter the parameter data output when establishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: Not required

Z70 Abs data error 0006 (Axis name)

**Details**

The deviation in the position of machine before and after the power ON has exceeded the set value for the parameter 

*Note* To release alarm "Z70 Abs data error", enter the parameter data output when establishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: Not required

Z70 Excess posn devia. at power ON 0007 (Axis name)

**Details**

The deviation in the position of machine before and after the power ON has exceeded the set value for the parameter 

*Note* To release alarm "Z70 Abs data error", enter the parameter data output when establishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: Not required

- Alarm reset when power is turned OFF: Reset

Z70 Abs posn data lost 0080 (Axis name)

**Details**

The absolute position data has been lost. An error of the multi-rotation counter data in the encoder and so on may be the cause. (Liquid penetrates into encoder connector, etc.)

**Remedy**

Replace the encoder and complete zero point initialization.

*Note* To release alarm "Z70 Abs data error", enter the parameter data output when establishing the absolute position and turn ON the power again. For the rotary axis, however, the alarm cannot be released by entering the parameter data.

- Zero point initialization: Required

- Servo alarm No.: (9E) etc.

• Alarm reset when power is turned OFF: Reset  
• Servo alarm No.: 93 |
Z71  AbsEncoder: Serial data error  0005  (Axis name)

Details
An error of the serial data was found in the absolute encoder.

Remedy
Check and replace the cables, card or encoder. Turn the power ON again and perform zero point initialization.
- Zero point initialization: (Required) only when the encoder has been replaced.
- Alarm reset when power is turned OFF: Reset
- Servo alarm No.: 92

Z71  AbsEncoder: Abs/inc posn diff  0006  (Axis name)

Details
Servo alarm E3
Absolute position counter warning

Remedy
Operation is possible until the power is turned OFF.
- Zero point initialization: (Required) after the power is turned ON again.
- Alarm reset when power is turned OFF: Reset (Z70-0106 is displayed after the power is turned ON again.)
- Servo alarm No.: E3

Z71  AbsEncoder: Initial commu er  0007  (Axis name)

Details
Initial communication with the absolute encoder is not possible.

Remedy
Check and replace the cables, card or encoder. Turn the power ON again and perform zero point initialization.
- Zero point initialization: (Required) only when the encoder has been replaced.
- Alarm reset when power is turned OFF: Reset
- Servo alarm No.: 18

Z72  Message: Position check error  (Axis name)

Details
An error is detected at the comparison of encoder's absolute position and controller coordinate values in the absolute position detection system.

Z73  Battery for abs data fault  0001

Details
Low backup battery
Servo alarm 9F
Low battery voltage

Remedy
If the battery voltage is low or the cable is damaged, there is no need to initialize the absolute position.
Distance-coded Reference Scale Errors (Z8*)
### Z80 Basic position lost 0001

**Details**

The basic point data saved in the NC has been damaged.

**Remedy**

- Set the parameters. If the basic point data is not restored by setting the parameters, perform zero point initialization.

### Z80 Basic position restore 0002

**Details**

The basic point data has been restored by setting the parameters.

**Remedy**

- Turn the power ON again to start the operation.

### Z80 No spec: Distance-coded scale 0003

**Details**

The distance-coded reference scale has been set available although this function is out of the specifications.

**Remedy**

- Check the specifications.
- If you do not use this function, correct the encoder type with the servo parameter.

### Z81 R-pos adjustment data lost 0001

**Details**

Reference position adjustment value data saved in the NC has been damaged.

**Remedy**

- Set the parameter. If the data is not restored by setting the parameter, establish the reference position again.

### Z81 R-pos adjustment data restored 0002

**Details**

After the ‘Z81 R-pos adjustment data lost 0001’, the data has been recovered by setting the parameter.

**Remedy**

- Establish the reference position to start the operation.

### Z83 NC started during SP rotation 0001

**Details**

The NC was started while the spindle was rotating.

**Remedy**

- Turn the power OFF and confirm that the spindle is not rotating, then turn the power ON again.

You can select whether or not to stop the spindle forcibly at the occurrence of this alarm by the setting of the base common parameter "#1284 ext20/bit1 (Spindle control selected in response to Z83 (NC started during SP rotation))".

| **Details** | Setting of the door open II fixed device is illegal.  
Setting of the parameters for dog signal random assignment is illegal. | |
| **Remedy** | • Correct the "#1155 DOOR_m" and "#1156 DOOR_s" settings. (When the door open II fixed device is not used, set "#1155 DOOR_m" and "#1156 DOOR_s" to "100".)  
• Correct the "#2073 zrn_dog (Origin dog Random assignment device)", "#2074 H/W_OT+ (H/W OT+ Random assignment device)", "#2075 H/W_OT- (H/W OT- Random assignment device)" and "#1226 aux10/bit5 (Arbitrary allocation of dog signal)" settings. | |
Details
An emergency stop occurs when the FROM/TO instruction is not executed within 500ms.

Remedy
- Execute the FROM/TO instruction one or more times every 500ms.

The time in which no interrupt request is issued from MELSEC is measured and stored in the following R registers:
- R10190: Current timeout counter
- R10191: Maximum timeout counter after power ON
- R10192: Maximum timeout counter after system is started up (this is backed up)

Details
MELSEC is in error and reset states.

Remedy
- Check the MELSEC states.

Details
The contents of MELSEC-specific code area in buffer memory have been damaged.

Remedy
- Check the MELSEC states.

Details
PLC serial link communication has stopped.

Remedy
- Check the CC-Link card wiring and the external sequencer transmission.
- Check the link communication errors shown on the diagnostic screen.

Details
The preparation sequence is not sent from the master station. Otherwise, the contents of the received preparation sequence are inconsistent with those of the parameters, so that the usual sequence cannot be started.

Remedy
- Check that the CC-Link card switch setting and wiring as well as the external sequencer transmission are normal.
- Check the diagnostic screen for link communication errors.

Details
The CC-Link card is operating incorrectly.
Switch/parameter settings for the CC-Link card are incorrect.

Remedy
- Replace the CC-Link card.
- Correct the switch/parameter settings for the CC-Link card.

Details
The sequence program has an illegal code.

Remedy
- Correct any illegal device Nos. or constants in the sequence program.

Details
The "emergency stop" signal for power supply is significant (open) because the external emergency stop function for power supply is enabled.

Remedy
- Cancel the "emergency stop" signal.
- Check for any broken wires.
8 Emergency Stop Alarms (EMG)

<table>

</tbody>
</table>
Computer Link Errors (L)
9 Computer Link Errors (L)

L01 Timeout error 0004

**Details**
Communication ended with timeout.
(CNC has a 248-byte receive buffer. The time during which CNC receives 248 bytes exceeds the 'TIME-OUT' value set in the I/O device parameter.

**Remedy**
- Set a greater timeout value in the input/output device parameter.
- Check the software in HOST and make sure that the HOST transmits data in response to DC1(data request) from CNC.
- Set '#9614 START CODE' to '0'.

L01 Host ER signal OFF 0010

**Details**
ER signal in HOST (or DR signal in CNC) is not turned ON.

**Remedy**
- Check for any disconnected cable.
- Check for any broke wire.
- Make sure that the HOST power is turned ON.

L01 Parity H error 0015

**Details**
Communication ended with parity H.

**Remedy**
- Check the software in HOST and make sure that the data to be transmitted to CNC is ISO code.

L01 Parity V error 0016

**Details**
Communication ended with parity V.

**Remedy**
- Correct the data to transmit to CNC.

L01 Overrun error 0017

**Details**
CNC received 10 bytes or more data from HOST in spite of DC3 (request to stop data transfer) transmission from CNC to the HOST, which terminated the communication.
CNC received 10 bytes or more data from HOST during the data transmission from CNC to the HOST.

**Remedy**
- Check the software in HOST and make sure that the HOST stops transmitting data within 10 bytes after receiving DC3.
- Correct the software in HOST not to transmit data such as a command or header to CNC during receiving a machining program.
User PLC Alarms (U)
(Note) U10 Illegal PLC (User PLC is illegal)
- "xx" in the lower 16 bits of the sub-status 1 indicates the program No. (0x01 to 0x78(in the hexadecimal form))
- The sub-alarm No. "yy" of sub-status 1 indicates the project No. ("yy" is not displayed when the maximum number of projects is 1)

(Note) For details of user PLC alarms (U), refer to the PLC Development Manual.

<tr>
<td><strong>Remedy</strong></td>
<td></td>
<td>Write &quot;sequence program&quot;, &quot;comment file&quot;, &quot;PLC message file&quot;, and &quot;symbolic information file&quot; again.</td>
<td></td>
</tr>
</tbody>
</table>
Details
Number of data over (at PLC system startup)
The total number of "comment files", "PLC message files", and "symbolic information files" stored in built-in ROM exceeded the maximum.
Remedy
Remedy the error in either of the following methods.
(1) Select [Format PLC memory] with GX Developer/GX Works2 and format the memory after setting [Target memory] to [Memory card(RAM)]. After that, write "comment file", "PLC message file", and "symbolic information file" again.
(2) Create a ladder with [Add New Data] in built-in PLC editing function and execute "Format". After that, write "sequence program", "comment file", "PLC message file", and "symbolic information file" again.

Details
Label branching error (Before executing PLC)
Occurs only when the bit selection parameter (#6452 bit6) "branch destination label check valid" is set to "1".
(1) The CJ and CALL instructions were placed to a nonexistent label.
(2) The CJ instruction was placed to the global label. (Branching is possible only with the CALL instruction.)
Remedy
Check the branch destination of the CJ and CALL instructions existing in the steps occurred.

Details
Label duplication error (Before executing PLC)
(1) When using the multi-programming method:
- Labels of common pointer are duplicated
- Labels of local pointer are duplicated within the same file
(2) When using the independent program method, labels are duplicated.
Remedy
Correct the duplication of the labels existing in the steps occurred.

Details
Local label over (Before executing PLC)
* "Local label" is as "labels of local pointer".
The boundary value set with the PC parameter (common pointer boundary value) has been exceeded by the total number of labels of local pointer.
Remedy
(1) Reduce the number of local labels used.
- Use as sequentially as possible from P0.
(2) Reset the PC parameter (common pointer boundary value).

Details
Global label boundary value error (Before executing PLC)
* "Global label" is as "labels of common pointer".
The content of PC parameter (common pointer boundary value) is not normal.
(1) When using the multi-programming method, a value greater than the maximum value is set.
(2) When using the independent program method, the label boundary value of common pointer is set.
Remedy
(1) When using the multi-programming method, correct the common pointer boundary value to an appropriate value.
(2) When using the independent program method, delete the common pointer boundary value.
Reserved label error (Before executing PLC)

(1) When using the multi-programming method, disabled reserved label exists.
(2) When using the independent program method, reserved labels are duplicated.

Remedy

(1) When using the multi-programming method, delete the reserved label.
(2) When using the independent program method:
   - Delete the PC parameter program settings.
   - Correct the duplication of reserved labels.

Program setting error (Before executing PLC)

(1) When using the multi-programming method, PC parameter setting is not correct.
   - PC parameter (program setting) is not set.
   - Unstored program name is set.
   - The contents of the program name is abnormal.
   - More than the maximum number of programs that can be set (120 programs) are set.
(2) When using the independent program method, multiple programs are stored.
(3) When the multi-project is valid, the sum of all projects exceeds the number of the programs which can be set (120 programs).

Remedy

(1) When using the multi-programming method, check the PC parameter program settings.
   - Check the program settings.
   - Check the program name stored in the NC.
   - Review the program name and rename it if necessary.
     e.g. The program name and the M device number in the PLC program are overlapped.
   - Set the number to 120 or less.
(2) When using the independent program method:
   - Store only one program file.
(3) When the multi-project is valid, set the number of programs that can be set to be less than 120 programs as the sum of all projects.

RET instruction error

(1) RET instruction was not executed at the branch destination of the CALL instruction.
(2) RET instruction was executed without execution of CALL instruction.

Remedy

Check the following matters for the entire sequence program to be executed.
(1) Check if RET instruction is programmed at the end of sub-routine
(2) Check if diverged to the other operation in the middle of sub-routine and RET instruction is not executed.
(3) Check if jumped to the END reservation label (P4005) in the middle of sub-routine.
(4) Check if there is delimiter (FEND instruction) between adjacent program and sub-routine program.

Ladder code error (Before executing PLC)

An error was found in data for the sequence program to be executed.
(1) Disabled PLC instruction is used.
(2) Sequence program stored in the built-in ROM is broken.
(3) Sequence program under development (before writing into the built-in ROM) is broken.

Remedy

Transferring, storing and F-ROM writing of the sequence program must be re-executed with the GX Developer/ GX Works2 or PLC on-board edit function.
### U10 Illegal PLC 0x280*

**Details**
- No main processing ladders (Before executing PLC)
- Main processing program to be executed cannot be identified.
  
  1. When using the multi-programming method, main processing "scan" is not set in the PC parameter (program setting).
  
  2. When using the independent program method, no reservation ladder for the main processing ladder is available.

**Remedy**
- (1) When using the multi-programming method, check the PC parameter program settings.
- (2) When using the independent program method, add the reservation label (P4002) for the medium speed ladder.

### U10 Illegal PLC 0x29xx.yy

**Details**
- Execution area over (Before executing PLC)
  - The total number of steps for the ladder to be executed has exceeded the size of PLC processor execution area.

**Remedy**
- Check the PC parameter (program setting) and set so that the total number of steps for the ladder to be executed does not exceed the PLC processor execution area.

### U10 Illegal PLC 0x30xx.yy Step No.

**Details**
- FOR instruction nesting over
  - 17th level of nesting for FOR instruction was executed.

**Remedy**
- Check the number of FOR instruction's nesting depth in the steps to which the error occurred, and limit the number to 16 or less.

### U10 Illegal PLC 0x31xx.yy Step No.

**Details**
- NEXT instruction error
  - (1) NEXT instruction was executed before FOR instruction.
  - (2) After FOR instruction, END(FEND) was executed before NEXT instruction.

**Remedy**
- (1) Check and correct the NEXT instruction in the step to which the error occurred.
- (2) Check and correct the ladder circuit of the program to which the error occurred. (Note that the step No. at the error position is displayed as "0").
  - Check if JMP,CALL,CJ instructions were executed between FOR and NEXT instruction, and NEXT instruction was jumped.
  - Check if FOR instruction and NEXT instruction are all paired.

### U10 Illegal PLC 0x32xx.yy Step No.

**Details**
- BREAK instruction error
  - BREAK was executed outside the range between FOR and NEXT instruction.

**Remedy**
- Check and correct the BREAK instruction in the step to which the error occurred.

### U10 Illegal PLC 0x400*

**Details**
- PLC system error

**Remedy**
- Contact Mitsubishi.
Details
Maximum project No. illegal (at PLC system startup)
Multi-project parameter setting is illegal (due to the following reason).
• The value outside the setting range (1 to number of usable project) was detected.

Remedy
(1) Check the presence of the expansion project additional specification and reconsider the setting range.
(2) The multi-project parameter (maximum project No.) setting is illegal. Set the multi-project parameter again.
(3) If (1) or (2) does not solve the problem, there is a possibility that the NC system is broken. Contact Mitsubishi.

Details
Multi-project parameter setting is illegal (due to the following reason).
• The value outside the setting range (1 to number of usable project) was detected.

Remedy
(1) Check the presence of the expansion project additional specification and reconsider the setting range.
(2) The multi-project parameter (maximum project No.) setting is illegal. Set the multi-project parameter again.
(3) If (1) or (2) does not solve the problem, there is a possibility that the NC system is broken. Contact Mitsubishi.

Details
Multi-project parameter setting is illegal (due to the following reason).
• The value outside the setting range (1 to number of usable project) was detected.

Remedy
(1) Check the presence of the expansion project additional specification and reconsider the setting range.
(2) The multi-project parameter (maximum project No.) setting is illegal. Set the multi-project parameter again.
(3) If (1) or (2) does not solve the problem, there is a possibility that the NC system is broken. Contact Mitsubishi.

Details
Multi-project parameter setting is illegal (due to the following reason).
• The value outside the setting range (1 to number of usable project) was detected.

Remedy
(1) Check the presence of the expansion project additional specification and reconsider the setting range.
(2) The multi-project parameter (maximum project No.) setting is illegal. Set the multi-project parameter again.
(3) If (1) or (2) does not solve the problem, there is a possibility that the NC system is broken. Contact Mitsubishi.

Details
Multi-project parameter setting is illegal (due to the following reason).
• The value outside the setting range (1 to number of usable project) was detected.

Remedy
(1) Check the presence of the expansion project additional specification and reconsider the setting range.
(2) The multi-project parameter (maximum project No.) setting is illegal. Set the multi-project parameter again.
(3) If (1) or (2) does not solve the problem, there is a possibility that the NC system is broken. Contact Mitsubishi.

Details
Multi-project parameter setting is illegal (due to the following reason).
• The value outside the setting range (1 to number of usable project) was detected.

Remedy
(1) Check the presence of the expansion project additional specification and reconsider the setting range.
(2) The multi-project parameter (maximum project No.) setting is illegal. Set the multi-project parameter again.
(3) If (1) or (2) does not solve the problem, there is a possibility that the NC system is broken. Contact Mitsubishi.
Execution project illegal (at the PLC system startup)
Multi-project parameter setting is illegal (due to the following reasons).
• The value outside the setting range (ON/OFF) was detected.
• All execution projects are OFF.

Remedy
(1) The multi-project parameter (execution project) setting is illegal. Set the multi-project parameter again.
(2) If (1) does not solve the problem, there is a possibility that the NC system is broken. Contact Mitsubishi.

Details
Project execution order illegal (at the PLC system startup)
Multi-project parameter setting is illegal (due to the following reasons).
• The value outside the setting range (1 to 6) was detected.
• The redundant project execution order number was detected.

Remedy
(1) The multi-project parameter (project execution order) setting is illegal. Set the multi-project parameter again.
(2) If (1) does not solve the problem, there is a possibility that the NC system is broken. Contact Mitsubishi.

Details
Parameter setting illegal for the number of common device points (at PLC system startup)
Multi-project parameter setting is illegal (due to the following reasons).
• The value outside the setting range (0 to the minimum number of points in all projects) was detected.
• It was detected that the number of points was not a multiple of 16.

Remedy
(1) Check the presence of the expansion project additional specification and reconsider the setting range.
(2) The multi-project parameter setting is illegal. Set the multi-project parameter again.
(3) If (1) or (2) does not solve the problem, there is a possibility that the NC system is broken. Contact Mitsubishi.

Details
Parameter setting illegal for number of device points (at PLC system startup)
The parameter setting for the number of device points is illegal (due to the following reasons).
• The total number of points in one project 29K or more was set.
• The illegal value (-1 point or less, or 61441 points or more) for the number of device points was detected.
• It was detected that the number of device points was not a multiple of 16.
• The number outside the usable number of device points in whole projects was detected.

Remedy
(1) The parameter setting for the number of device points is illegal. Set the parameter of the number of device points again and reboot the system.
(2) If (1) does not solve the problem, there is a possibility that the NC system is broken. Contact Mitsubishi.

Details
Caution; Ladder program writing during RUN is disabled (In independent program method)
With RUN write ON, sequence program is operated in independent program method. Run write is not available with this condition.

Remedy
The ladder program writing (RUN write) can not be used in independent program method.
Disable RUN write, or change the method into multi-program one.
### U10 Illegal PLC

<table>
<thead>
<tr>
<th></th>
<th>0x71xx.yy</th>

### U55  PLC stopped / is not saved

**Details**
The ladder is stopped and the edited sequence program is not stored in the built-in ROM.
(The contents of temporary memory area and sequence program in the built-in ROM are mismatched.)

**Remedy**
Run the PLC.
Use GX Developer/GX Works2 or the built-in PLC edit function to perform write to the built-in ROM.

### U60  Ladder is not saved

**Details**
The edited sequence program is not stored in the built-in ROM.
(The contents of temporary memory area and sequence program in the built-in ROM are mismatched.)

**Remedy**
Use GX Developer/GX Works2 or the built-in PLC edit function to perform write to the built-in ROM.

</tr>
</tbody>
</table>
### N009 Password error

**Details**
- The file reception failed in machining data sharing due to a wrong password.

**Remedy**
- Input the password again.

### N010 Customer number error

**Details**
- The file reception failed in machining data sharing due to a wrong customer number.

**Remedy**
- Input the customer number again.

### N011 Storage capacity over

**Details**
- The file reception failed in machining data sharing because the size of the file to be received is bigger than free space in the NC.

**Remedy**
- Ensure sufficient free space in the NC.

### N012 File deletion error

**Details**
- A file on Anshin-net server cannot be deleted in machining data sharing.

**Remedy**
- Confirm that the file exists on Anshin-net server.
- Note down how the error occurred and contact the service center.
Program Errors (P)
These alarms occur during automatic operation, and the causes of these alarms are mainly program errors which occur, for instance, when mistakes have been made in the preparation of the machining programs or when programs which conform to the specification have not been prepared.

**P10 No. of simultaneous axes over**

**Details**
The number of axis addresses commanded in a block is exceeds the specifications.

**Remedy**
- Divide the alarm block command into two.
- Check the specifications.

**P11 Illegal axis address**

**Details**
The axis address commanded by the program does not match any of the ones set by the parameter.

**Remedy**
- Correct the axis names in the program.

**P20 Division error**

**Details**
- The issued axis command cannot be divided by the command unit.
- A cutting feed command has been issued to the index table indexing axis when the parameter "#2580 index_ Gcmd" is set to "1".

**Remedy**
- Correct the program.

**P29 Not accept command**

**Details**
The command has been issued when it is impossible.
- The normal line control command (G40.1, G41.1, G42.1) has been issued during the modal in which the normal line control is not acceptable.
- The command has been issued during the modal in which the two-part system simultaneous thread cutting is not acceptable.
- A workpiece coordinate system preset command (G92.1) has been issued during tool length compensation, nose R compensation or tool radius compensation.

**Remedy**
- Correct the program.

**P30 Parity H error**

**Details**
The number of holes per character on the paper tape is even for EIA code and odd for ISO code.

**Remedy**
- Check the paper tape.
- Check the tape puncher and tape reader.

**P31 Parity V error**

**Details**
The number of characters per block on the paper tape is odd.

**Remedy**
- Make the number of characters per block on the paper tape even.
- Set the parameter parity V selection OFF.
12 Program Errors (P)

P32 Illegal address

Details
An address not listed in the specifications has been used.

Remedy
• Correct the program address.
• Correct the parameter settings.
• Check the specifications.

P33 Format error

Details
The command format in the program is not correct.

Remedy
• Correct the program.

P34 Illegal G code

Details
• The commanded G code is not in the specifications.
An illegal G code was commanded during the coordinate rotation command.
• G51.2 or G50.2 was commanded when the rotary tool axis No. (the parameter "#1501polyax") was set to "0".
G51.2 or G50.2 was commanded when the tool axis was set to the linear axis (the parameter "#1017 rot" = 0).

Remedy
• Check and correct the G code address in the program.
• Check the parameter setting values.

P35 Setting value range over

Details
The setting range for the addresses has been exceeded.

Remedy
• Correct the program.

P36 Program end error

Details
"EOR" has been read during tape and memory mode.

Remedy
• Enter the M02 and M30 command at the end of the program.
• Enter the M99 command at the end of the subprogram.

P37 O, N number zero

Details
"0" has been specified for program or sequence No.

Remedy
• Designate program Nos. within a range from 1 to 99999999.
• Designate sequence Nos. within a range from 1 to 99999999.

P38 No spec: Add. Op block skip

Details
"/n" has been issued while the optional block skip addition is not in the specifications.

Remedy
• Check the specifications.
12 Program Errors (P)

**P39** No specifications

**Details**
- A non-specified G code was commanded.
- The selected operation mode is out of the option setting.
- The selected operation mode is out of the parameter setting.

**Remedy**
- Check the specifications.
- Check the parameter setting values.

---

**P40** Pre-read block error

**Details**
When tool radius compensation is executed, there is an error in the pre-read block and so the interference check is disabled.

**Remedy**
- Reconsider the program.

---

**P45** G code combination error

**Details**
The combination of G codes in a block is inappropriate.
A part of unmodal G codes and modal G codes cannot be commanded in a same block.

**Remedy**
- Correct the combination of G codes.
- Separate the incompatible G codes into different blocks.

---

**P48** Restart pos return incomplete

**Details**
A travel command was issued before the execution of the block that had been restart-searched.

**Remedy**
- Carry out program restart again.
- Travel command cannot be executed before the execution of the block that has been restart-searched.

---

**P49** Invalid restart search

**Details**
Restart search was attempted for a block that comes after any of the following command blocks:
3-dimensional circular interpolation, cylindrical interpolation, polar coordinate interpolation, milling interpolation, tool center point control, simple tool center point control, inclined surface machining, simple inclined surface machining, workpiece installation error compensation, axis name switch, mixed control, machining condition selection I, sub part system control I, sub part system control II, or direct command mode.

**Remedy**
- Reconsider the restart search position.

---

**P50** No spec: Inch/Metric change

**Details**
Inch/Metric changeover (G20/G21) command was issued while the function is out of specifications.

**Remedy**
- Check the specifications.

---

**P60** Compensation length over

**Details**
The commanded movement distance is excessive (over $2^{31}$).

**Remedy**
- Correct the command range for the axis address.
### P61 Unidirectional posit.

**Details**
Unidirectional positioning (G60) was commanded while the function is out of specifications.

**Remedy**
- Check the specifications.

### P62 No F command

**Details**
- No feed rate command has been issued.
- There is no F command in the cylindrical interpolation or polar coordinate interpolation immediately after the G95 mode is commanded.

**Remedy**
- The default movement modal command at power ON is G01. This causes the machine to move without a G01 command if a movement command is issued in the program, and an alarm results. Use an F command to specify the feed rate.
- Specify F with a thread lead command.

### P65 High speed mode III

**Details**
- Check whether the specifications are provided for the high-speed mode III.

### P67 F value is exceeding the limit

**Details**
F’s value in an F or ,F command is exceeding the command range.

**Remedy**
- Check and correct F or ,F command in the program.

### P70 Arc end point deviation large

**Details**
- There is an error in the arc start and end points as well as in the arc center.
- The difference of the involute curve through the start point and the end point is large.
- When arc was commanded, one of the two axes configuring the arc plane was a scaling valid axis.

**Remedy**
- Correct the numerical values of the addresses that specify the start and end points, arc center as well as the radius in the program.
- Correct the “+” and “-” directions of the address numerical values.
- Check for the scaling valid axis.

### P71 Arc center error

**Details**
- An arc center cannot be obtained in R-specified circular interpolation.
- A curvature center of the involute curve cannot be obtained.

**Remedy**
- Correct the numerical values of the addresses in the program.
- Correct the start and end points if they are inside of the base circle for involute interpolation. When carrying out tool radius compensation, make sure that the start and end points after compensation will not be inside of the base circle for involute interpolation.
- Correct the start and end points if they are at an even distance from the center of the base circle for involute interpolation.

### P151  Radius compen during arc mode

**Details**
A compensation command (G40, G41, G42, G43, G44, or G46) has been issued in the arc modal (G02 or G03).

**Remedy**
- Issue the linear command (G01) or rapid traverse command (G00) in the compensation command block or cancel block.
- (Set the modal to linear interpolation.)

### P152  No intersection

**Details**
- In interference block processing during execution of a tool radius compensation (G41 or G42) or nose R compensation (G41, G42, or G46) command, the intersection point after one block is skipped cannot be determined.
- The 3-dimensional tool radius compensation value (tool vertical direction compensation) (G41.2 or G42.2) cannot be determined.

**Remedy**
- Correct the program.

### P153  Compensation interference

**Details**
An interference error has occurred while the tool radius compensation command (G41 or G42) or nose R compensation command (G41, G42 or G46) was being executed.

**Remedy**
- Correct the program.

### P154  No spec: 3D compensation

**Details**
A three-dimensional compensation command was issued though it is out of specifications.

**Remedy**
- Check the specifications.

### P155  Fixed cyc exec during compen

**Details**
A fixed cycle command has been issued in the radius compensation mode.

**Remedy**
- Issue a radius compensation cancel command (G40) to cancel the radius compensation mode that has been applied since the fixed cycle command was issued.

### P156  R compen direction not defined

**Details**
A shift vector with undefined compensation direction was found at the start of G46 nose R compensation.

**Remedy**
- Change the vector to that which has the defined compensation direction.
- Change the tool to that which has a different tip point No.

### P157  R compen direction changed

**Details**
During G46 nose R compensation, the compensation direction is reversed.

**Remedy**
- Change the G command to that which allows the reversed compensation direction (G00, G28, G30, G33, or G53).
- Change the tool to that which has a different tip point No.
- Enable "#8106 G46 NO REV-ERR".
### P158  Illegal tip point

**Details**
An illegal tip point No. (other than 1 to 8) was found during G46 nose R compensation.

**Remedy**
- Correct the tip point No.

### P161  No spec: 3D tool R comp

**Details**
3-dimensional tool radius compensation (tool vertical direction compensation) is not included in the specifications.

**Remedy**
- Check the specifications.

### P162  Disable Cmd in 3D tool R comp

**Details**
A command (G or T command, etc.) was issued during 3-dimensional tool radius compensation (tool vertical direction compensation), although it is disabled during the compensation.

**Remedy**
- Cancel 3-dimensional tool radius compensation (tool vertical direction compensation).

### P163  3D tool R comp is disabled

**Details**
3-dimensional tool radius compensation (tool vertical direction compensation) was commanded in a mode where the command is disabled.

**Remedy**
- Cancel the mode that disables the command.

### P170  No offset number

**Details**
- No compensation No. (DOO, TOO or HOO) command was given when the radius compensation (G41, G42, G43 or G46) command was issued. Otherwise, the compensation No. is larger than the number of sets in the specifications.
- H99 or D99 is commanded with the parameter "#1227 aux11/bit1" enabled when the length compensation method and radius compensation method are set to "1" or "2" for the M system tool life management II.

**Remedy**
- Add the compensation No. command to the compensation command block.
- Check the number of sets for the tool compensation Nos. and correct the compensation No. command to be within the number of sets.
- H99 and D99 commands cannot be used when the length compensation method and radius compensation are set to "1" or "2". Set the length compensation method and radius compensation method to "0".

### P171  No spec: Comp input by prog G10

**Details**
Compensation data input by program (G10) was commanded though it is out of specifications.

**Remedy**
- Check the specifications.

### P172  G10 L number error

**Details**
An address of G10 command is not correct.

**Remedy**
- Correct the address L No. of the G10 command.

<td>G10 P number error</td>
<td>The compensation No. at the G10 command is not within the permitted number of sets in the specifications.</td>
<td>Check the number of sets for the tool compensation Nos. and correct the address P designation to be within the number of sets.</td>
</tr>
<tr>
<td>P174</td>
<td>No spec: Comp input by prog G11</td>
<td>Compensation data input by program cancel (G11) was commanded though there is no specification of compensation data input by program.</td>
<td>Check the specifications.</td>
</tr>
<tr>
<td>P177</td>
<td>Tool life count active</td>
<td>Registration of tool life management data with G10 was attempted when the &quot;usage data count valid&quot; signal was ON.</td>
<td>The tool life management data cannot be registered during the usage data count. Turn the &quot;usage data count valid&quot; signal OFF.</td>
</tr>
<tr>
<td>P178</td>
<td>Tool life data entry over</td>
<td>The number of registration groups, total number of registered tools or the number of registrations per group exceeded the range in the specifications.</td>
<td>Correct the number of registrations.</td>
</tr>
<tr>
<td>P179</td>
<td>Illegal group No.</td>
<td>• A duplicate group No. was found at the registration of the tool life management data with G10.</td>
<td>Register the estimated tool life data/cumulative usage data once for one group: commanding with a duplicate group No. is not allowed. Correct to the group No.</td>
</tr>
<tr>
<td>P180</td>
<td>No spec: Drilling cycle</td>
<td>A fixed cycle command (G72 - G89) was issued though it is out of specifications.</td>
<td>Check the specifications. Correct the program.</td>
</tr>
<tr>
<td>P181</td>
<td>No spindle command (Tap cycle)</td>
<td>Spindle rotation speed (S) has not been commanded in synchronous tapping.</td>
<td>Command the spindle rotation speed (S) in synchronous tapping. When &quot;#8125 Check Scode in G84&quot; is set to &quot;1&quot;, enter the S command in the same block where the synchronous tapping command is issued.</td>
</tr>
</tbody>
</table>
Details
- Connection to the main spindle unit was not established.
- The synchronous tapping was attempted with the spindle not serially connected under the multiple-spindle control.
- Synchronous tapping command was given to the analog spindle while analog spindle synchronous tapping was unavailable.

Remedy
- Check connection to the main spindle.
- Check that the main spindle encoder exists.
- Set 1 to the parameter #3024 (sout).
- Correct the program.

---

Details
- The pitch or number of threads has not been commanded in the tap cycle of a fixed cycle for drilling command.

Remedy
- Specify the pitch data and the number of threads by F or E command.

---

Details
- The pitch or the number of threads per inch is illegal in the tap cycle of the fixed cycle for drilling command.
- The pitch is too small for the spindle rotation speed.
- The thread number is too large for the spindle rotation speed.

Remedy
- Correct the pitch or the number of threads per inch.

---

Details
- Synchronous tapping cycle (G84/G74) was commanded though it is out of specifications.

Remedy
- Check the specifications.

---

Details
- S command was issued during synchronous tapping modal.

Remedy
- Cancel the synchronous tapping before issuing the S command.

---

Details
- A lathe cutting cycle command was issued though it is out of specifications.

Remedy
- Check the specification.
- Delete the lathe cutting cycle command.

---

Details
- In the lathe cutting cycle, the specified length of taper section is illegal.

Remedy
- Set the smaller radius value than the axis travel amount in the lathe cycle command.

---

Details
- Chamfering in the thread cutting cycle is illegal.

Remedy
- Set a chamfering amount not exceeding the cycle.
P199  Tool selection is incorrect
Details
A turning tool shape compensation was commanded while a tool other than turning tool has been selected.
Remedy
- Select "Lathing" for tool type in tool management data before giving the turning tool shape compensation command.

P200  No spec: MRC cycle
Details
The compound type fixed cycle for turning machining I (G70 to G73) was commanded though it is out of specifications.
Remedy
- Check the specifications.

P201  Program error (MRC)
Details
- The subprogram, called with a compound type fixed cycle for turning machining I command, has at least one of the following commands: reference position return command (G27, G28, G29, G30); thread cutting (G33, G34); fixed cycle skip-function (G31, G31.n).
- An arc command was found in the first movement block of the finished shape program in compound type fixed cycle for turning machining I.
Remedy
- Delete G27, G28, G29, G30, G31, G33, G34, and fixed cycle G codes from the subprogram called with the compound type fixed cycle for turning machining I commands (G70 to G73).
- Delete G02 and G03 from the first movement block of the finished shape program in compound type fixed cycle for turning machining I.

P202  Block over (MRC)
Details
The number of blocks in the shape program of the compound type fixed cycle for turning machining I is over 50 or 200 (the maximum number differs according to the model).
Remedy
- Set a 50/200 or less value for the number of blocks in the shape program called by the compound type fixed cycle for turning machining I commands (G70 to G73). (The maximum number differs according to the model).

P203  D cmnd figure error (MRC)
Details
A proper shape will not obtained by executing the shape program for the compound type fixed cycle for turning machining I (G70 to G73).
Remedy
- Correct the shape program for the compound type fixed cycle for turning machining I (G70 to G73).

P204  E cmnd fixed cycle error
Details
A command value of the compound type fixed cycle for turning machining (G70 to G76) is illegal.
Remedy
- Correct the command value of the compound type fixed cycle for turning machining (G70 to G76).

P210  No spec: Pattern cycle
Details
A compound type fixed cycle for turning machining II (G74 to G76) command was commanded though it is out of specifications.
Remedy
- Check the specifications.

</tbody>
</table>
**P235**  Program editing

**Details**
Operation was attempted for the file under program editing.

**Remedy**
- Execute the program again after completion of program editing.

**P240**  No spec: Variable commands

**Details**
A variable command (with #) was issued though it is out of specifications.

**Remedy**
- Check the specifications.

**P241**  No variable No.

**Details**
The variable No. commanded is out of the range specified in the specifications.

**Remedy**
- Check the specifications.
- Correct the program variable No.

**P242**  = not defined at vrble set

**Details**
The "=" sign has not been commanded when a variable is defined.

**Remedy**
- Designate the "=" sign in the variable definition of the program.

**P243**  Can't use variables

**Details**
- An invalid variable has been specified in the left or right side of an operation expression.
- Assignment to a write-protected variable has been commanded.

**Remedy**
- Correct the program.

**P244**  Invalid set date or time

**Details**
Date or time was set earlier than current date or time in the system variables (#3011, #3012) when the system lock was valid.

**Remedy**
- Date or time cannot be changed.
- Correct the program.

**P245**  Tool No. error

**Details**
- Tool data read/write command has been executed without selecting the tool command method.
- Tool command method (#68000) or tool selection No. (#68001) is incorrect.
  1. The tool specified as "Tool in use" is not installed.
  2. Any unregistered tool No. has been designated.
  3. Tool selection No. (#68001) has not been designated.
- Write of "Tool No." has been commanded using #68001 while tool No. is being designated.
- Write of "Tool No." has been commanded for an already registered tool No.

**Remedy**
- Check the program to make sure that the tool command method (#68000) and tool selection No. (#68001) are correct.
- Make sure, if you wish to designate a tool in use, that the said tool No. is nonzero and is already registered on the tool management screen.
- Make sure, if you wish to designate a tool No., that the tool No. registered on the tool management screen has been commanded using #68001.
- #68001 is unable to write the same tool No. as that already registered on the tool management screen.

</table>
P371  Facing t-post MR illegal

Details
- Mirror image for facing tool posts was commanded to an axis in external mirror image or parameter mirror image.
- The commanded mirror image for facing tool posts enables the mirror image for a rotary axis.

Remedy
- Correct the program.
- Correct the parameter settings.

P380  No spec: Corner R/C

Details
- The corner R/C was issued though it is out of specifications.

Remedy
- Check the specifications.
- Delete the corner chamfering/corner rounding command in the program.

P381  No spec: Arc R/C

Details
- Corner chamfering II or corner rounding II was commanded in the arc interpolation block though it is out of specifications.

Remedy
- Check the specifications.

P382  No corner movement

Details
- The block next to corner chamfering/corner rounding is not a travel command.

Remedy
- Replace the block succeeding the corner chamfering/corner rounding command by G01 command.

P383  Corner movement short

Details
- The travel distance in the corner chamfering/corner rounding command was shorter than the value in the corner chamfering/corner rounding command.

Remedy
- Set the smaller value for the corner chamfering/corner rounding than the travel distance.

P384  Corner next movement short

Details
- The travel distance in the following block in the corner chamfering/corner rounding command was shorter than the value in the corner chamfering/corner rounding command.

Remedy
- Set the smaller value for the corner chamfering/corner rounding than the travel distance in the following block.

P385  Corner during G00/G33

Details
- A block with corner chamfering/corner rounding was given during G00 or G33 modal.

Remedy
- Correct the program.

P390  No spec: Geometric

Details
- A geometric command was issued though it is out of specifications.

Remedy
- Check the specifications.

12 Program Errors (P)

P411  Illegal modal G111

Details
- G111 was issued during milling mode.
- G111 was issued during nose R compensation mode.
- G111 was issued during constant surface speed.
- G111 was issued during mixed control (cross axis control).
- G111 was issued during fixed cycle.
- G111 was issued during polar coordinate interpolation.
- G111 was issued during cylindrical interpolation mode.

Remedy
- Before commanding G111, cancel the following commands.
- Milling mode
- Nose R compensation
- Constant surface speed
- Mixed control (cross axis control)
- Fixed cycle
- Polar coordinate interpolation
- Cylindrical interpolation

P412  No spec: Axis name switch

Details
Axis name switch (G111) was issued though it is out of specifications.

Remedy
- Check the specifications.

P420  No spec: Para input by program

Details
Parameter input by program (G10) was commanded though it is out of specifications.

Remedy
- Check the specifications.

P421  Parameter input error

Details
- The specified parameter No. or set data is illegal.
- An illegal G command address was input in parameter input mode.
- A parameter input command was issued during fixed cycle modal or nose R compensation.
- G10L50, G10L70, G10L100, G11 were not commanded in independent blocks.

Remedy
- Correct the program.

P422  Tool/Work shape input error

Details
- G10 L100, G10 L101 or G11 has been given together with any other command in a block.
- Address P or T has been omitted from G10 L100.
- Address C has been omitted from G10 L101.

Remedy
- Correct the program.
### P423  R-Navi input error

**Details**
- G10 L110, G10 L111 or G11 has been given together with any other command in a block.
- Address Q has been omitted from G10 L110.
- Address P, Q or D has been omitted from G10 L111.
- Machining surface parameter input command has been issued for an undefined workpiece.
- An index angle command has been given to any axis other than Z when using the coordinate axis direction setting method.
- Neither the workpiece registration No. nor surface registration No. has been selected when setting a machining surface.

**Remedy**
- Correct the program.
- Correct the setting of workpiece to machine.

### P430  R-pnt return incomplete

**Details**
- A command was issued to move an axis, which has not returned to the reference position, away from that reference position.
- A command was issued to an axis removal axis.

**Remedy**
- Execute reference position return manually.
- Disable the axis removal on the axis for which the command was issued.

### P431  No spec: 2,3,4th R-point ret

**Details**
- A command for second, third or fourth reference position return was issued though there are no such command specifications.

**Remedy**
- Check the specifications.

### P432  No spec: Start position return

**Details**
- Start position return (G29) was commanded though it is out of specifications.

**Remedy**
- Check the specifications.

### P433  No spec: R-position check

**Details**
- Reference position check (G27) was commanded though it is out of specifications.

**Remedy**
- Check the specifications.

### P434  Compare error

**Details**
- One of the axes did not return to the reference position when the reference position check command (G27) was executed.

**Remedy**
- Correct the program.

### P435  G27 and M commands in a block

**Details**
- An M command was issued simultaneously in the G27 command block.

**Remedy**
- Place the M code command, which cannot be issued in a G27 command block, in separate block from G27 command block.
Details
An M command was issued simultaneously in the G29 command block.

Remedy
• Place the M code command, which cannot be issued in a G29 command block, in separate block from G29 command block.

Details
A local coordinate system command was issued during execution of the G54.1 command.

Remedy
• Correct the program.

Details
The chuck barrier on command (G22) was specified although the chuck barrier is out of specifications.

Remedy
• Check the specifications.

Details
Stroke check before travel (G22/G23) was commanded though it is out of specifications.

Remedy
• Check the specifications.

Details
An illegal command, which places the axis travel start/end point in the prohibited area or moves the axis through the prohibited area, was detected when Stroke check before travel (G22) was commanded.

Remedy
• Correct the coordinate values of the axis address commanded in the program.

Details
An error has occurred in the tape reader. Otherwise an error has occurred in the printer during macro printing.

Remedy
• Check the power and cable of the connected devices.
• Correct the I/O device parameters.

Details
A file of the machining program cannot be read.

Remedy
• In memory mode, the programs stored in memory may have been destroyed. Output all of the programs and tool data and then format the system.
• Ensure that the external device (including SD card/USB memory) that contains the file is mounted.
• Correct the parameter settings for HD operation, SD card operation or USB memory operation.

Details
A communication error occurred during the BTR operation.

Remedy
• "L01 Computer link error" is displayed simultaneously. Take the remedy corresponding to the error No.

P485  Illegal modal (mill)

Details

• The milling mode was turned ON during nose R compensation or constant surface speed control.
• A T command was issued during the milling mode.
• The mode was switched from milling to cutting during tool compensation.
• Cylindrical interpolation or polar coordinate interpolation was commanded during the constant surface speed control mode (G96).
• The command unacceptable in the cylindrical interpolation was issued.
• A T command was issued during the cylindrical interpolation or polar coordinate interpolation mode.
• A movement command was issued when the plane was not selected just before or after the G07.1 command.
• A plane selection command was issued during the polar coordinate interpolation mode.
• Cylindrical interpolation or polar coordinate interpolation was commanded during tool radius compensation.
• The G16 plane in which the radius value of a cylinder is "0" was specified.
• A cylindrical interpolation or polar coordinate interpolation command was issued during coordinate rotation by program.

Remedy

• Correct the program.
• Issue G40 or G97 before issuing G12.1.
• Issue a T command before issuing G12.1.
• Issue G40 before issuing G13.1.
• Specify the radius value of a cylinder other than "0", or specify the X axis's current value other than "0" before issuing G12.1/G16.

P486  Milling error

Details

• The milling command was issued during the mirror image (when parameter or external input is turned ON).
• Polar coordinate interpolation, cylindrical interpolation or milling interpolation was commanded during mirror image for facing tool posts.
• The start command of the cylindrical interpolation or polar coordinate interpolation was issued during the normal line control.

Remedy

• Correct the program.
### P501  Cross (G110) impossible

**Details**
Mixed control command (G110), Arbitrary axis exchange command (G140), Arbitrary axis exchange return command (G141) or Base axis configuration restore command (G142) has been given to a part system that is under any of the following state.
- Cylindrical interpolation mode
- Polar coordinate interpolation mode
- Milling interpolation mode
- Constant surface speed control mode
- Polygon cut mode
- Hob machining mode
- Nose R compensation mode
- Tool radius compensation mode
- During axis name switch
- Fixed cycle for drilling
- Fixed cycle for lathe turning
- Compound-type fixed cycle mode
- Special fixed cycle mode
- Facing turret mirror image mode
- Balance cut mode
- Chuck barrier/Tailstock barrier
- Stroke check before travel
- During Macro modal call (G66.1)
- Hypothetical axis interpolation mode
- Figure rotation mode
- During scaling
- Coordinate rotation by parameter mode
- Polar coordinate command mode
- Normal line control mode
- Circular cutting mode
- Tool direction tool length compensation mode

**Remedy**
- Correct the program.

### P503  Illegal G110 axis

**Details**
Any of the following commands was given to an axis that is under the following conditions: Mixed control command, Arbitrary axis exchange command, Arbitrary axis exchange return command or Basic axis configuration return command.
- The commanded axis does not exist.
- The command caused the maximum number of axes per part system to be exceeded.
- The command was given to an axis for which axis exchange is disabled.

**Remedy**
- Correct the program.

### P511  Synchronization M code error

**Details**
- Two or more synchronization M codes were commanded in the same block.
- The synchronization M code and "$" code were commanded in the same block.
- Synchronization with the M code was commanded in 3rd part system or more. (Synchronization with the M code is valid only in 1st part system or 2nd part system.)

**Remedy**
- Correct the program.

### P520  Control axis superimposition/Designated axis illegal

**Details**
- The axis designated as the reference or superimposed axis is not available for superimposition.

**Remedy**
- Correct the program.

</tr>
</tbody>
</table>
P554 Invid manual interrupt in G6.2

Details
Manual interruption was executed in a block that applies the G06.2 mode.

Remedy
- Execute the manual interruption in the block that does not apply the G06.2 mode.

P555 Invalid restart during G06.2

Details
Restart was attempted from the block that applies G06.2 mode.

Remedy
- Restart from the block other than in G06.2 mode.

P560 Fairing changeover disabled

Details
- A command to enable the fairing function was given while the smooth fairing function was ON.
- A command to enable the smooth fairing function was given while the fairing function was ON.

Remedy
- Correct the program.

P595 Skip axis illegal

Details
- No axis or more than 2 axes were issued to torque limitation skip command block.
- An axis during synchronous control was issued as the skip axis.
- An axis during inclined axis control was issued as the skip axis.
- Geometric command, corner R, or corner chamfering was issued in the same block as torque limitation skip command.
- A torque skip was commanded to the axis which is in the constant torque control or the proportional torque stopper control.

Remedy
- Issue only an axis to the skip axis.
- Review the program.

P600 No spec: Auto TLM

Details
An automatic tool length measurement command (G37) was issued though it is out of specifications.

Remedy
- Check the specifications.

P601 No spec: Skip

Details
A skip command (G31) was issued though it is out of specifications.

Remedy
- Check the specifications.

P602 No spec: Multi skip

Details
A multiple skip command (G31.1, G31.2, G31.3 or G31 Pn) was issued though it is out of specifications.

Remedy
- Check the specifications.

P603 Skip speed 0

Details
The skip speed is "0".

Remedy
- Specify the skip speed.

P657 PLC Device too much

Details
Multiple assignment expressions which include the PLC direct interface command are commanded to the same block.

Remedy
• Command the assignment command using PLC direct interface by itself.

P700 Illegal command value

Details
Spindle synchronization was commanded to a spindle that is not connected serially.

Remedy
• Correct the program.
• Correct the parameter settings.

P705 Dia/Rad selection cmd invalid

Details
G10.9 was commanded during a modal in which diameter/radius designation selection is not available.

Remedy
• Check the program.

P706 Invlid cmd in dia/rad selection

Details
A G code impossible to command was issued during switching between diameter and radius using the diameter/radius designation selection.

Remedy
• Check the program.

P721 No selected point for return

Details
G26 (Return to selected point) has been given in a program other than a machining interruption program.

Remedy
• Correct the program.

P727 Selected point error

Details
The command order of the selected point is incorrect.

Remedy
• Correct the program.

P728 Invalid cmd in mach interrupt

Details
The executed command is unavailable in a machining interruption program.

Remedy
• Correct the program.

P729 Invalid cmd before tap retract

Details
The command in the retraction program cannot be executed prior to the tap retraction command (G26).

Remedy
• Place the command after the tap retraction (G26) block.
P730  **Invalid end pt for tap retract**

**Details**
The position (end point) given to the drill axis in the tap retraction command (G26) is lower than the R-point (closer to the hole bottom).

**Remedy**
- Correct the coordinates of the drill axis command.

P801  **Turning tool offset disabled**

**Details**
Any of the following commands has been given during the G43.7 mode.
- Mirror image by G code
- Mirror image by parameter setting
- Mirror image by external input
- Tool length compensation along the tool axis
- Automatic tool length measurement

A G43.7 command has been given in any of the following modes.
- Mirror image by G code
- Mirror image by parameter setting
- Mirror image by external input
- Fixed cycle for drilling

**Remedy**
- Check the program. If you use the mirror image, tool length compensation along the tool axis, automatic tool length measurement or fixed cycle for drilling, use a G49 command to cancel the tool position offset.

P802  **Nose R compensation disabled**

**Details**
Any of the following commands has been given during nose R compensation for machining center system.
- Mirror image by G code
- Mirror image by parameter setting
- Mirror image by external input

Nose R compensation for machining center system has been executed in any of the following modes.
- Mirror image by G code
- Mirror image by parameter setting
- Mirror image by external input

**Remedy**
- Check the program. If you use the mirror image, use a G40 command to cancel the nose R compensation for machining center system.

P803  **Proceed of prog check disabled**

**Details**
The commanded G code has disabled the program check.

**Remedy**
Delete the G code that disables the program check, and then retry the program check.
(Note that deleting the G code may affect the operation of the subsequent blocks.)

P900  **No spec: Normal line control**

**Details**
A normal line control command (G40.1, G41.1, or G42.1) was issued though it is out of specifications.

**Remedy**
- Check the specifications.

P901  **Normal line control axis G92**

**Details**
A coordinate system preset command (G92) was issued to a normal line control axis during normal line control.

**Remedy**
- Correct the program.
<table>

12 Program Errors (P)

**P930 No spec: Tool axis compen**

**Details**
A tool length compensation along the tool axis command was issued though it is out of specifications.

**Remedy**
- Check the specifications.

**P931 Executing tool axis compen**

**Details**
There is a G code that cannot be commanded during tool length compensation along the tool axis.

**Remedy**
- Correct the program.

**P932 Rot axis parameter error**

**Details**
There is an illegal orthogonal axis name or rotary axis name set in the rotary axis configuration parameters.
There is an illegal setting in the parameter concerning the configuration of the inclined surface machining axis.

**Remedy**
- Set the correct value and turn the power ON again.

**P934 5-axis control config. error**

**Details**
- The function cannot be executed under the axis configuration of the part system.
- The rotary axis is in the spindle mode of the spindle position control.

**Remedy**
- Correct the program.
- Check and correct the rotary axis configuration parameters so that the function can be executed in the axis configuration.

**P940 No spec: Tool tip control**

**Details**
There is no specification for tool tip center control.

**Remedy**
- Check the specifications.

**P941 Invalid T tip control command**

**Details**
A tool tip center control command was issued during a modal for which a tool tip center control command cannot be issued.

**Remedy**
- Correct the program.

**P942 Invalid cmd during T tip ctrl**

**Details**
A G code that cannot be commanded was issued during tool tip center control.

**Remedy**
- Correct the program.

**P943 Tool posture command illegal**

**Details**
In tool tip center control type 1, if the signs at the tool-side rotary axis or table base-side rotary axis start and finish points differ, a tool base-side rotary axis or table workpiece-side rotary axis rotation exists for the same block, and does not pass a singular point.
In tool tip center control type 2, the posture vector command is incorrect.

**Remedy**
- Correct the program.

13 Smart Safety Observation Alarm (V)

Details
The data received by the safety I/O unit is incorrect. The screen displays the unit No. and RIO system with an error.
bit24-27: Unit No.
bit16-17: Detected system
Safety observation target axes are stopped, and all the DOs of the safety I/O unit concerned are turned OFF.

Remedy
• NC unit or safety I/O unit may be faulty. Exchange the NC unit or safety I/O unit.

Details
The data received by the safety I/O unit is inconsistent. The screen displays the unit No. and RIO system with an error.
bit24-27: Unit No.
bit16-17: Detected system
Safety observation target axes are stopped, and all the DOs of the safety I/O unit concerned are turned OFF.

Remedy
• Check the user safety sequence circuit to see if the output signal control circuit is correct.
• Data corruption may have been caused due to noise. Take anti-noise measures on the connection between the NC unit and safety I/O unit.
• NC unit or safety I/O unit may be faulty. Exchange the NC unit or safety I/O unit.

Details
Output signal of the safety I/O unit fails to be OFF. The screen displays the unit No., RIO system and signal bit with an error.
bit0-31: Signal BIT
Safety observation target axes are stopped.

Remedy
• NC unit or safety I/O unit may be faulty. Exchange the NC unit or safety I/O unit.

Details
Loop-back signals of the outputs from the safety I/O unit are inconsistent between PLC1 and PLC2. The screen displays the unit No., RIO system and signal bit with an error.
bit0-31: Signal BIT
Safety observation target axes are stopped.

Remedy
• Check the user safety sequence circuit to see if the output signal control circuit is correct.
• NC unit or safety I/O unit may be faulty. Exchange the NC unit or safety I/O unit.
Details
Output signals are inconsistent between the user safety sequence and safety I/O unit. The screen displays the unit No., RIO system and signal bit with an error.

bit0-31: Signal BIT
Safety observation target axes are stopped.

Remedy
• Check the user safety sequence circuit to see if the output signal control circuit is correct.
• NC unit or safety I/O unit may be faulty. Exchange the NC unit or safety I/O unit.

Details
input signals from the safety I/O unit are inconsistent between PLC1 and PLC2. The screen displays the unit No., RIO system and signal bit with an error.

bit0-31: Signal BIT
Safety observation target axes are stopped.

Remedy
• Any input device (emergency stop button, for example) connected to the safety I/O unit may be faulty. Check the input devices.
• NC unit or safety I/O unit may be faulty. Exchange the NC unit or safety I/O unit.

Details
The data received from the safety I/O unit is incorrect. The screen displays the unit No. and RIO system with an error.

bit24-27: Unit No.
bit16-17: Detected system
Safety observation target axes are stopped.

Remedy
• Data corruption may have been caused due to noise. Take anti-noise measures on the connection between the NC unit and safety I/O unit.
• NC unit or safety I/O unit may be faulty. Exchange the NC unit or safety I/O unit.

Details
The data received from the safety I/O unit is incorrect. The screen displays the unit No. and RIO system with an error.

bit24-27: Unit No.
bit16-17: Detected system
Safety observation target axes are stopped.

Remedy
• NC unit or safety I/O unit may be faulty. Exchange the NC unit or safety I/O unit.

Details
The data received from the safety I/O unit is incorrect. The screen displays the unit No. and RIO system with an error.

bit24-27: Unit No.
bit16-17: Detected system
Safety observation target axes are stopped.

Remedy
• The cable connecting between the NC unit and safety I/O unit may be disconnected or loosened. Check the cable.
• NC unit or safety I/O unit may be faulty. Exchange the NC unit or safety I/O unit.
The input signals from the drive’s safety function are inconsistent. The screen displays the No. of device ZR with an error. Safety observation target axes are stopped.

Remedy
• NC unit may be faulty. Exchange the NC unit.

An error has occurred in User safety sequence 1. The screen displays the error cause by the number. Safety observation target axes are stopped. User safety sequences 1 and 2 are both stopped. All the DOs of the connected safety I/O unit are turned OFF.

Remedy
• Refer to the list of user safety sequence error details in Smart safety observation Specification manual. Cancel the error based on the displayed error cause, and then turn OFF and ON the NC power.

An error has occurred in User safety sequence 2. The screen displays the error cause. Safety observation target axes are stopped. User safety sequences 1 and 2 are both stopped. All the DOs of the connected safety I/O unit are turned OFF.

Remedy
• Refer to the list of user safety sequence error details in Smart safety observation Specification manual. Cancel the error based on the displayed error cause, and then turn OFF and ON the NC power.

The signals output to the safety I/O unit are unmatched between PLC1 and PLC2. The screen shows the unit No., RIO system and signal bit in error.

bit0-31: Signal BIT
The axes covered by safety function come to a standstill.

Remedy
• Check the user safety sequence to make sure the output signal control circuit is correct.
• Set tolerable time more than 300ms, when an output signal is controlled with 100ms timer.
• NC unit may be faulty. Replace the NC unit.

The system has both an axis for which Safety observation is enabled (the parameter "#2313 SV113(SSF8)/bitF" or "#13229 SP229(SFNC9)/bitF" is "1") and an axis for which Smart safety observation is enabled (the parameter "#51101 SF_Disable" or "#51301 SF_SDisable" is "0").

Remedy
• Disable Safety observation for all the axes (Set the parameters "#2313 SV113(SSF8)/bitF" and "#13229 SP229(SFNC9)/bitF" to "0"), and turn ON the NC reset signal.
• Disable Smart safety observation for all the axes (Set the parameters "#51101 SF_Disable" and "#51301 SF_SDisable" to "1"), and turn the power OFF and ON.
13 Smart Safety Observation Alarm (V)

**Details**

A safety I/O unit has been connected with the smart safety observation option OFF or with the parameters "#51101 SF_Disable" and "#51301 SF_SDisable" set to "1" for all the axes. The screen displays the channel to which the safety I/O unit is connected by the bit number.

- bit0: Operation panel
- bit1: RIO 1CH
- bit2: RIO 2CH
- bit3: RIO 3CH

**Remedy**

- Disconnect the safety I/O unit, and then turn OFF and ON the power.
- If you wish to use Smart safety observation, implement the following and then turn the power OFF and ON.
  - Enable the option.
  - Turn "0" the axis parameter of Smart safety observation ("#51101 SF_Disable" / "#51301 SF_SDisable").

**Details**

A safety I/O unit has been connected to the I/O connection channel where RIO1.0 unit is connected. The screen displays the I/O connection channel to which the safety I/O unit is connected using a bit number.

- bit0: Operation panel
- bit1: RIO 1CH
- bit2: RIO 2CH
- bit3: RIO 3CH

**Remedy**

- For the I/O connection channel where the safety signal input/output is conducted, no devices other than RIO2.0 unit or safety I/O unit can be connected.
- If you are unable to change the I/O device configuration immediately, set the parameters "#51101 SF_Disable" and "#51301 SF_SDisable" to "1" for all the axes, and turn OFF and ON the power. This prevents occurrence of this alarm.

**Details**

None of the I/O connection channels is connected to a safety I/O unit.

**Remedy**

- Connect a safety I/O unit to the I/O connection channel through which the safety signals are input/output.
- If you are unable to change the I/O device configuration immediately, set the parameters "#51101 SF_Disable" and "#51301 SF_SDisable" to "1" for all the axes, and then turn OFF and ON the power. This prevents occurrence of this alarm.

**Details**

Safety PLC has not been written.

**Remedy**

- Write safety PLC and turn the power OFF and ON.
- If safety PLC is not ready, set the parameters "#51101 SF_Disable" and "#51301 SF_SDisable" to "1" for all the axes, and then turn the power OFF and ON. This prevents occurrence of this alarm.
13 Smart Safety Observation Alarm (V)

**Details**

The optical channel connected to an axis for which the parameter 
"#51101 SF_Disable" or "#51301 SF_SDisable" is set to "0" is configured with any drive unit other than MDS-E Series. (MDS-D Series drive unit is connected to the said channel.)

The screen displays the No. of optical communication channel of this error.

**Remedy**

- Do not connect any drive unit other than MDS-E Series to the optical channel of the axis for which the parameter 
  "#51101 SF_Disable" or "#51301 SF_SDisable" is set to "0".
- If an MDS-E Series drive unit is not ready, set the parameters 
  "#51101 SF_Disable" / "#51301 SF_SDisable" to "1" for all the axes of the said channel, and then turn OFF and ON the power.

This prevents occurrence of this alarm.

**Details**

The channel No. or station No. of the emergency stop signal device (set by parameters) does not coincide with any contact point (channel/station No. specified by the safety I/O assignment parameters RIO CH No and RIO Station No.) of the safety I/O unit. The screen displays the index No. of the incorrectly set emergency stop signal device.

0001: EMG_Dev1_ch to EMG_Dev1_bit
0002: EMG_Dev2_ch to EMG_Dev2_bit

**Remedy**

- Change the channel, station or bit No. of emergency stop signal device to be one of the contact points of the safety I/O unit. And then turn OFF and ON the power.
- When you change the setting of emergency stop signal device channel No. (EMG_Dev1_ch / EMG_Dev2_ch) to 0, and turn OFF and ON the power, the designation of emergency stop signal device is disabled, so this alarm is cleared.

**Details**

Safety I/O device assignment parameter is incorrect.

- The safety I/O device assignment parameter of the connected safety I/O unit is not set.
- The safety I/O device assignment parameter is set for any disconnected safety I/O unit.
- The set channel No. or station No. is overlapped.

**Remedy**

- Make sure which safety I/O unit is connected, set the safety I/O device assignment parameters, and then turn OFF and ON the power.

**Details**

There is a discrepancy between the PLC side parameter (I/O allocation setting) and CNC side parameter (safety I/O allocation).

- The setting of "Top XY" on the PLC side is different from "DI(DO) dev No." on the CNC side.
- The number of registered safety signal units is different between PLC and CNC sides.

**Remedy**

Correct the parameters to be consistent between PLC and CNC. After that turn OFF and ON the CNC power.
### V05 SLS speed error

**Details**
During SLS observation, the command/FB speed has exceeded the safely-limited speed(*) and has not dropped below the speed limit within the SLS detection delay time (set by parameter).
The screen displays the name of axis of this error.

(*) Safely-limited speed = SLS speed tolerance x SLS speed override / 100

**Remedy**
- This error can be cancelled by the safety reset signal while motor speed is under SLS limit.
- If the SLS speed tolerance or SLS speed override (set by parameter) is lower than the assumption, change the parameter setting and turn OFF and ON the power.
- If the SLS detection delay time (set by parameter) is shorter than the assumption, change the parameter setting.
- Check the safety ladder to make sure that SLS speed tolerance and SLS speed override are changed in a timely manner.

<table>

### V05 SLS deceleration error

**Details**
The command/FB speed has failed to decelerate to the safely-limited speed(*) or lower within a period of SLS deceleration observation time (set by parameter) after start of SLS observation.
The screen displays the name of axis of this error.

(*) Safely-limited speed = SLS speed tolerance x SLS speed override / 100

**Remedy**
- This error can be cancelled by the safety reset signal while motor speed is under SLS limit.
- If the SLS speed tolerance or SLS speed override (set by parameter) is lower than the assumption, change the parameter setting and turn OFF and ON the power.
- If the SLS deceleration observation time (set by parameter) is shorter than the assumption, change the parameter setting.

</table>

### V05 SLP position error

**Details**
The command position/FB position has gone out of the SLP position tolerance range (set by parameter) during the SLP observation, and failed to return to the tolerance range within the SLP detection delay time (set by parameter).
The screen displays the name of axis of this error.

**Remedy**
- This error can be cancelled by the safety reset signal while the axis is in the SLP position range.
- If the axis is out of the SLP position range, deactivate SLP observation, cancel this error using the safety reset signal, and then move the axis to a safe position in a manual mode.
- If the safely-limited position range (specified by the SLP position tolerance parameters) is smaller than the assumption, change the parameter settings and turn OFF and ON the power.
- If the SLP detection delay time (set by parameter) is shorter than the assumption, change the parameter setting.
- Check the safety ladder to make sure that SLP position tolerance is changed in a timely manner.

### V05 SOS speed error

**Details**
The command/FB speed, which had exceeded the SOS stop speed (set by parameter) during SOS, has failed to drop to the SOS stop speed or lower within the SOS_V detection delay time (set by parameter).
The screen displays the name of axis of this error.

*If the conditions of two or more SOS-related alarms are met at a time, the notification priority order is as follows: SOS position deviation error > SOS travel distance error > SOS speed error.*

**Remedy**
- This error can be cancelled by the safety reset signal while In SOS stop is ON.
- If In SOS stop is OFF, deactivate SOS, cancel this error using the safety reset signal, and then move the axis to a safe position in a manual mode.
- If the parameter of SOS stop speed is lower than the assumption, change the setting and turn OFF and ON the power.
- If the SOS_V detection delay time (set by parameter) is shorter than the assumption, change the parameter setting.

</tr>
</tbody>
</table>
Details
The position deviation (difference between the command and FB positions), which had exceeded the SOS position deviation tolerance (set by parameter) during SOS, has failed to reduce to the SOS position deviation tolerance or smaller within the SOS_PD detection delay time (set by parameter). The screen displays the name of axis of this error.

*If the conditions of two or more SOS-related alarms are met at a time, the notification priority order is as follows: SOS position deviation error > SOS travel distance error > SOS speed error.

Remedy
• Refer to the corrective actions of "SOS speed error" for how to cancel this error.
• If the SOS position deviation tolerance (set by parameter) is smaller than the assumption, change the setting and turn OFF and ON the power.
• If the SOS_PD detection delay time (set by parameter) is shorter than the assumption, change the parameter setting.

Details
The command/FB travel distance, which had exceeded the SOS travel distance tolerance (+/-) (set by parameter) during SOS, has failed to reduce to the SOS travel distance tolerance (+/-) or smaller within the SOS_PD detection delay time (set by parameter). The screen displays the name of axis of this error.

*If the conditions of two or more SOS-related alarms are met at a time, the notification priority order is as follows: SOS position deviation error > SOS travel distance error > SOS speed error.

Remedy
• Refer to the corrective actions of "SOS speed error" for how to cancel this error.
• If the SOS travel distance tolerance (+/-) (set by parameter) is smaller than the assumption, change the setting and turn OFF and ON the power.
• If the SOS_PD detection delay time (set by parameter) is shorter than the assumption, change the parameter setting.

Details
The SS1 deceleration observation time (set by parameter) has elapsed with the command/FB speed exceeding the SOS stop speed (set by parameter) since the start of SS1. The screen displays the name of axis of this error.

Remedy
• This error can be cancelled by the safety reset signal while In SS1 stop is ON.
• If the SS1 deceleration observation time (set by parameter) is shorter than the assumption, change the parameter setting.

Details
The command/FB speed has been exceeding the SOS stop speed (set by parameter) for a period of SS2 deceleration observation time (set by parameter) since the start of SS2. The screen displays the name of axis of this error.

Remedy
• Deactivate SS2, cancel this error using the safety reset signal, and then move the axis to a safe position in a manual mode.
• If the SS2 deceleration observation time (set by parameter) is shorter than the assumption, change the parameter setting.

Details
Emergency stop signal is OFF (open status), although Safety external emergency stop is enabled.

Remedy
• Ensure the safety of the machine, and then turn the emergency stop signal ON (close status).
13 Smart Safety Observation Alarm (V)

<table>
<thead>
<tr>
<th>V07</th>
<th>DRV safe circuit error</th>
<th>Error No.</th>
<th>Axis name</th>
</tr>
</thead>
</table>

**Details**

The drive unit's internal safety circuit has caused abnormal operation.
The error number corresponding to the contents of abnormal operation appears.

**Remedy**

- Drive unit may be damaged. Replace the drive unit.
13.2 Smart Safety Observation Warning (V50/V51/V52/V53/V54)

<table>
<thead>
<tr>
<th>V50</th>
<th>SSM hysteresis setting error</th>
<th>0001</th>
<th>Axis name</th>
</tr>
</thead>

| Details | When turning ON the SBT start signal (SBTSTEXm / SBTSTMOm), the test start condition are not met. Displays the factor why the brake test start is impossible 
* When there are multiple factors, the smaller item is shown. 
0001: part systems in automatic operation 
0002: not in in-position 
0003: in servo OFF state. 
0004: in current limit 
0005: the secondary axis in the synchronous control 
0006: in superimposition control 
0007: in arbitrary axis exchange control 
0008: in mixed control 
0009: Parameter for SBT error 
000A: reference position establishment incomplete 
000B: applies exclusive control of SBT 
000C: the secondary axis SBT disabled 
000D: the secondary axis SBT start disabled 
000E: the secondary axis in single method |
| Remedy | • Check the start-enabled condition of the brake test. Eliminate the cause of the alarm, then enable the SBT start signal to start the brake test. |

Details
• Smart safety observation target axis (the parameters "#51101 SF_Disable" = 0 / "#51301 SF_SDisable" = 0) is defined as a hypothetical axis (the parameter "#51015 safe_drv_test" = 1). In this case some alarms fail to occur, thus avoid this setting while a drive unit is being connected.
• NC system is set to a simulation mode (the parameter "#1168 test" = 1). During this mode some alarms fail to occur, thus do not use this mode while a safety I/O unit is connected.

Remedy
• Connect MDS-E Series drive to all the axes subject to safety observation, set the parameter ("#51015 safe_drv_test" = 0) and then turn OFF and ON the power.
• Connect a safety I/O unit, set the parameter ("#1168 test" = 0) and then turn OFF and ON the power.

</tbody>
</table>

*1: The system memory includes system registers like P0, P1, P2, etc.
Details
• The response send failed during socket communications.

Remedy
• Check the operation of the external device or switching hub.
• Since there may be congestion of packets on the line, send data after a certain period of time.
• Check if the connection cable is disconnected.
• Check that there is no connection failure with the switching hub.

A01  TCP connection timeout  1134

Details
• A TCP ULP timeout error has occurred in the TCP/IP communication. (The external device does not send an ACK response.)

Remedy
• Check the operation of the external device.
• Correct the TCP ULP timeout value.
• Since there may be congestion of packets on the line, send data after a certain period of time.
• Check if the connection cable is disconnected.

A01  IP address error  1152

Details
• The IP address is not set correctly.

Remedy
• Correct the IP addresses.

A01  Connection number acquisition error  1155

Details
• The specified connection was already closed in TCP/IP communications.
• Open processing is not performed.

Remedy
• Perform the open processing for the specified connection.
• Check if the open processing has been performed in the external device.

A01  Receive buffer securement error  1157

Details
• The specified connection was already closed in UDP/IP communications.
• Open processing is not performed.

Remedy
• Perform the open processing for the specified connection.
• Check if the open processing has been performed in the external device.

A01  UDP/IP send failed  1165

Details
• Data was not sent correctly with UDP/IP.

Remedy
• Check the settings for connection with the external device.
• Check the operation of the external device or switching hub.
• Since there may be congestion of packets on the line, send data after a certain period of time.
• Check if the connection cable is disconnected.
• Check that there is no connection failure with the switching hub.
• Execute the PING test, and if the test was completed with an error, take the corrective action.
### A01 TCP/IP send failed 1166

#### Details
- Data was not sent correctly with TCP/IP.

#### Remedy
- Check the settings for connection with the external device.
- Check the operation of the external device or switching hub.
- Since there may be congestion of packets on the line, send data after a certain period of time.
- Check if the connection cable is disconnected.
- Check that there is no connection failure with the switching hub.
- Execute the PING test, and if the test was completed with an error, take the corrective action.

### A01 Unsent data send error 1167

#### Details
- Unsent data found, but could not be sent.

#### Remedy
- Check the settings for connection with the external device.
- Check the operation of the external device or switching hub.
- Since there may be congestion of packets on the line, send data after a certain period of time.
- Check if the connection cable is disconnected.
- Check that there is no connection failure with the switching hub.
- Execute the PING test, and if the test was completed with an error, take the corrective action.

### A01 Module moderate error 1200

#### Details
- A moderate error has been notified from the intelligent function module connected.

#### Remedy
- Check the detailed information (system configuration information) of the error by executing module diagnostics using the engineering tool, identify the error module, and eliminate the error cause.

### A01 Module moderate error 1210

#### Details
- An inter-module synchronous signal error has been notified from the intelligent function module connected.

#### Remedy
- Check the detailed information (system configuration information) of the error by executing module diagnostics using the engineering tool, identify the error module, and eliminate the error cause.

### A01 Another CPU module moderate error 1220

#### Details
- A moderate error has been notified from another CPU module.

#### Remedy
- Check the detailed information (system configuration information) of the error by executing module diagnostics using the engineering tool, identify the error module, and eliminate the error cause.
- Check the mounting status and reset status of other CPU modules.

### A01 Multiple CPU synchronization processing error 1260

#### Details
- The execution interval of a synchronous interrupt program has exceeded the set value.
- The run of a multiple CPU synchronous interrupt program (I45) has not finished within the multiple CPU fixed scan communication period.

#### Remedy
- Check the detailed information (time information) in the module diagnostics to verify its value (time), and take the following actions:
  1. Review the processing details on the multiple CPU synchronous interrupt program so that its processing is to be completed within the period specified in the fixed scan interval setting.
  2. Set the period specified in the fixed scan interval setting to an appropriate value.
### 14 Multi CPU Errors (A)

#### A01 Multiple CPU synchronization processing error

**Details**
- The program run section of a synchronous interrupt program has been exceeded.
- The multiple CPU synchronous interrupt program (I45) has not been completed within the program run section.

**Remedy**
- Check the detailed information (time information) in the module diagnostics to verify its value (time), and take the following actions:
  1. Review the processing details on the multiple CPU synchronous interrupt program so that its processing is to be completed within the period specified in the fixed scan interval setting.
  2. Set the period specified in the fixed scan interval setting to an appropriate value.

#### A01 Receive queue full

**Details**
- Number of reception requests of transient transmission exceeded upper limit of simultaneously processable requests.

**Remedy**
- Lower the transient transmission usage frequency, and then perform again.

#### A01 Receive processing error

**Details**
- Transient reception failed.

**Remedy**
- Lower the transient transmission usage frequency, and then perform again.

#### A01 Transient data error

**Details**
- Too many processings of transient transmission and cannot perform transient transmission.

**Remedy**
- Correct the transient transmission execution count.

#### A01 Constant scan time error

**Details**
- The scan time exceeded the constant scan time set in the CPU parameters.

**Remedy**
- Check and correct the constant scan time setting.

#### A01 Safety master station error

**Details**
- Error information has been received from the master station in safety communication (CC-Link IE Field).

**Remedy**
- Execute the system monitor using the engineering tool to check the details of the error on the master station.

#### A01 Safety master param. Mismatch

**Details**
- The parameters written to the NC and to the master station do not match.

**Remedy**
- Make sure that the safety communication settings defined for the master station are consistent with the following parameters set in the NC: "#51702 SCN_Network No." (Safety communication network No.) and "#51703 SCN_Station No." (Safety communication network station No.).
- If the same error code is displayed again, the possible cause is a hardware failure of the data memory in the CPU module or the module performing the safety communication (CC-Link IE Field). Contact the service center.
A01  Timeout in safety comm.  1A60

Details
• A timeout error occurred for the response to the request when the safety communication connection was being established.

Remedy
• The possible cause is malfunction due to noise or cable failure. Check that there is no error in the transmission paths. Also check the distance of wires and cables and the grounding status of each device.
• Check the safety refresh monitoring time set for the master station. (*)
• Check that no online operation is being performed from a peripheral such as the engineering tool, or no program or parameter is being written to the master station.
• The possible cause is a hardware failure of the module performing the safety communication (CC-Link IE Field). Contact the service center.

(*) For details, refer to “MELSEC iQ-R CC-Link IE Field Network User's Manual (Application)".

A01  Timeout in safety comm.  1A61

Details
• A timeout error occurred during the safety refresh in safety communication (CC-Link IE Field).

Remedy
• The possible cause is malfunction due to noise or cable failure. Check that there is no error in the transmission paths. Also check the distance of wires and cables and the grounding status of each device.
• Check the safety refresh monitoring time set for the master station. (*)
• Check that no online operation is being performed from a peripheral such as the engineering tool, or no program or parameter is being written to the master station.
• The possible cause is a hardware failure of the module performing the safety communication (CC-Link IE Field). Contact the service center.

(*) For details, refer to “MELSEC iQ-R CC-Link IE Field Network User's Manual (Application)".

A01  Timeout in safety comm.  1A62

Details
• A timeout error occurred during handling of an error in safety communication (CC-Link IE Field).

Remedy
• The possible cause is malfunction due to noise or cable failure. Check that there is no error in the transmission paths. Also check the distance of wires and cables and the grounding status of each device.
• Check the safety refresh monitoring time set for the master station. (*)
• Check that no online operation is being performed from a peripheral such as the engineering tool, or no program or parameter is being written to the master station.
• The possible cause is a hardware failure of the module performing the safety communication (CC-Link IE Field). Contact the service center.

(*) For details, refer to “MELSEC iQ-R CC-Link IE Field Network User's Manual (Application)".

A01  Timeout in safety comm.  1A63

Details
• A timeout error occurred for the safety refresh monitoring time in safety communication (CC-Link IE Field).

Remedy
• The possible cause is malfunction due to noise or cable failure. Check that there is no error in the transmission paths. Also check the distance of wires and cables and the grounding status of each device.
• Check the safety refresh monitoring time set for the master station. (*)
• Check that no online operation is being performed from a peripheral such as the engineering tool, or no program or parameter is being written to the master station.
• The possible cause is a hardware failure of the module performing the safety communication (CC-Link IE Field). Contact the service center.

(*) For details, refer to “MELSEC iQ-R CC-Link IE Field Network User's Manual (Application)".
Details
• The length of time that elapsed after the last data reception has exceeded the permissible value in safety communication (CC-Link IE Field).

Remedy
• The possible cause is malfunction due to noise or cable failure. Check that there is no error in the transmission paths. Also check the distance of wires and cables and the grounding status of each device.
• Check the transmission interval monitoring time set for the master station. (*)
• Check that no online operation is being performed from a peripheral such as the engineering tool, or no program or parameter is being written to the master station.
• The possible cause is a hardware failure of the module performing the safety communication (CC-Link IE Field). Contact the service center.

(*) For details, refer to "MELSEC iQ-R CC-Link IE Field Network User's Manual (Application)".

Details
• An error was detected in reception packets of safety communication.

Remedy
• The possible cause is a hardware failure of the module performing the safety communication (CC-Link IE Field). Contact the service center.

Details
• An error was detected in the user data of received packets of safety communication.

Remedy
• The possible cause is a hardware failure of the module performing the safety communication (CC-Link IE Field). Contact the service center.

Details
• An error was detected in the time stamp of received data of safety communication.

Remedy
• The possible cause is a hardware failure of the module performing the safety communication (CC-Link IE Field). Contact the service center.

Details
• An error was detected in the network number or the station number of received packets in safety communication.

Remedy
• The possible cause is a hardware failure of the module performing the safety communication (CC-Link IE Field). Contact the service center.
### A01 Module configuration error 2000

**Details**
- The module type set in the system parameters ("I/O Assignment Setting") differs from that of the module actually mounted.

**Remedy**
- Re-set the module type in the system parameters in accordance with the CPU module or intelligent function module actually mounted.

### A01 Module configuration error 2001

**Details**
- The I/O numbers set in the system parameters ("I/O Assignment Setting") are overlapping between modules.

**Remedy**
- Re-set the I/O numbers in the system parameters in accordance with the intelligent function module or I/O module actually mounted.

### A01 Module configuration error 2002

**Details**
- The number of points assigned to the intelligent function module in the system parameters ("I/O Assignment Setting") is smaller than that of the module actually mounted.

**Remedy**
- Re-set the number of points in the system parameters in accordance with the intelligent function module actually mounted.

### A01 Module configuration error 2004

**Details**
- Nine or more CC-Link IE Controller Network modules* are mounted in the entire system.
- The CC-Link IE built-in Ethernet interface module is included if the module is used as a CC-Link IE Controller Network module.

**Remedy**
- Reduce the number of CC-Link IE Controller Network modules* to eight or less in the entire system.
- The CC-Link IE built-in Ethernet interface module is included if the module is used as a CC-Link IE Controller Network module.

### A01 Module configuration error 2005

**Details**
- Two or more interrupt modules (QI60) with no interrupt pointer setting are mounted.
- The interrupt pointer numbers are overlapping in the interrupt module (QI60) with no interrupt pointer setting and a module with an interrupt pointer setting.

**Remedy**
- Mount only one QI60 in the entire system.
- Configure the interrupt pointer setting for the QI60.
- Correct the interrupt pointer setting.

### A01 Module configuration error 2006

**Details**
- A module is mounted on the 65th slot or later.

**Remedy**
- Remove the module mounted on the 65th slot or later.

### A01 Module configuration error 2007

**Details**
- A module is mounted on the slot whose number is later than that specified in the system parameters ("I/O Assignment Setting").

**Remedy**
- Remove the module mounted on the slot whose number is later than that specified in the system parameters.
A01  Module configuration error  2008

Details
• A module is mounted over or across the maximum number of I/O points (4096).

Remedy
• Remove the module mounted over or across the maximum number of I/O points (4096).
• Replace the module mounted on the last slot to the one that does not exceed the maximum number of I/O points (4096).

A01  Module configuration error  2009

Details
• There is no response from the I/O module or intelligent function module accessed.

Remedy
• Check and correct the I/O assignment setting in the system parameters.
• The possible cause is a hardware failure of the I/O module or intelligent function module accessed. Please consult your local Mitsubishi representative.

A01  CPU module configuration error  2020

Details
• There is a mounted module that is not supported, or there is a mounted module that is not supported by the network type (module model name) set in system parameters ("I/O Assignment Setting").

Remedy
• Remove the unsupported module if any.
• Check whether modules are supported by the network type (module model name) set in the system parameters.
• If all the modules are supported, the possible cause is a hardware failure of the CPU module, base unit, I/O module, or intelligent function module. Please consult your local Mitsubishi representative.

A01  CPU module configuration error  2021

Details
• In the multiple CPU system, the control CPU of the Q series intelligent function module incompatible with the multiple CPU system is set to other than CPU No.1.

Remedy
• Replace the Q series intelligent function module with the one (function version B) compatible with the multiple CPU system.
• Set the control CPU of the Q series intelligent function module incompatible with the multiple CPU system to CPU No.1.

A01  CPU module configuration error  2040

Details
• The number of CPU modules set in the system parameters ("I/O Assignment Setting") differs from the number of CPU modules actually mounted.
• The CPU module is mounted on the slot different from the one specified in the system parameters (I/O assignment setting).

Remedy
• Correctly set the number of CPU modules (including the empty setting) in the system parameters in accordance with the number of CPU modules actually mounted.
• Correctly set the system parameters so that the setting and actual CPU module mounting status will be the same.
A01  CPU module configuration error  2041

Details
• The CPU module is not mounted on the slot that is set for the CPU module in the system parameters ("I/ O Assignment Setting").
• The CPU module is mounted on the slot that is set for empty in the system parameters ("I/O Assignment Setting").
• An I/O module or intelligent function module is mounted between the CPU modules.

Remedy
• Correctly set the number of CPU modules (including the empty setting) in the system parameters in accordance with the number of CPU modules actually mounted.
• Remove the I/O module or intelligent function module mounted between the CPU modules.

A01  CPU module configuration error  2043

Details
• The CPU module is mounted on the inapplicable slot.

Remedy
• Mount the CPU module on the applicable slot (CPU slot or I/O slot 0 to 6).
• Remove the CPU module from the inapplicable slot.

A01  CPU module configuration error  2044

Details
• The host CPU No. set in the system parameters ("I/O Assignment Setting") differs from the one determined by the mounting position of the CPU module.

Remedy
• Re-set the host CPU No. in the system parameters in accordance with the mounting position of the CPU module.

A01  CPU module configuration error  2050

Details
• An unsupported CPU module is mounted.

Remedy
• Remove the unsupported CPU module. If all the CPU modules are supported, the possible cause is a hardware failure of the CPU module or base unit. Please consult your local Mitsubishi representative.

A01  Base unit A configuration error  2060

Details
• Eight or more extension base units are connected.

Remedy
• Reduce the number of extension base units to seven or less.

A01  Base unit A configuration error  2061

Details
• Any of the following base units is connected: QA1S3 B, QA1S5 B/QA1S6 B, QA6 B, QA6ADP+A5 B/A6 B, or QA1S6ADP+A1S5 B/A1S6 B.

Remedy
• Remove the inapplicable base unit: QA1S3 B,QA1S5 B/QA1S6 B, QA6 B, QA6ADP+A5 B/A6 B B, and QA1S6ADP+A1S5 B/A1S6 B.

A01  Base unit A configuration error  2063

Details
• Extension base unit levels are overlapping.

Remedy
• Check and correct the level setting of the extension base units.
C80 Series Alarm/Parameter Manual

<tr>
<td>A01</td>
<td>Invalid file</td>
<td>An invalid file has been detected.</td>
<td>Check the detailed information (drive/file information) of the error by executing module diagnostics using the engineering tool, select the correct file name, and write the specified file to the CPU module. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.</td>
</tr>
</tbody>
</table>
| A01        | File specification error                        | The file specified in parameter cannot be created.                      | Check the detailed information (parameter information) of the error by executing module diagnostics using the engineering tool, and correct the name and size of the file corresponding to the displayed number. Check the detailed information (drive/file information) of the error by executing module diagnostics using the engineering tool, and take either of the following action.
   (1) Format the corresponding drive.
   (2) Delete unnecessary files on the corresponding drive to increase free space.
   (3) Unlock the corresponding drive if it is locked. |
Details
• The CPU module model set to the file using the engineering tool differs from that of the CPU module actually mounted.

Remedy
• Check the detailed information (drive/file information) of the error by executing module diagnostics using the engineering tool, and correct the CPU module model set to the file in accordance with that of the CPU module actually mounted.

Details
• The system parameter file and CPU parameter file do not exist.

Remedy
• Write the system parameter file and CPU parameter file to the CPU module.
• Turn off SM606. (Cancel the disabled state.)

Details
• An error was detected in the consistency check of the safety connection parameters.

Remedy
• Check the following parameters set in the NC: “#51702 SCN_Network No.” (Safety communication network No.) and “#51703 SCN_Station No.” (Safety communication network station No.). When necessary, modify the setting and restart the NC.
• If the same error code is displayed again, the possible cause is a hardware failure of the data memory in the CPU module, the memory card, the I/O module or the CC-Link IE Field network module. Contact the service center.

Details
• The set value is out of range.

Remedy
• Check the following parameters set in the NC: “#51702 SCN_Network No.” (Safety communication network No.) and “#51703 SCN_Station No.” (Safety communication network station No.). When necessary, modify the setting and restart the NC.
• If the same error code is displayed again, the possible cause is a hardware failure of the data memory in the CPU module, the memory card, the I/O module or the CC-Link IE Field network module. Contact the service center.

Details
• Use of the function that is not supported by the module is enabled in parameter.

Remedy
• Check the detailed information (parameter information) of the error by executing module diagnostics using the engineering tool, and correct the parameter setting corresponding to the displayed number. If the same error code is displayed again, the possible cause is a hardware failure of the data memory in the CPU module, the memory card, or the module (I/O module or intelligent function module) connected. Please consult your local Mitsubishi representative.

Details
• A memory area cannot be ensured.

Remedy
• Check the detailed information (parameter information) of the error by executing module diagnostics using the engineering tool, display the error-detected area by clicking the [Error Jump] button, and increase the capacity of the area. (If the capacity of the area cannot be increased, decrease the capacity of other areas.)
• Reduce the number of labels or local devices used.
## A01 Parameter A error (module) 2225

**Details**
- The CPU module model set to the project using the engineering tool differs from that of the CPU module actually mounted.
- The operation set in the memory card parameters cannot be performed. (The boot function cannot be executed.)

**Remedy**
- Correct the CPU module model set to the project in accordance with the CPU module actually mounted.
- Delete the memory card parameter settings.
- Remove the memory card so that the operation set in the memory card parameters will not be performed. (Do not execute the boot operation.)

## A01 Parameter error (module) 2240

**Details**
- In the multiple CPU system, the I/O module or intelligent function module controlled by another CPU module is specified in the module parameters.

**Remedy**
- Check the detailed information (parameter information) of the error by executing module diagnostics using the engineering tool, and correct the parameter setting corresponding to the displayed number. If the same error code is displayed again, the possible cause is a hardware failure of the data memory in the CPU module or the module (I/O module or intelligent function module) connected. Please consult your local Mitsubishi representative.

## A01 Parameter error (module) 2241

**Details**
- The target module is not mounted on the slot specified by the parameter.

**Remedy**
- Check the following parameter set in the NC: "#51701 SCN_Slot No." (Safety communication network slot No.). When necessary, modify the setting and restart the NC.
- If the same error code is displayed again, the possible cause is a hardware failure of the data memory in the CPU module, the I/O module or the CC-Link IE Field network module. Contact the service center.

## A01 Parameter error (network) 2242

**Details**
- The CC-Link IE Field network module has detected a module parameter error.

**Remedy**
- Check the following parameters set in the NC: "#51702 SCN_Netwoork No." (Safety communication network No.) and "#51703 SCN_Station No." (Safety communication network station No.). When necessary, modify the setting and restart the NC.
- If the same error code is displayed again, the possible cause is a hardware failure of the data memory in the CPU module or the CC-Link IE Field network module. Contact the service center.

## A01 Parameter error (network) 2260

**Details**
- Network numbers are overlapping.

**Remedy**
- Check the detailed information (parameter information) of the error by executing module diagnostics using the engineering tool, and correct the parameter setting corresponding to the displayed number. If the same error code is displayed again, the possible cause is a hardware failure of the data memory in the CPU module or the intelligent function module connected. Please consult your local Mitsubishi representative.

</thead>
<tbody>
<tr>
<td>• Check the detailed information (parameter information) of the error by executing module diagnostics using the engineering tool, and correct the parameter setting corresponding to the displayed number.</td>
<td></td>
</tr>
</tbody>
</table>
Details

- The total number of refresh points exceeded the maximum limit.

Remedy

- Check the detailed information (parameter information) of the error by executing module diagnostics using the engineering tool, and correct the parameter setting corresponding to the displayed number.

Details

- In the multiple CPU system, the system parameter settings of the host CPU module differ from those of other CPU modules.
- In the multiple CPU system, the system parameter settings are overwritten only to the host CPU module, and the settings differ from those of other CPU modules.

Remedy

- Check the detailed information (parameter information) of the error by executing module diagnostics using the engineering tool, and correct the system parameter settings corresponding to the displayed number for the CPU No.2 and later. The settings need to be the same between all the CPU modules. (The module synchronization setting and fixed scan communication setting need to be the same between the CPU modules that use these functions.)
- When the system parameter settings are changed, update the settings of all the CPU modules connected. (The system parameter settings must be same in all the CPU modules.)

Details

- The security key set to the program does not match the one registered to the CPU module (or extended SRAM cassette).

Remedy

- Check and correct the security key setting.

Details

- The security key is set to the program, but it is not registered to the CPU module (or extended SRAM cassette).

Remedy

- Check and correct the security key setting.

Details

- The security key set to the file is corrupted and does not match the one registered to the CPU module.
- The security key registered to the CPU module is corrupted and does not match the one set to the file.

Remedy

- Write the file to the CPU module again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.

Details

- The security key is registered to the CPU module and extended SRAM cassette.

Remedy

- Check and correct the security key setting.
## 14 Multi CPU Errors (A)

### A01 Remote A password setting error 2320

#### Details
- The start I/O number of the remote password target module is set to other than 0H to 0FF0H.
- There is a problem on the slot specified by the start I/O number of the remote password setting.
  1. No module is mounted.
  2. The mounted intelligent function module does not support the remote password setting.

#### Remedy
- Set the start I/O number of the remote password target module within the range 0H to 0FF0H.
- On the specified slot, mount an intelligent function module that supports the remote password setting.

### A01 Remote A password setting error 2321

#### Details
- In the multiple CPU system, the module controlled by another CPU module is specified by the start I/O number of the remote password setting.

#### Remedy
- Check and correct the remote password setting.

### A01 Module verification error 2400

#### Details
- The module information at power-on differs from the information of modules actually mounted.
- The I/O module or intelligent function module is not mounted properly or was removed during operation.

#### Remedy
- Check the detailed information (system configuration information) of the error by executing module diagnostics using the engineering tool, and check the module corresponding to the displayed number.

### A01 Module verification error 2401

#### Details
- A CPU module, I/O module, or intelligent function module was mounted on the base unit during operation.

#### Remedy
- Check the detailed information (system configuration information) of the error by executing module diagnostics using the engineering tool, and check the module corresponding to the displayed number.
- Do not mount a CPU module, I/O module, nor intelligent function module during operation.

### A01 Fuse blown error 2420

#### Details
- The output module with a blown fuse has been detected.

#### Remedy
- Check the FUSE LED of each output module, and replace the one with the FUSE LED on.
- Check the detailed information (system configuration information) of the error by executing module diagnostics using the engineering tool, and replace the module corresponding to the displayed number.

### A01 Controlled module major error 2440

#### Details
- An error was detected in the I/O module or the NC-controlled CC-Link IE Field network module during the initial processing.

#### Remedy
- Take measures to reduce noise.
- The possible cause is a hardware failure of the error module. Contact the service center.

### A01 Controlled module major error 2442

#### Details
- An error was detected in the I/O module or the NC-controlled CC-Link IE Field network module during the run-time processing.

#### Remedy
- Take measures to reduce noise.
- The possible cause is a hardware failure of the error module. Contact the service center.
### A01 Module major error 2443

**Details**
- An error has been detected in the I/O module or intelligent function module.

**Remedy**
- The possible cause is a hardware failure of the error module. Please consult your local Mitsubishi representative.

### A01 Controlled module major error 2450

**Details**
- Notification of major error occurrence was issued from the NC-controlled CC-Link IE Field network module.
- The I/O module or the NC-controlled CC-Link IE Field network module is not mounted properly or was removed during operation.

**Remedy**
- Take measures to reduce noise.
- Check the connection status of the extension cable.
- Check the mounting status of the I/O module or the CC-Link IE Field network module.
- If the same error code is displayed again, the possible cause is a hardware failure of the error module. Contact the service center.

### A01 Another CPU module major error 2460

**Details**
- An error has been detected in another CPU module during the initial processing.

**Remedy**
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the host CPU module or another CPU module where the error has been detected. Please consult your local Mitsubishi representative.

### A01 Another CPU module major error 2463

**Details**
- An error has been detected in another CPU module.

**Remedy**
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the host CPU module or another CPU module where the error has been detected. Please consult your local Mitsubishi representative.

### A01 Another CPU module major error 2470

**Details**
- A major error has been notified from another CPU module.

**Remedy**
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the host CPU module or another CPU module where the error has been detected. Please consult your local Mitsubishi representative.

### A01 Multiple CPU error 2480

**Details**
- In the multiple CPU system, an error has been detected in the CPU module where "Stop" is set in the operation mode setting parameter.
- Any CPU module other than CPU No.1 is mounted in the inapplicable slot. (An error occurs in the CPU module mounted in the inapplicable slot.)

**Remedy**
- Check the detailed information (system configuration information) of the error by executing module diagnostics using the engineering tool, identify the error CPU module, and eliminate the error cause.
- Remove the CPU module from the inapplicable slot.

</tbody>
</table>
### A01 System bus error 24C5

**Details**
- An error was detected on the system bus.

**Remedy**
- Take measures to reduce noise.
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the base unit, extension cable, or module (I/O module or intelligent function module) connected. Please consult your local Mitsubishi representative.

### A01 System bus error 24C6

**Details**
- An error was detected on the system bus.

**Remedy**
- Take measures to reduce noise.
- If the same error code is displayed again, the possible cause is a hardware failure of the CPU module, I/O module, the CC-Link IE Field network module, the base unit or the extension cable. Contact the service center.

### A01 System bus error 24C8

**Details**
- An error was detected on the system bus.

**Remedy**
- Take measures to reduce noise.
- If the same error code is displayed again, the possible cause is a hardware failure of the extension cable, or module (I/O module or intelligent function module) connected. Please consult your local Mitsubishi representative.

### A01 System bus error 24D0

**Details**
- The extension level setting of the Q series extension base unit is overlapping with that of any other extension base units.
- An error was detected on the system bus.

**Remedy**
- Check and correct the level setting of the Q series extension base unit.
- Check the connection status of the extension cable.
- Take measures to reduce noise.
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module, base unit, or extension cable. Please consult your local Mitsubishi representative.

### A01 System bus error 24E0

**Details**
- An error was detected on the system bus.

**Remedy**
- Take measures to reduce noise.
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module or base unit. Please consult your local Mitsubishi representative.
Details
• The scan time exceeded the execution monitoring time set in parameter.
• The initial (1st) scan time exceeded the execution monitoring time set in the CPU parameters.
• The execution time of the fixed scan interrupt program exceeded the interrupt execution interval.

Remedy
• Check the detailed information (time information) of the error by executing module diagnostics using the engineering tool, check the time setting, and take either of the following actions.
  1. Check and correct the program so that it can be executed within the execution monitoring time set in parameter.
  2. Change the execution monitoring time setting to an appropriate value.
• Check and correct the fixed scan interrupt program so that the processing completes within the interrupt execution interval. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.

Details
• The scan time exceeded the execution monitoring time set in parameter.
• The 2nd or later scan time exceeded the execution monitoring time set in the CPU parameters.
• The execution time of the fixed scan interrupt program exceeded the interrupt execution interval.

Remedy
• Check the detailed information (time information) of the error by executing module diagnostics using the engineering tool, check the time setting, and take either of the following actions.
  1. Check and correct the program so that it can be executed within the execution monitoring time set in parameter.
  2. Change the execution monitoring time setting to an appropriate value.
• Check and correct the fixed scan interrupt program so that the processing completes within the interrupt execution interval. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.

Details
• Even though an interrupt was requested, there is no interrupt factor.

Remedy
• Take measures to reduce noise.
• Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module, base unit, or module (I/O module or intelligent function module) connected. Please consult your local Mitsubishi representative.

Details
• Even though an interrupt was requested, there is no interrupt factor.

Remedy
• Take measures to reduce noise.
• Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module, base unit, or module (I/O module or intelligent function module) connected. Please consult your local Mitsubishi representative.

Details
• An interrupt was requested from the module with no interrupt pointer setting.

Remedy
• Check and correct the interrupt pointer setting in the module parameters.
• Take measures so that no interrupt is requested from the module with no interrupt pointer setting.
• Check and correct the interrupt setting in the buffer memory of the intelligent function module.
• Correct the BASIC program executed in the QD51.
14 Multi CPU Errors (A)

Details
• An execution interval error of the synchronization interrupt program has been detected.
• An inter-module synchronization error has been detected.

Remedy
• Take measures to reduce noise.
• Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module, base unit, extension cable, or module (I/O module or intelligent function module) connected. Please consult your local Mitsubishi representative.

Details
• An inter-module synchronization error has been detected.

Remedy
• Take measures to reduce noise.
• Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module, base unit, extension cable, or module (I/O module or intelligent function module) connected. Please consult your local Mitsubishi representative.

Details
• A multiple CPU synchronization error has been detected.

Remedy
• Take measures to reduce noise.
• Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module or base unit. Please consult your local Mitsubishi representative.

Details
• A multiple CPU synchronization error has been detected.

Remedy
• Take measures to reduce noise.
• Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module or base unit. Please consult your local Mitsubishi representative.

Details
• When the boot function was executed, the file format processing failed.

Remedy
• Reset the CPU module, and execute the boot function again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.

Details
• When the boot function was executed, the file passwords did not match.

Remedy
• Check and correct the file password settings of the transfer source and transfer destination files.
• Delete the boot setting.

14 Multi CPU Errors (A)

### A01 Interrupt pointer setting error 3320

**Details**
- The interrupt pointer numbers used in the files are overlapping.

**Remedy**
- Check the detailed information (error location information) of the error by executing module diagnostics using the engineering tool, display the error program (step) by clicking the [Error Jump] button, and correct the program.

### A01 Hardware failure 3C00

**Details**
- A hardware failure has been detected.

**Remedy**
- Take measures to reduce noise.
- If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Contact the service center.

### A01 Hardware failure 3C01

**Details**
- A hardware failure has been detected.

**Remedy**
- Take measures to reduce noise.
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.

### A01 Hardware failure 3C02

**Details**
- A hardware failure has been detected.

**Remedy**
- Take measures to reduce noise.
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.

### A01 Hardware failure 3C03

**Details**
- A hardware failure has been detected.

**Remedy**
- Take measures to reduce noise.
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.

### A01 Hardware failure 3C0F

**Details**
- A hardware failure has been detected.

**Remedy**
- Take measures to reduce noise.
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module or extended SRAM cassette. Please consult your local Mitsubishi representative.

### A01 Hardware failure 3C10

**Details**
- A hardware failure has been detected.

**Remedy**
- Take measures to reduce noise.
- Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.
Details
• The waveform of the voltage out of the specified range has been detected in the power supply module.
• A hardware failure has been detected in the power supply module, CPU module, base unit, or extension cable.

Remedy
• Check the waveform of the voltage applied to the power supply module.
• Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the power supply module, CPU module, base unit, or extension cable. Please consult your local Mitsubishi representative.

Details
• A hardware failure has been detected.

Remedy
• Take measures to reduce noise.
• Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.

Details
• An error was detected relating to the execution order of the internal processes.

Remedy
• Take measures to reduce noise.
• If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Contact the service center.

Details
• An error has been detected in the memory.

Remedy
• Take measures to reduce noise.
• Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.

Details
• An error has been detected in the memory.

Remedy
• Take measures to reduce noise.
• Reset the CPU module, and run it again. If the same error code is displayed again, the possible cause is a hardware failure of the CPU module. Please consult your local Mitsubishi representative.

</tr>
</tbody>
</table>

| **#1027** base_J | Base axis J |
| Set the names of the basic axes that compose the plane. |
| Set the axis name set in "#1013 axname". |
| If all three items ("base_I", "base_J" and "base_K") do not need to be set, such as for 2-axis specifications, input "0", and the parameter will be blank. |
| Normally, when X, Y and Z are specified respectively for base_I, _J, _K, the following relation will be established: |
| G17: X-Y |
| G18: Z-X |
| G19: Y-Z |
| Or specify any other axis name desired. |
| **Setting range** |
| Axis names such as X, Y or Z |

| **#1028** base_K | Base axis K |
| Set the names of the basic axes that compose the plane. |
| Set the axis name set in "#1013 axname". |
| If all three items ("base_I", "base_J" and "base_K") do not need to be set, such as for 2-axis specifications, input "0", and the parameter will be blank. |
| Normally, when X, Y and Z are specified respectively for base_I, _J, _K, the following relation will be established: |
| G17: X-Y |
| G18: Z-X |
| G19: Y-Z |
| Or specify any other axis name desired. |
| **Setting range** |
| Axis names such as X, Y or Z |

| **#1029** aux_I | Flat axis I |
| Set the axis name when there is an axis parallel to "#1026 base_I". |
| **Setting range** |
| Axis names such as X, Y or Z |
Set the axis name when there is an axis parallel to 
"#1027 base_J".
---Setting range---
Axis names such as X, Y or Z

Set the axis name when there is an axis parallel to 
"#1028 base_K".
---Setting range---
Axis names such as X, Y or Z

Set the tolerable error range when the end point deviates from the center coordinate in the circular command.
---Setting range---
0 to 1.000 (mm)

Set the tap return override value for the synchronous tapping.
When "0" is set, it will be regarded as 100%.
---Setting range---
0 to 100 (%)

Set the feedrate for the F command in the F 1-digit command ("#1079 F1digit" is set to "1").
Feedrate when F1 is issued (mm/min).
When "#1246 set08/bit6" is set to "1" and F 1-digit feed is commanded, the feedrate can be increased/decreased by operating the manual handle.
---Setting range---
0 to 1000000 (mm/min)

Set the feedrate for the F command in the F 1-digit command ("#1079 F1digit" is set to "1").
Feedrate when F2 is issued (mm/min).
When "#1246 set08/bit6" is set to "1" and F 1-digit feed is commanded, the feedrate can be increased/decreased by operating the manual handle.
---Setting range---
0 to 1000000 (mm/min)

Set the feedrate for the F command in the F 1-digit command ("#1079 F1digit" is set to "1").
Feedrate when F3 is issued (mm/min).
When "#1246 set08/bit6" is set to "1" and F 1-digit feed is commanded, the feedrate can be increased/decreased by operating the manual handle.
---Setting range---
0 to 1000000 (mm/min)

Set the feedrate for the F command in the F 1-digit command ("#1079 F1digit" is set to "1").
Feedrate when F4 is issued (mm/min).
When "#1246 set08/bit6" is set to "1" and F 1-digit feed is commanded, the feedrate can be increased/decreased by operating the manual handle.
---Setting range---
0 to 1000000 (mm/min)
### #1189 spd_F5 F1 digit feedrate F5

- Set the feedrate for the F command in the F 1-digit command ("#1079 F1digit" is set to "1").
- Feedrate when F5 is issued (mm/min).
- When "+#1246 set08/bit6" is set to "1" and F 1-digit feed is commanded, the feedrate can be increased/decreased by operating the manual handle.

---Setting range---
0 to 1000000 (mm/min)

### #1506 F1_FM Upper limit of F 1-digit feedrate

- Set the maximum value up to which the F 1-digit feedrate can be changed.

---Setting range---
0 to 1000000 (mm/min)

### #1507 F1_K F 1-digit feedrate change constant

- Set the constant that determines the speed change rate per manual handle graduation in F 1-digit feedrate change mode.

---Setting range---
0 to 32767

### #8001 WRK COUNT M

- Set the M code for counting the number of the workpiece repeated machining.
- The number of the M-codes set by this parameter is counted.
- The No. will not be counted when set to "0".

---Setting range---
0 to 999

### #8002 WRK COUNT

- Set the initial value of the number of workpiece machining. The number of current workpiece machining is displayed.

---Setting range---
0 to 999999

### #8003 WRK COUNT LIMIT

- Set the maximum number of workpiece machining.
- A signal will be output to PLC when the number of machining times is counted to this limit.

---Setting range---
0 to 999999

### #8004 SPEED

- Set the feedrate during automatic tool length measurement.

---Setting range---
1 to 1000000 (mm/min)

### #8005 ZONE r

- Set the distance between the measurement point and deceleration start point.

---Setting range---
0 to 99999.999 (mm)

### #8006 ZONE d

- Set the tolerable range of the measurement point.
- An alarm will occur when the sensor signal turns ON before the range, set by this parameter, has not been reached from the measurement point, or when the signal does not turn ON after the range is passed.

---Setting range---
0 to 99999.999 (mm)
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
</table>
| #8007 OVERRIDE | Set the override value for automatic corner override.  
---Setting range---  
0 to 100 (%) |
| #8008 MAX ANGLE | Set the maximum corner opening angle where deceleration should start automatically.  
When the angle is larger than this value, deceleration will not start.  
---Setting range---  
0 to 180 (°) |
| #8009 DSC. ZONE | Set the position where deceleration starts at the corner.  
Designate at which length point before the corner deceleration should start.  
---Setting range---  
0 to 99999.999 (mm) |
| #8010 ABS. MAX. | Set the maximum value when inputting the tool compensation amount.  
A value exceeding this setting value cannot be set.  
Absolute value of the input value is set.  
(If a negative value is input, it is treated and set as a positive value.)  
When "0" is set, this parameter is disabled.  
---Setting range---  
0 to 9999.999 (mm)  
(Input setting increment applies) |
| #8011 INC. MAX. | Set the maximum value for when inputting the tool compensation amount in the incremental mode.  
A value exceeding this setting value cannot be set.  
Absolute value of the input value is set.  
(If a negative value is input, it is treated and set as a positive value.)  
When "0" is set, this parameter is disabled.  
---Setting range---  
0 to 9999.999 (mm)  
(Input setting increment applies) |
| #8038 Path recog. range | Path recognition range  
Specify the range to recognize the tool paths adjoining to the command position when the smooth fairing function is ON.  
If "0" is set, the range will be 1.000 (mm).  
---Setting range---  
0 to 100.000 (mm) |
| #8039 Comp. range limit | Compensation distance tolerance  
Specify the upper limit of the distance between the command position and compensation position when the smooth fairing function is ON.  
If you specify a negative value, operation is conducted with no tolerance limit.  
If "0" is set, the tolerance will be 0.005 (mm).  
---Setting range---  
-1.000 to 100.000 (mm) |
Set the length from the center of the normal line control axis to the tool tip. This is used to calculate the turning speed at the block joint. This is enabled during the normal line control type II.

---Setting range---
0.000 to 99999.999 (mm)

Set the radius of the arc to be automatically inserted into the corner during normal line control. This is enabled during the normal line control type I.

---Setting range---
0.000 to 99999.999 (mm)

Set the length from the tool holder to the tool tip.

---Setting range---
0.000 to 99999.999 (mm)

Set the command increment scale. The scale will be "1" when "0" is set.

---Setting range---
0 to 10000 (fold)
0: One fold

Select whether to enable the variable speed thread cutting function.

0: Disable
1: Enable

Set the minimum cutting amount for compound type thread cutting cycle (G76). The value set in this parameter will be applied when the cutting amount in compound thread cutting cycle (G76) without Q command is smaller than that in this parameter. This parameter is valid only when "#1222 aux06/bit4" is set to "1".

---Setting range---
0.000 to 99999.999 (mm)

Specify the in-position check width to be used for deceleration check of G0-G0 blocks in thread cutting cycle (G76 or G78). When this parameter is set to "0", or when the option "Programmable in-position check" is OFF, normal deceleration check method is applied.

---Setting range---
0.000 to 99.999 (mm)
0.0000 to 9.9999 (inch)

1: If a zero-travel distance block is given during turning cycle mode (G90, G92 or G94), the turning cycle is executed again.
0: If a zero-travel distance block is given during turning cycle mode (G90, G92 or G94), the turning cycle is not executed.

Not used. Set to "0.000".

</tbody>
</table>
| #8709 EXT work sign rvs | Reverse the sign of external workpiece coordinate. Select when using the external workpiece coordinate system with Z shift. | 0: External workpiece offset without sign reversal  
1: External workpiece offset with sign reversal |
| #8710 EXT work ofs invld | Set whether to enable external workpiece offset subtraction when setting the workpiece coordinate offset. | 0: Not subtract the external workpiece offset. (Conventional specification)  
1: Subtract the external workpiece offset. |
| #8711 TLM L meas axis | Set the tool length measurement axis. Set the "#1022 axname2" axis name.   | Axis name  
(Note) If the axis name is illegal or not set, the 3rd axis name will be set as default. |
#8712  TLM D meas axis
Set the tool diameter measurement axis.
Set the "#1022 axname2" axis name.

---Setting range---
Axis name
(Note) If the axis name is illegal or not set, the 1st axis name will be set as default.

#8713  Skip coord. Switch (For M system only)
Select the coordinate system for reading skip coordinate value.
Select whether to read the skip coordinate in the workpiece coordinate system or in the feature coordinate system during inclined surface machining command.
Select whether to read the skip coordinate in the workpiece coordinate system or in the workpiece installation coordinate system during workpiece installation error compensation.
0: Workpiece coordinate system
1: Feature coordinate system/Workpiece installation coordinate system

#8714  Thrdrecut lead ax
Specify the name of lead axis that performs thread recutting.
If any nonexistent axis name is specified, the 1st axis of the part system is used as a lead axis for thread recutting.
If the parameter "#8714 Thrdrecut lead ax" is unspecified, Z axis is set as the parameter value at power ON.

---Setting range---
A,B,C,U,V,W,X,Y,Z

#8715  Thread recut SP#
Specify the No. or name of spindle that performs thread recutting.
If 0 or any nonexistent spindle No. or name is specified, the 1st spindle is used for thread recutting.

---Setting range---
Spindle No. method: 0 to 8
Spindle name method: 0 to 9
(Default: 0)

(PR) #8716  EXT/Wrksft Share (for L system only)
Set this parameter to "1" if you wish to disable the external workpiece coordinate system offset.
This parameter is enabled when "#11056 Workshift invalid (worksft invalid)" is "0".
0: Use the external work coordinate offset (EXT) to implement compensation
1: Implement compensation without using the external work coordinate offset (EXT)

#12067  Smth Corn spd coef
Set the compensation coefficient to adjust a path error or clamp speed in the corner while tolerance control is ON.
This parameter is enabled during tolerance control. Thus set this parameter if you wish to use different clamp speed according to ON/OFF of tolerance control.
When "0" is set in this parameter, the standard value (100%) is applied.

---Setting range---
0 to 2000 (%)

#12068  Smoothing range
Spline interpolation 2: Smoothing range
Normally set "0" in this parameter.
If you run a program with short line segments and its reciprocating paths are uneven, set the parameter to about 3 to 5 times the length of the programmed line segments.

---Setting range---
0.000 to 10.000 (mm)
### #12069 Corner angle

**Tolerance control: Corner recognition angle**

Specify the corner recognition angle. Normally set to "0".

---**Setting range---**

0.000 to 180.000 (°)

### #19001 Syn.tap(S)cancel

0: Retain the spindle speed (,S) in synchronous tap return

1: Cancel the spindle speed (,S) in synchronous tap return with G80

The same value as "#1223 aux07/bit6" will be reflected. When either setting changes, the other will change accordingly.

### #19002 Zero-point mark

Not used.

### #19003 PRG coord rot type

Select the start point of the first travel command after coordinate rotation by program is commanded.

0: Calculate the end position using the current position on the local coordinate system before rotating, without rotating the start point in accordance with the coordinates rotation.

1: Calculate the end position, assuming that the start point rotates in accordance with the coordinates rotation.

### #19004 Tap feedrate limit

Set the upper limit of the cutting feed rate in synchronous tapping.

---**Setting range---**

0 to 1000 (mm/rev)

(Note) Setting "0" disables this parameter.

When the commanded cutting feed rate in synchronous tapping exceeds this setting, a program error (P184) will occur.

### #19005 manual Fcmd2 clamp

Set a clamp speed coefficient (%) for manual speed command 2.

The feed rate is clamped at the command feed rate or rapid traverse rate for automatic operation, which was multiplied by this parameter's value.

(Note) This setting is valid only for manual speed command 2.

---**Setting range---**

0 to 1000 (%)

0: 100% (Default value)

### (PR) #19006 EOR Disable

Set whether to handle an EOR(%) in machining program as the end of program in automatic operation, graphic check, program transfer to NC memory, program editing, and buffer correction. Tape operation, Computer Link B, and serial input/output are not included.

0: An EOR(%) is handled as the end of machining program.

1: An EOR(%) is not handled as the end of machining program. The program will be read to the end of file.

### #19007 Prg check constant

Set the speed constant to be used for the program check operation function.

---**Setting range---**

0 to 60000

### #19008 PRM coord rot type

Not used. Set to "0".

### #19009 Corner check angle

Not used. Set to "0".

### #19010 Corner check width

Not used. Set to "0.000".

| **#19406** Hob retract ON at alarm | Select whether to enable the retract at an alarm during hobbing.  
0: Disable  
1: Enable  
(Standard value: 0) |
| **#19407** Hob retract acceleration deceleration OFF | Select whether to disable the acceleration/deceleration of a retract.  
0: Enable  
1: Disable  
(Standard value: 0) |
| **#19417** Hole dec check 2 | This is enabled when #1253 set25 bit2 is 1.  
The operation at the hole bottom and the hole drilling stop position is as below.  
0: Perform no deceleration check.  
1: Perform command deceleration check.  
2: Perform in-position check.  
<br><Target fixed cycles>  
Machining center: G81, G82, G83, G73  
Lathe: G83, G87, G83.2 |
| **#19418** Arc inside min ovr (for M system only) | Not used.                                                                   |
| **#19419** Timing sync system | Specify the counterpart part system for timing synchronization or for balance cut when the part system No. is omitted.  
Set the part system No. in a way that reflects the combination of two part systems as follows.  
(Example) Timing synchronization between Part systems 1 and 3  
Enter 3 for the 1st part system, and enter 1 for the 3rd part system.  
(Note) When 0 is set, timing synchronization is carried out between Part systems 1 and 2.  
---Setting range---  
0 to 8 |
| **#19420** Arc inside ovr ON (for M system only) | Not used.                                                                   |
| **#19421** Arc inside ovr typ (for M system only) | Not used.                                                                   |
| **#19425** ManualB Std R1 | Set a radius used as standard for the rotary axis speed.  
When the setting value of #19425 is larger than that of "#19427 ManualB Std R2", #19425 setting will be used as surface speed control standard radius 2. #19427 setting will be used as surface speed control standard radius 1.  
---Setting range---  
0 to 99999.999 (mm) |
### #19426 ManualB Std F1

This sets the rotary axis speed for surface speed control standard radius 1 (ManualB Std R1).

When the setting value of #19426 is larger than that of "#19428 ManualB Std F2", #19426 setting will be used as surface speed control standard speed 2: #19427 setting will be used as surface speed control standard speed 1.

--- Setting range ---

1 to 1000000 (°/min)

### #19427 ManualB Std R2

Set a radius used as standard for the rotary axis speed.

When the same value is set as "#19425 ManualB Std R1", the surface speed control standard speed 1 (ManualB Std F1) will be selected as the rotary axis speed if the radius is less than that value. The surface speed control standard speed 2 (ManualB Std F2) is selected if larger than the set value.

--- Setting range ---

0 to 99999.999 (mm)

### #19428 ManualB Std F2

Set the rotary axis speed for surface speed control standard radius 2 (ManualB Std R2).

--- Setting range ---

1 to 1000000 (°/min)

#1126 PB_G90: Playback G90

Select the method to command the playback travel amount in the playback editing.

0: Incremental value
1: Absolute value

#1128 RstVCI: Clear variables by resetting

Select how to handle the common variables when resetting.

0: Common variables won't change after resetting.
1: Common variables will be cleared #100 to #199 by resetting.

#1129 PwrVCI: Clear variables by power-ON

Select how to handle the common variables when the power is turned ON.

0: The common variables are in the same state as before turning the power OFF.
1: Common variables will be cleared #100 to #199 when the power is turned ON.

#1302 AutoRP: Automatic return by program restart

Select the method to move to the restart position when restarting the program.

0: Move the system manually to the restart position and then restart the program.
1: The system automatically moves to the restart position at the first activation after the program restarts.

#8101 MACRO SINGLE

Select how to control the blocks where the user macro command continues.

0: Do not stop while macro blocks continue.
1: Stop every block during signal block operation.

#8102 COLL. ALM OFF

Select the interference (bite) control to the workpiece from the tool diameter during tool radius compensation and nose R compensation.

0: An alarm will be output and operation stops when an interference is judged.
1: Changes the path to avoid interference.

#8103 COLL. CHK OFF

Select the interference (bite) control to the workpiece from the tool diameter during tool radius compensation and nose R compensation.

0: Performs interference check.
1: Does not perform interference check.

#8105 EDIT LOCK B

Select the edit lock for program Nos. 8000 to 9999 in the memory.

0: Editing possible
1: Prohibit the editing of above programs.

When "1" is set, the file cannot be opened.

#8106 G46 NO REV-ERR (for L system only)

Select the control for the compensation direction reversal in G46 (nose R compensation).

0: An alarm will be output and operation will stop when the compensation direction is reversed (G41 -> G42, G42 -> G41).
1: An alarm won't occur when the compensation direction is reversed, and the current compensation direction will be maintained.

#8107 R COMPENSATION

Select whether to move to the inside because of a delay in servo response to a command during arc cutting mode.

0: Move to the inside, making the arc smaller than the command value.
1: Compensate the movement to the inside.

</tbody>
</table>
#8115  **G83/87 RAPID**
Select the operation upon the completion of each step in deep hole drilling cycle (G83, G87).
- 0: Returns to R point before performing next step.
- 1: Returns by the amount of d (parameter setting) setting value before performing next step.

#8116  **CoordRotPara invd**
Not used. Set to "0".

#8117  **OFS Diam DESIGN**
Select tool radius or tool diameter compensation amount to be specified.
- 0: Tool radius compensation amount
- 1: Tool diameter compensation amount

#8119  **Comp. unit switch**
Select the setting unit of compensation amount that has no decimal point.
- 0: 1mm (or 1 inch) unit
- 1: The minimum command unit (follows "#1003 iunit")

#8120  **FONT SELECTION**
Not used.

#8121  **Screen Capture**
Not used.

#8122  **Keep G43 MDL M-REF**
Select whether to keep the tool length offset by high speed manual reference position return during tool length offset.
- 0: Will not be kept (Cancel)
- 1: Hold

#8123  **H-spd retract ON**
Select whether to enable the drilling cycle at high-speed retract in fixed cycle for drilling.
- 0: Disable
- 1: Enable

#8124  **Mirr img at reset**
Select the operation type of the mirror image by parameter setting and the mirror image by external input.
- 0: The current mirror image is canceled, and new mirror image will start with the machine position at reset as the mirror center.
- 1: The mirror center is kept to continue the mirror image.

#8125  **Check Scode in G84**
Select how to operate when there is no S command in synchronous tapping block.
- 0: Use the spindle function modal value as S-command value.
- 1: Output a program error (P181).

#8126  **Disable op tone**
Not used.

#8127  **R-Navi manu F coor**
Not used.

#8129  **Subpro No. select**
Select the subprogram No. to be called preferentially in subprogram control.
- 0: Commanded program No.
- 1: Four-digit program No. beginning with O No.
- 2: Eight-digit program No. beginning with O No.

(Note) The program to be called in user macro, figure rotation, macro interruption and compound type fixed cycle also follows this setting.

</tbody>
</table>

There are some items in the specifications that can be used or cannot be used according to the value set in this parameter.

The file structure may also change depending on the compensation data type.

(Note) When this parameter is changed, the file system will be changed after the power is turned ON.

So always execute format.

The new format will be enabled after turning the power ON again.

Setting order

(1) cmdtyp changeover -> (2) Turn power ON again -> (3) Format -> (4) Turn power ON again

(Note) Compensation type III can be selected for M system by setting #1046.

<tr>
<td>1: Use axis name for the absolute and incremental commands.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(The axis name in "#1013 axname" will be the absolute command, "#1014 incax" will be the incremental command.)
#1085 G00Drn  G00 dry run

Select whether to apply dry run (feed at manual setting speed instead of command feedrate) to the G00 command.

0: Not apply to G00. (move at rapid traverse rate)
1: Apply to G00. (move at manual setting speed)

#1086 G0lntp  G00 non-interpolation

Select the G00 travel path type.

0: Move linearly toward the end point. (interpolation type)
1: Move to the end point of each axis at the rapid traverse feedrate for each axis. (non-interpolation)

(Note) If this parameter is set to "1", neither of the following functions will be available: rapid traverse constant-gradient acceleration/deceleration and rapid traverse constant-gradient multi-step acceleration/deceleration.

#1148 I_G611  Initial hi-precis

Select the modal state at power ON from among the following: high-accuracy control mode, high-speed high-accuracy control I mode, high-speed high-accuracy control II mode or high-speed high-accuracy control III mode.

0: G08P0/G64 (cutting) mode
1: G08P1/G61.1 (high-accuracy control) mode
2: G05.1Q1 (high-speed high-accuracy control I) mode
3: G05P10000 (high-speed high-accuracy control II) mode
4: G05P20000 (high-speed high-accuracy control III) mode

#8173 Hold intr amount

Select whether to clear or hold the interruption amount after the "NC reset 1 (or 2)" signal is ON when the manual ABS switch is OFF.

0: Clear (Reset the coordinate deviation due to the interruption)
1: Hold

#8174 T meas. in mirror

Select the measurement operation for mirror-imaged axes during the manual tool length measurement 1 or 2.

0: Set the measurement result as the tool length.
1: Reverse the sign of measurement result and set it as the tool length.
## 15.5 Axis Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>#1063</td>
<td>mandog</td>
</tr>
<tr>
<td>0: High speed return</td>
<td></td>
</tr>
<tr>
<td>1: Dog-type</td>
<td></td>
</tr>
</tbody>
</table>

### #8201 AX. RELEASE
Select the function to remove the control axis from the control target.

0: Control as normal.
1: Remove from control target.

### #8202 OT-CHECK OFF
Select whether to enable the stored stroke limit II function set in #8204 and #8205.

0: Enable
1: Disable

### #8203 OT-CHECK-CANCEL
When the simple absolute position method (#2049 type is "9") is selected, the stored stroke limits I, II (or IIB) and IB can be disabled until the first reference position return is executed after the power is turned ON.

0: Enable (according to #8202)
1: Temporarily cancel

(Note) "#8203 OT-CHECK-CANCEL" affects all the stored stroke limits.

### #8204 OT-CHECK-N
Set the coordinates of the (-) direction in the movable range of the stored stroke limit II or the lower limit coordinates of the prohibited range of stored stroke limit IIB.

If the sign and value are the same as #8205, the stored stroke limit II (or IIB) will be invalid.

If the stored stroke limit IIB function is selected, the prohibited range will be between two points even when #8204 and #8205 are set in reverse. When II is selected, the entire range will be prohibited if #8204 and #8205 are set in reverse.

---Setting range---
-99999.999 to 99999.999 (mm)

### #8205 OT-CHECK-P
Set the coordinates of the (+) direction in the movable range of the stored stroke limit II or the upper limit coordinates of the prohibited range of stored stroke limit IIB.

---Setting range---
-99999.999 to 99999.999 (mm)

### #8206 TOOL CHG. P
Set the coordinates of the tool change position for G30. n (tool change position return).
Set with coordinates in the basic machine coordinate system.

---Setting range---
-99999.999 to 99999.999 (mm)

### #8207 G76/87 IGNR (for M system only)
Select whether to enable the shift operation at G76 (fine boring) and G87 (back boring).

0: Shift effective
1: No shift
#8208  G76/87 (-) (for M system only)
Select the shift direction at G76 and G87.
0: Shift to (+) direction
1: Shift to (-) direction

#8209  G60 SHIFT (for M system only)
Set the last positioning direction and distance for a G60 (unidirectional positioning) command.
---Setting range---
-99999.999 to 99999.999 (mm)

#8210  OT INSIDE
Select whether the stored stoke limit function set by #8204 and #8205 prevents the machine from moving to the inside or outside of the specified range.
0: Inhibits outside area (Select stored stroke limit II.)
1: Inhibits inside area (Select stored stroke limit IIB.)

#8211  MIRR. IMAGE
Select whether to enable the parameter mirror image function.
0: Disable
1: Enable

(PR) #8213  Rotation axis type
Select the rotation type (short-cut valid/invalid) or linear type (workpiece coordinate linear type/all coordinate linear type).
This parameter is enabled only when "#1017 rot" is set to "1". (Note)
0: Short-cut invalid
1: Short-cut valid
2: Workpiece coordinate linear type
3: All coordinate linear type

(Note) The movement method is as follows by the specified rotation axis type.

<Workpiece coordinate value>
0, 1: Display range  0° to 359.999°
2, 3: Display range  0° to ±99999.999°

<Machine coordinate value/relative position>
0, 1, 2: Display range  0° to 359.999°
3: Display range  0° to ±99999.999°

<ABS command>
0: The incremental amount from the end point to the current position is divided by 360, and the axis moves by the remainder amount according to the sign.
1: Moves with a short-cut to the end point.
2, 3: In the same manner as the normal linear axis, moves according to the sign by the amount obtained by subtracting the current position from the end point.

<INC command>
0, 1, 2, 3: Moves in the direction of the commanded sign by the commanded incremental amount starting at the current position.

<Reference position return>
0, 1, 2: The movement to the middle point applies to the ABS command or the INC command. Returns with movement within 360 degrees from the middle point to reference position.
3: The movement to the middle point applies to the ABS command or the INC command. Moves and returns in the reference position direction for the difference from the current position to the reference position.
#8215  TLM std length
Set the TLM standard length.
TLM standard length is the distance from a tool replacement point (reference position) to the measurement
basic point (surface) which is used to measure the tool length.
(The same value as "#2016 tlml+" will be reflected. When either setting changes, the other will change ac-
cordingly.)
---Setting range---
-99999.999 to 99999.999 (mm)

#8216  Type in G28 return
Select the performance after establishing the reference position in reference position return command.
0: Moves to the reference position.
1: Won't move to the reference position.

#8217  Check start point
Not used.

#8218  Dir cmd retrct amt
Not used. Set to "0.000".

#8219  Hob retract amount 1
Set the retract amount using the radius value when the Hob retract amount selection signal is OFF. (Radius
value)
Retract is carried out in the negative direction if a negative value is set.
---Setting range---
-99999.999 to 99999.999 (mm)

#8220  Hob retract amount 2
Set the retract amount using the radius value when the Hob retract amount selection signal is ON. (Radius
value)
Retract is carried out in the negative direction if a negative value is set.
---Setting range---
-99999.999 to 99999.999 (mm)

#8221  Hob retract speed
Set the retract speed during hobbing.
---Setting range---
1 to 1000000 (mm/min)

(PR) #8224  Posn display range
Current position display range
Select the display range of the current position.
0: 0 to 359.999 deg
1: -99999.999 to 99999.999 deg

(PR) #8225  Wk coord at R ret.
Workpiece coordinate position displayed right after automatic reference position return
Select whether to apply a range of 0 to 360 degrees to the workpiece coordinate position displayed right after
automatic reference position return if the said position is out of the range of 0 to 360 degrees.
0: Display the position in a range of 0 to 360 degrees
1: Not display the position in a range of 0 to 360 degrees

#8226  Wk position check
Workpiece position check
Select whether to check a difference of workpiece coordinate position between when NC is reset and when
program operation is started, when both High-speed simple program check mode ON (X712) and High-
speed simple program check: Coordinate position check ON (X713) are set to ON.
0: Disable the check
1: Enable the check

15.7 Barrier Data (for L system only)

#8300  P0 (for L system only)
Set the reference X-coordinates of the chuck and the tail stock barrier.
Set the center coordinate of workpiece by the basic machine coordinate system. (radius value)
---Setting range---
-99999.999 to 99999.999 (mm)

#8301  P1 (for L system only)
Set the area of the chuck and tail stock barrier.
X axis: Set the coordinate from the workpiece center (P0). (radius value)
Z axis: Set the coordinates in the basic machine coordinate system.
---Setting range---
-99999.999 to 99999.999 (mm)

#8302  P2 (for L system only)
Set the area of the chuck and tail stock barrier.
X axis: Set the coordinate from the workpiece center (P0). (radius value)
Z axis: Set the coordinates in the basic machine coordinate system.
---Setting range---
-99999.999 to 99999.999 (mm)

#8303  P3 (for L system only)
Set the area of the chuck and tail stock barrier.
X axis: Set the coordinate from the workpiece center (P0). (radius value)
Z axis: Set the coordinates in the basic machine coordinate system.
---Setting range---
-99999.999 to 99999.999 (mm)

#8304  P4 (for L system only)
Set the area of the chuck and tail stock barrier.
X axis: Set the coordinate from the workpiece center (P0). (radius value)
Z axis: Set the coordinates in the basic machine coordinate system.
---Setting range---
-99999.999 to 99999.999 (mm)

#8305  P5 (for L system only)
Set the area of the chuck and tail stock barrier.
X axis: Set the coordinate from the workpiece center (P0). (radius value)
Z axis: Set the coordinates in the basic machine coordinate system.
---Setting range---
-99999.999 to 99999.999 (mm)

#8306  P6 (for L system only)
Set the area of the chuck and tail stock barrier.
X axis: Set the coordinate from the workpiece center (P0). (radius value)
Z axis: Set the coordinates in the basic machine coordinate system.
---Setting range---
-99999.999 to 99999.999 (mm)

#8310  Barrier ON (for L system only)
Select whether to enable the chuck and tailstock barrier.
0: Disable (Setting from special display unit will be enabled)
1: Enable
### #8311  P7 (for L system only)
Set the area of the left spindle section.
- **X axis:** Set the coordinate from the workpiece center (P0). (radius value)
- **Z axis:** Set the coordinates in the basic machine coordinate system.
--- Setting range ---
-99999.999 to 99999.999 (mm)

### #8312  P8 (for L system only)
Set the area of the left spindle section.
- **X axis:** Set the coordinate from the workpiece center (P0). (radius value)
- **Z axis:** Set the coordinates in the basic machine coordinate system.
--- Setting range ---
-99999.999 to 99999.999 (mm)

### #8313  P9 (for L system only)
Set the area of the right spindle section.
- **X axis:** Set the coordinate from the workpiece center (P0). (radius value)
- **Z axis:** Set the coordinates in the basic machine coordinate system.
--- Setting range ---
-99999.999 to 99999.999 (mm)

### #8314  P10 (for L system only)
Set the area of the right spindle section.
- **X axis:** Set the coordinate from the workpiece center (P0). (radius value)
- **Z axis:** Set the coordinates in the basic machine coordinate system.
--- Setting range ---
-99999.999 to 99999.999 (mm)

### #8315  Barrier Type (L) (for L system only)
Select the shape of the left chuck and tailstock barrier.
- 0: No area
- 1: Chuck
- 2: Tailstock

### #8316  Barrier Type (R) (for L system only)
Select the shape of the right chuck and tailstock barrier.
- 0: No area
- 1: Chuck
- 2: Tailstock

### #8317  ELIV. AX. Name (for L system only)
Set the name of the delivery axis when the right chuck and tailstock barrier is movable.
When using the multi-part system method and the delivery axis is an axis in the other part system, designate the axis including the part system as 1A, 1B or 2A, 2B. If the part system is not designated as A and B, the set part system will be used.
--- Setting range ---
- A/B/.. (axis name)
- 1A/1B/..
- 2A/2B/.. (with part system designated)
- 0: Cancel
### #8318 Stock Angle (L) (for L system only)

Set the angle for the left tailstock end section.
The angle will be interpreted as 90° if there is no setting (when "0" is set).

---Setting range---

0 to 180 (°)
0: 90° (default)

### #8319 Stock Angle (R) (for L system only)

Set the angle for the right tailstock end section.
The angle will be interpreted as 90° if there is no setting (when "0" is set).

---Setting range---

0 to 180 (°)
0: 90° (default)

</tbody>
</table>
Set a compensation coefficient for reducing a control error in the reduction of a corner roundness and arc radius.

The larger the set value is, the smaller the theoretical error will be. However, since the speed at the corner goes down, the cycle time will be extended.

Coefficient = 100 - setting value

(Note) This function will be enabled when "#8021 COMP_CHANGE" is set to "0".

---Setting range---

0 to 99 (%)

Theoretical radius decrease error amount

Displays the theoretical radius decrease error amount, $\Delta R$ (mm), from the automatic calculation by NC.

Theoretical radius decrease amount in arc

R5mm arc deceleration speed

Displays a deceleration speed (mm/min) along an arc of 5 (mm) radius.

R1mm arc deceleration speed

Displays a deceleration speed (mm/min) along an arc of 1 (mm) radius.
Set the minimum value of an angle (external angle) that should be assumed to be a corner. When an inter-block angle (external angle) in high-accuracy mode is larger than the set value, it will be determined as a corner and the speed will go down to sharpen the edge.

If the set value is smaller than \( \theta \), the speed goes down to optimize the corner.

(Note) If "0" is set, it will be handled as "5" degrees.

---Setting range---

0 to 89 (°)

0: 5 degree  (Equals to setting "5")

Theoretical corner dull amount

Displays the corner dull amount \( \Delta c \)(mm) in respect to the corner’s angle (external angle) \( \theta \)(°).

Path after servo control

Path after soft acceleration/deceleration 2

Corner deceleration speed

Display corner deceleration speed \( c \) (mm/min) for the corner of the angle (external angle) with \( \theta \)(°).

Theoretical dull amount at 90 degree

Display corner dull amount when the angle is 90 degree.

Corner deceleration speed at 90 degree

Display corner deceleration speed when the angle is 90 degree.

Select whether to share or separate the compensation coefficient at the corner/curve during the high-accuracy control mode.

0: Share ("#8019 R COMP" is applied.)

1: Separate

* Corner: #8022 CORNER COMP
* Curve: #8023 CURVE COMP

(Note) Set "1" when using SSS/EasySSS control.
### #8022 CORNER COMP

Set the compensation coefficient to further reduce or increase the roundness at the corner during the high-accuracy control mode.

Coefficient = 100 - setting value

(Note) This is valid when "#8021 COMP CHANGE" is set to "1".

Reference to "#8020 Corner decreasing speed" for theoretical corner roundness amount, corner decreasing speed, theoretical 90 degree dull amount, 90 degree corner decreasing speed.

---Setting range---
-1000 to 99 (%)

### #8023 CURVE COMP

Set the compensation coefficient to further reduce or increase the radius reduction amount at the curve (arc, involute, spline) during the high-accuracy control mode.

Coefficient = 100 - setting value

(Note) This is valid when "#8021 COMP CHANGE" is set to "1".

For theoretical radius reduction error amount, R5mm arc deceleration speed and R1mm arc deceleration speed, refer to "#8019 R COMP".

---Setting range---
-1000 to 99 (%)

### #8025 SPLINE ON

For M system only.

Specify whether to enable the fine spline function.

0: Disable the fine spline function.
1: Enable the fine spline function.

Spline interpolation will be valid during G61.2 modal regardless of this setting.

### #8026 CANCEL ANG. (for M system only)

Set the angle where the spline interpolation is temporarily canceled.

When the angle made by blocks exceeds this parameter setting value, spline interpolation will be canceled temporarily. In consideration of the pick feed, set a value a little smaller than the pick feed angle.

---Setting range---
0 to 180 (°)
0: 180 (°)

### #8027 Toler-1 (for M system only)

Set the maximum chord error (tolerance) in a block that includes an inflection point. Set the tolerance applicable when the applicable block is developed to fine segments by CAM. (normally about 10 μm)

When "0.000" is set, the applicable block will be linear.

---Setting range---
0.000 to 100.000 (mm)

### #8028 Toler-2 (for M system only)

Set the maximum chord error (tolerance) in a block that includes no inflection point. Set the tolerance applicable when the applicable block is developed to fine segments by CAM. (normally about 10 μm)

When "0.000" is set, the applicable block will be linear.

---Setting range---
0.000 to 100.000 (mm)

### #8029 FairingL (for M system only)

Set the length of the block subject to fairing.

(Enabled when "#8033 Fairing ON" is set to "1").

---Setting range---
0 to 100.000 (mm)
**#8030 MINUTE LENGS (for M system only)**

Set the fine-segment length where the spline interpolation is temporarily canceled.

When the length of one block exceeds this parameter setting value, spline interpolation is canceled temporarily and linear interpolation is performed. Set a value a little smaller than one block length of the program. If "-1" is set, spline interpolation will be performed regardless of block length.

---Setting range---
-1 to 127 (mm)
0: 1 (mm)

**#8033 Fairing ON (for M system only)**

Select whether or not to use the fairing or smooth fairing function.

0: Use neither of them
1: Use the fairing function
2: Use the smooth fairing function

**#8034 AccClamp ON (for M system only)**

Select the method for clamping the cutting speed.

0: Clamp with parameter "#2002 clamp" or the corner deceleration function.
1: Clamp the cutting speed with acceleration judgment. (Enabled when "#8033 Fairing ON" is set to "1".)

**#8036 CordecJudge (for M system only)**

Select the condition to decide a corner.

0: A corner is decided from the angle of the neighboring block.
1: A corner is decided from the angle of the neighboring block, excluding minute blocks.
(Enabled when "#8033 Fairing ON" is set to "1".)

**#8037 CorJudgeL (for M system only)**

Set the length of the block to be excluded when deciding a corner.
(Enabled when "#8036 CordecJudge" is set to "1").

---Setting range---
0 to 99999.999 (mm)

**#8038 Path recog. range**

Path recognition range
Specify the range to recognize the tool paths adjoining to the command position when the smooth fairing function is ON.
If "0" is set, the range will be 1.000 (mm).

---Setting range---
0 to 100.000 (mm)

**#8039 Comp. range limit**

Compensation distance tolerance
Specify the upper limit of the distance between the command position and compensation position when the smooth fairing function is ON.
If you specify a negative value, operation is conducted with no tolerance limit.
If "0" is set, the tolerance will be 0.005 (mm).

---Setting range---
-1.000 to 100.000 (mm)

**(PR) #8040 High-SpeedAcc**

High-speed high-accuracy control-enabled part system
Select whether to enable the simultaneous use of the high-accuracy control and high-speed machining mode (including the high-speed high-accuracy control I and II) for each part system.
0: Not enable
1: Enable
"1" can be set for up to two part systems. If you set "1" for three or more part systems, the alarm (Y51 0032) will result.
Set whether to enable the SSS control with G05 P10000.

0: Disable
1: Enable

Set the maximum value of the range for recognizing the shape.

To eliminate the effect of steps or errors, etc., set a large value. To enable sufficient deceleration, set a small value.

If "0.000" is set, the standard value (1.000mm) will be applied.

---Setting range---
0 to 100.000 (mm)

Set the clamp speed at the curved section configured of fine segments.

Coefficient = \sqrt{setting value}

---Setting range---
1 to 100

Set the width of the step at which the speed is not to be decelerated. (Approximately the same as the CAM path difference [Tolerance].)

If "0" is set, the standard value (5μm) will be applied.
If a minus value is set, the speed will decelerate at all minute steps.

---Setting range---
-1.000 to 0.100 (mm)

Set the time to wait for deceleration when the speed FB does not drop to the clamp speed.

---Setting range---
0 to 100 (ms)

Deceleration coefficient for SSS control ON

Select whether to enable the speed coefficients ("#8097 Corner deceleration coefficient for SSS control", "#8098 Arc clamp speed coefficient for SSS control") that are used for compensating for a path error and clamp speed under SSS control.

0: Disable
1: Enable

Corner deceleration coefficient for SSS control

Specify the compensation coefficient to be used for adjusting a path error and clamp speed at a corner under SSS control. This parameter is enabled during SSS control. Thus set this parameter if you wish to use different compensation coefficients according to ON/OFF of SSS control (If you wish to adjust a path error and clamp speed at a corner, use "#8022 CORNER COMP").

If the setting value is smaller, the theoretical path error will decrease, but the cycle time may be longer because the corner deceleration speed will slow down.

Note that this parameter is enabled when "#8096 Deceleration coefficient for SSS control ON" is "1".

When "0" is set in this parameter, the standard value (300%) is applied.

---Setting range---
0 to 2000 (%)
### #8098 Arc clamp spd coef
Arc clamp speed coefficient for SSS control
Specify the compensation coefficient to be used for adjusting a path error and clamp speed on an arc under SSS control. This parameter is enabled during SSS control. Thus set this parameter if you wish to use different compensation coefficients according to ON/OFF of SSS control (if you wish to adjust a path error and clamp speed on an arc, use "#8023 CURVE COMP").
If the setting value is smaller, the theoretical path error will decrease, but the cycle time may be longer because the arc clamp speed will slow down.
Note that this parameter is enabled when "#8096 Deceleration coefficient for SSS control ON" is "1".
When "0" is set in this parameter, the standard value (100%) is applied.

---Setting range---
0 to 2000 (%)

### #12052 Jerk_filtG0 G00 jerk filter
Specify the time constant of filter that is used for smoothing the change of jerk when pre-interpolation acceleration/deceleration is performed in cutting feed.
This filter causes no path error, as the filter is applied to the resultant speed calculated before interpolation.
If you specify the jerk filter time constant, the time constants of each filter will be as follows:
- S-shape filter time constant
  "#1569 SfiltG0" - "Jerk_filtG0"
- Jerk filter time constant
  "Jerk_filtG0"

---Setting range---
0 to 50 (ms)

### #12053 EachAxAccCntrl Enable per-axis acceleration tolerance control
Not used. Set to "0".

### #12060 VblAccPreInt Variable-acceleration pre-interpolation acceleration/deceleration ON
Not used. Set to "0".

### #12067 Smth Corn spd coef
Set the compensation coefficient to adjust a path error or clamp speed in the corner while tolerance control is ON.
This parameter is enabled during tolerance control. Thus set this parameter if you wish to use different clamp speed according to ON/OFF of tolerance control.
When "0" is set in this parameter, the standard value (100%) is applied.

---Setting range---
0 to 2000 (%)

### #12068 Smoothing range
Spline interpolation 2: Smoothing range
Normally set "0" in this parameter.
If you run a program with short line segments and its reciprocating paths are uneven, set the parameter to about 3 to 5 times the length of the programmed line segments.

---Setting range---
0.000 to 10.000 (mm)

### #12069 Corner angle
Tolerance control: Corner recognition angle
Specify the corner recognition angle. Normally set to "0".

---Setting range---
0.000 to 180.000 (°)
## 15.9 High-accuracy Control Axis Parameters

<table>
<thead>
<tr>

</tbody>
</table>
Specify the compensation coefficient to be used for adjusting a path error and clamp speed at a corner for each axis during the high-accuracy control mode. If the setting value is larger, the edge accuracy will improve, but the cycle time may be longer because the corner speed will slow down.

This parameter is disabled when the per-axis acceleration tolerance control is OFF.

---Setting range---
-1000 to 99 (%)
15.10 Operation Parameters

Select the type of the following counters on the Monitor screen.

- Normal display: Upper-left counter
- 2-, 3- or 4-part system simultaneous display (four counters): Upper-left counter
- 2-, 3- or 4-part system simultaneous display (two counters): Upper counter
- 2-, 3- or 4-part system simultaneous display (one counter): Counter

Either relative position or tip work position is displayed by default.

(Note 1) 3- or 4-part system simultaneous display is not available.
(Note 2) Tip work position is displayed when 5-axis-related option is ON.

1: Current position
2: Workpiece coordinate position
3: Machine position
4: Program position
8: Remain command
9: Manual interrupt amount
10: Next command
11: Restart position
12: Remain distance
16: Tip workpiece coordinate position
18: Tool axis movement
19: Tip machine position
20: Relative position
21: Table coordinate position
22: Workpiece installation position
23: Inclined surface coordinate position

---Setting range---

1 to 27
#8902  Counter type 2

Select the type of the following counters on the Monitor screen.

- Normal display: Lower-left counter
- 2-, 3- or 4-part system simultaneous display (four counters): Lower-left counter
- 2-, 3- or 4-part system simultaneous display (two counters): Lower counter

Programmed position is displayed by default.

(Note 1) 3- or 4-part system simultaneous display is not available.

1: Current position
2: Workpiece coordinate position
3: Machine position
4: Program position
8: Remain command
9: Manual interrupt amount
10: Next command
11: Restart position
12: Remain distance
16: Tip workpiece coordinate position
18: Tool axis movement
19: Tip machine position
20: Relative position
21: Table coordinate position
22: Workpiece installation position
23: Inclined surface coordinate position

---Setting range---

1 to 27

#8903  Counter type 3

Select the type of the following counters on the Monitor screen.

- Normal display: Upper-right counter
- 2-, 3- or 4-part system simultaneous display (four counters): Upper-right counter

Remaining command is displayed by default.

(Note 1) 3- or 4-part system simultaneous display is not available.

1: Current position
2: Workpiece coordinate position
3: Machine position
4: Program position
8: Remain command
9: Manual interrupt amount
10: Next command
11: Restart position
12: Remain distance
16: Tip workpiece coordinate position
18: Tool axis movement
19: Tip machine position
20: Relative position
21: Table coordinate position
22: Workpiece installation position
23: Inclined surface coordinate position

---Setting range---

1 to 27
Select the type of the following counters on the Monitor screen.

- Normal display: Lower-right counter
- 2-, 3- or 4-part system simultaneous display (four counters): Lower-right counter

Next command is displayed by default.

(Note 1) 3- or 4-part system simultaneous display is not available.

1: Current position
2: Workpiece coordinate position
3: Machine position
4: Program position
8: Remain command
9: Manual interrupt amount

#8905 Counter type 5

Select the type of counter on the Monitor screen (Simple display). Either relative position or tip work position is displayed by default.

(Note 1) Tip work position is displayed when 5-axis-related option or program format switch option is ON.

1: Current position
2: Workpiece coordinate position
3: Machine position
4: Program position
8: Remain command
9: Manual interrupt amount
10: Next command
11: Restart position
12: Remain distance
16: Tip workpiece coordinate position
18: Tool axis movement
19: Tip machine position
20: Relative position
21: Table coordinate position
22: Workpiece installation position
23: Inclined surface coordinate position

---Setting range---

1 to 27

#8906 Counter type 6

Not used. Set to "0".

---Setting range---

1 to 27
### #8910 Edit undo

Set whether to enable the Undo function during program edit on the Monitor screen or Edit screen.

- 0: Disable
- 1: Enable

(Note) This parameter is valid for M800W/M800S Series.

### #8913 Touch panel sense

Not used.

### #8914 Auto Top search

Select the operation method for restart search type 2.

- 0: It is necessary to set the top search position arbitrarily.
- 1: The restart search is executed from O No. that is designated as head.

### #8920 3D tool ofs select

Not used.

### #8921 Mass Edit select

Not used.

### #8922 T-reg-dup check

Set whether to enable the duplication check in registering tools to magazine pots, and in setting tool Nos. for spindle/standby.

- 0: Duplication check valid for all valid magazines
- 1: Duplication check invalid
- 2: Duplication check valid only for the selected magazine

### (PR) #8923 Hide Edit-IO menu

Set whether to enable the edit-in/out menu.

When disabled, the edit-input/output menu won't appear. However, the maintenance-in/out menu is always enabled regardless of this parameter setting.

- 0: Enable
- 1: Disable

### #8924 Meas. confirm msg

Select whether to display a confirming message when attempting to write compensation data for tool measurement, or coordinate system data for workpiece measurement.

However, the confirmation message will not appear in L system tool measurement simple mode "#8957 T meas (L)-Simple".

- 0: Not display a confirming message
- 1: Display a confirming message

### #8925 SP on 1st part sys

Select which spindle to display in the 1st part system window for the 2-, 3- or 4-part system simultaneous display.

(Note 1) If you select "00" for the 2-, 3- or 4-part system simultaneous display, the default display is used (1st spindle on the upper side and 2nd spindle on the lower side).

(Note 2) If you set the same number as, or a greater number than the setting of "#1039 spinno", or if the high- or low-order setting is "0", the 1st spindle is displayed.

(Note 3) If you set the low-order to F, the screen shows the actual rotation speed, command speed and load meter of the high-order spindle. Note that for the 4-counter display in 4-part system simultaneous display, even if the low-order is not F, the screen shows the actual rotation speed, command speed and load meter of the high-order and low-order spindles.

(Note 4) 3- or 4-part system simultaneous display is not available.

---Setting range---

- High-order (Select an upper side spindle.) : 0 to 8
- Low-order (Select a lower side spindle.) : 0 to 8, F

---
15 User Parameters

--- Setting range ---
High-order (Select an upper side spindle.) : 0 to 8
Low-order (Select a lower side spindle.) : 0 to 8, F

--- Setting range ---
High-order (Select an upper side spindle.) : 0 to 8
Low-order (Select a lower side spindle.) : 0 to 8, F

--- Setting range ---
High-order (Select an upper side spindle.) : 0 to 8
Low-order (Select a lower side spindle.) : 0 to 8, F

Disable [=[INPUT] menu for tool compensation and workpiece coordinate offset values. Fix the setting method to the incremental value input.
0: Enable
1: Disable
C80 Series Alarm/Parameter Manual

15 User Parameters

---

#8930 Disable=INPUT:var

Disable [=INPUT] menu for common variables.

0: Enable
1: Disable

#8931 Display/Set limit

Select the restriction of the connected NC’s screen display/settings on/from the remote control tool (NC Monitor2).

0: Permit the screen display/settings
1: Permit the screen display only
2: Restrict the connection

(PR) #8932 Hide measure scrn

Select whether to display the tool measurement screen and workpiece measurement screen.

0: Display
1: Not display

(Note) If the "#11056 Workpiece coordinate system shift OFF" is "0" for the L system, the screen is displayed as the workpiece coordinate system shift screen even when this parameter is set to "1".

#8933 Disable lnght comp

Set whether to disable the setting of tool shape compensation amount.

0: Enable the setting
1: Disable the setting

The shape compensation amount covers the following data according to the tool compensation type.

• Compensation type I ("1" in "#1037 cmdtyp(command type)"
  ... Compensation amount (the sum of shape compensation and wear compensation amount)
• Compensation type II ("2" in "#1037 cmdtyp(command type)"
  ... Length dimension and radius dimension
• Compensation type III ("3" in "#1037 cmdtyp(command type)"
  ... Tool length and tool nose R

#8934 Disable wear comp

Select whether to disable the setting of tool wear compensation amount.

0: Enable the setting
1: Disable the setting

The wear compensation amount covers the following data according to the tool compensation type.

• Compensation type I ("1" in "#1037 cmdtyp(command type)"
  ... This parameter is disabled.
• Compensation type II ("2" in "#1037 cmdtyp(command type)"
  ... Length wear and radius wear
• Compensation type III ("3" in "#1037 cmdtyp(command type)"
  ... Tool wear and tool nose wear

#8935 W COORD CONFIRM

Select whether to display confirmation message when setting workpiece coordinate system offset in [Easy setting] menu.

0: Not display
1: Display

#8936 Delete leading 0

In creating a file, or in transferring a file, if the file name of the new file, or the file name of the transfer destination consists only of numerical figures, 0 of the file name head will be deleted from the name.

0: Designated file name (0 remains in the file name)
1: 0 will be deleted from the file name

#8937 File sort volume

Not used.
### #8938 Edit-Not show Prg
Select whether to enable the automatic display on the Edit screen, when selected, of the programs searched by operation/check search or the MDI programs in MDI mode.
- 0: Enable the automatic display
- 1: Disable the automatic display

### #8939 Undo confirm msg
Display a confirming message when operating the [Undo] menu.
- 0: Not display a confirming message
- 1: Display a confirming message

### #8940 Set select display
Select what to display in the selectable display area.
- 0: Common variable
- 1: Local variable
- 2: Workpiece coordinate system offset
- 3: All spindles' rotation speed
- 4: Expanded counters
- 5: Tool center coordinate display
- 6: Tool compensation amount

(Note1) Tool center coordinate display is available only when any of the 5-axis related options is enabled.

### (PR) #8941 ABS/INC for T-ofs
Enable switching the method to set tool compensation data (absolute/incremental value) with INPUT key.
- 0: Fix it to the absolute value input.
- 1: Enable to switch between absolute and incremental value input.

### (PR) #8942 $1 color
Set the color to be shown on the top-left of screen and window title for the 1st part system. This enables switching the color patterns for each part system.

When set to the values "1" to "8", the part system name is shown in the form of button image.
When set to "0", the settings between #8943 (#8962) and #8945 (#8965) is disabled and the screen is shown by the default color pattern for all the part systems.

(Note) When set to "0" or "1", the color is determined by the setting of "#11060 Screen theme color".
- 0: Theme color (no button image) (default)
- 1: Theme color
- 2: Pink
- 3: Light blue
- 4: Orange
- 5: Green
- 6: Fuchsia
- 7: YellowGreen
- 8: Brown
15 User Parameters

---

**Set the color to be shown on the top-left of screen and window title for the 2nd part system. This enables switching the color patterns for each part system.**

When set to the values "1" to "8", the part system name is shown in the form of button image.

(Note 1) Enabled when "#8942 $1 color" is set to the values "1" to "8".

(Note 2) When set to "1", the color is determined by the setting of "#11060 Screen theme color".

1. Theme color (default)
2. Pink
3. Light blue
4. Orange
5. Green
6. Fuchsia
7. YellowGreen
8. Brown

---

**Set the color to be shown on the top-left of screen and window title for the 3rd part system. This enables switching the color patterns for each part system.**

When set to the values "1" to "8", the part system name is shown in the form of button image.

(Note 1) Enabled when "#8942 $1 color" is set to the values "1" to "8".

(Note 2) When set to "1", the color is determined by the setting of "#11060 Screen theme color".

1. Theme color (default)
2. Pink
3. Light blue
4. Orange
5. Green
6. Fuchsia
7. YellowGreen
8. Brown

---

**Set the color to be shown on the top-left of screen and window title for the 4th part system. This enables switching the color patterns for each part system.**

When set to the values "1" to "8", the part system name is shown in the form of button image.

(Note 1) Enabled when "#8942 $1 color" is set to the values "1" to "8".

(Note 2) When set to "1", the color is determined by the setting of "#11060 Screen theme color".

1. Theme color (default)
2. Pink
3. Light blue
4. Orange
5. Green
6. Fuchsia
7. YellowGreen
8. Brown

---

**Edit-win $ switch**

Select whether to enable switching of program displayed in the edit window on Monitor screen according to the displayed part system when part system switch is performed.

0: Not switch
1: Switch
Select how to switch the part system to display when the 2-, 3- or 4-part system simultaneous display is enabled.

0: The No. of part system to display is incremented by one. The operation target is switched when the part system displayed in the non-active area is selected.

2: The operation target on the left side is fixed to $1. When $1 is selected for the part system switch, the left side is the operation target. When $2 or after is selected, the displayed part system on the right side is incremented by one.

(Note) 3- or 4-part system simultaneous display is not available.

---Setting range---

High-order (Select an upper side spindle.) : 0 to 8
Low-order (Select a lower side spindle.) : 0 to 8, F

---Setting range---

High-order (Select an upper side spindle.) : 0 to 8
Low-order (Select a lower side spindle.) : 0 to 8, F
Select which spindle to display in the 7th part system window for the 2-, 3- or 4-part system simultaneous display.  
(Note 1) If you select "00" for the 2-, 3- or 4-part system simultaneous display, the default display is used (1st spindle on the upper side and 2nd spindle on the lower side).  
(Note 2) If you set the same number as, or a greater number than the setting of "#1039 spinno", or if the high- or low-order setting is "0", the 1st spindle is displayed.  
(Note 3) If you set the low-order to F, the screen shows the actual rotation speed, command speed and load meter of the high-order spindle.  
Note that for the 4-counter display in 4-part system simultaneous display, even if the low-order is not F, the screen shows the actual rotation speed, command speed and load meter of the high-order and low-order spindles.  
(Note 4) 3- or 4-part system simultaneous display is not available.

---Setting range---

High-order (Select an upper side spindle.) : 0 to 8  
Low-order (Select a lower side spindle.) : 0 to 8, F

15.11 Machining Condition Selection Parameters

(Note) The machining condition parameter groups which can be set through the machining condition setting screen are stored according to the application. The guidance display and parameter input/output on the screen follow the machining condition parameter numbers in the following table. These parameters can only be set through the machining condition setting screen.

**Set the filter time constant for smoothly changing the acceleration rate in pre-interpolation acceleration/deceleration.**

This will be disabled when "0" or "1" is set.

- **Notch frequency Hz**
  Displays the notch frequency (Hz) for the S-shape filter set in 
  "#1570 Sfilt2" (Soft acceleration/deceleration filter 2).

---Setting range---

0 to 200 (ms)

**#2010 fwd_g Feed forward gain**

Set a feed forward gain for pre-interpolation acceleration/deceleration.

The larger the set value, the smaller the theoretical control error will be. However, if a machine vibration occurs, set the smaller value.

---Setting range---

0 to 200 (%)
Set a compensation coefficient for reducing a control error in the reduction of a corner roundness and arc radius.

The larger the set value is, the smaller the theoretical error will be. However, since the speed at the corner goes down, the cycle time will be extended.

Coefficient = 100 - setting value

(Note) This function will be enabled when "#8021 COMP_CHANGE" is set to "0".

---Setting range---

0 to 99 (%)

**Theoretical radius decrease error amount**

Displays the theoretical radius decrease error amount, $\Delta R$(mm), from the automatic calculation by NC.

![Diagram of theoretical radius decrease error amount](image)

**Theoretical radius decrease amount in arc**

**R5mm arc deceleration speed**

Displays a deceleration speed (mm/min) along an arc of 5 (mm) radius.

**R1mm arc deceleration speed**

Displays a deceleration speed(mm/min) along an arc of 1 (mm) radius.
#8020 DCC ANGLE

Set the minimum value of an angle (external angle) that should be assumed to be a corner. When an inter-block angle (external angle) in high-accuracy mode is larger than the set value, it will be determined as a corner and the speed will go down to sharpen the edge.

If the set value is smaller than θ, the speed goes down to optimize the corner.

(Note) If "0" is set, it will be handled as "5" degrees.

---Setting range---
0 to 89 (°)
0: 5 degree (Equals to setting "5")

Theoretical corner dull amount
Displays the corner dull amount Δc(mm) in respect to the corner's angle (external angle) θ(°).

\[ \Delta c = \text{ca(mm)} + \Delta \text{cs(mm)} \]

Path after servo control

\[ \text{Path after soft acceleration/deceleration 2} \]

Theoretical roundness amount at corner

ca(mm): Error (Δ) caused by the soft acceleration/deceleration 2
\( \Delta \text{cs(mm)} \): Error (Δ) caused by the servo system

Corner deceleration speed
Display corner deceleration speed c (mm/min) for the corner of the angle (external angle) with θ(°).

Theoretical dull amount at 90 degree
Display corner dull amount when the angle is 90 degree.

Corner deceleration speed at 90 degree
Display corner deceleration speed when the angle is 90 degree.

#8021 COMP_CHANGE
Select whether to share or separate the compensation coefficient at the corner/curve during the high-accuracy control mode.
0: Share ("#8019 R COMP" is applied.)
1: Separate
* Corner: #8022 CORNER COMP
* Curve: #8023 CURVE COMP
(Note) Set "1" when using SSS/EasySSS control.
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Setting Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>#8022 CORNER COMP</td>
<td>Set the compensation coefficient to further reduce or increase the roundness at the corner during the high-accuracy control mode. Coefficient = 100 - setting value</td>
<td>-1000 to 99 (%)</td>
</tr>
<tr>
<td>#8023 CURVE COMP</td>
<td>Set the compensation coefficient to further reduce or increase the radius reduction amount at the curve (arc, involute, spline) during the high-accuracy control mode. Coefficient = 100 - setting value</td>
<td>-1000 to 99 (%)</td>
</tr>
<tr>
<td>#8025 SPLINE ON</td>
<td>Specify whether to enable the fine spline function. 0: Disable the fine spline function. 1: Enable the fine spline function. Spline interpolation will be valid during G61.2 modal regardless of this setting.</td>
<td></td>
</tr>
<tr>
<td>#8026 CANCEL ANG. (for M system only)</td>
<td>Set the angle where the spline interpolation is temporarily canceled. When the angle made by blocks exceeds this parameter setting value, spline interpolation will be canceled temporarily. In consideration of the pick feed, set a value a little smaller than the pick feed angle.</td>
<td>0 to 180 (°)</td>
</tr>
<tr>
<td>#8027 Toler-1 (for M system only)</td>
<td>Set the maximum chord error (tolerance) in a block that includes an inflection point. Set the tolerance applicable when the applicable block is developed to fine segments by CAM. (normally about 10 μm) When &quot;0.000&quot; is set, the applicable block will be linear.</td>
<td>0.000 to 100.000 (mm)</td>
</tr>
<tr>
<td>#8028 Toler-2 (for M system only)</td>
<td>Set the maximum chord error (tolerance) in a block that includes no inflection point. Set the tolerance applicable when the applicable block is developed to fine segments by CAM. (normally about 10 μm) When &quot;0.000&quot; is set, the applicable block will be linear.</td>
<td>0.000 to 100.000 (mm)</td>
</tr>
<tr>
<td>#8029 FairingL (for M system only)</td>
<td>Set the length of the block subject to fairing. (Enabled when &quot;#8033 Fairing ON&quot; is set to &quot;1&quot;).</td>
<td>0 to 100.000 (mm)</td>
</tr>
</tbody>
</table>
#8030  MINUTE LENGS (for M system only)
Set the fine-segment length where the spline interpolation is temporarily canceled.
When the length of one block exceeds this parameter setting value, spline interpolation is canceled tempo-
rrarily and linear interpolation is performed. Set a value a little smaller than one block length of the program.
If "-1" is set, spline interpolation will be performed regardless of block length.
---Setting range---
-1 to 127 (mm)
0: 1 (mm)

#8033  Fairing ON (for M system only)
Select whether or not to use the fairing or smooth fairing function.
0: Use neither of them
1: Use the fairing function
2: Use the smooth fairing function

#8037  CorJudgeL (for M system only)
Set the length of the block to be excluded when deciding a corner.
(Enabled when "#8036 CordecJudge" is set to "1".)
---Setting range---
0 to 99999.999 (mm)

#8090  SSS ON (for M system only)
Set whether to enable the SSS control with G05 P10000.
0: Disable
1: Enable

#8091  StdLength (for M system only)
Set the maximum value of the range for recognizing the shape.
To eliminate the effect of steps or errors, etc., set a large value. To enable sufficient deceleration, set a small
value.
If "0.000" is set, the standard value (1.000mm) will be applied.
---Setting range---
0 to 100.000 (mm)

#8093  StepLeng (for M system only)
Set the width of the step at which the speed is not to be decelerated. (Approximately the same as the CAM
path difference [Tolerance].)
If "0" is set, the standard value (5μm) will be applied.
If a minus value is set, the speed will decelerate at all minute steps.
---Setting range---
-1.000 to 0.100 (mm)

#42001  P1-G1btL  Time constant for machining condition selection I
Time constant for machining condition selection I
Set the time constant for the machining condition selection I function. This is equivalent to the parameter
"#1207 G1btL".
---Setting range---
Without high-accuracy control time constant expansion: 0 to 5000 (ms)
With high-accuracy control time constant expansion: 0 to 30000 (ms)

#42002  P1-SfiltG1  G01soft acceleration/deceleration filter for machining
condition selection I
G01soft acceleration/deceleration filter for machining condition selection I
Set the G01 soft acceleration/deceleration filter's time constant for the machining condition selection I func-
tion. This is equivalent to the parameter "#1568 SfiltG1".
---Setting range---
0 to 200 (ms)
### #42003 P1-Sfilt2

Soft acceleration/deceleration filter 2 for machining condition selection I

Set the soft acceleration/deceleration filter 2's time constant for the machining condition selection I function. This is equivalent to the parameter "#1570 Sfilt2".

---Setting range---

0 to 50 (ms)

### #42004 P1-rcomp

Accuracy coefficient for machining condition selection I

Set the accuracy coefficient for the machining condition selection I function. This is equivalent to the parameter "#8019 R COMP".

* This setting is enabled when "#8021 COMP_CHANGE" is set to "0".

---Setting range---

0 to 99 (%)

### #42005 P1-cor_comp

Corner accuracy coefficient for machining condition selection I

Set the corner accuracy coefficient for the machining condition selection I function. This is equivalent to the parameter "#8022 CORNER COMP".

* This setting is enabled when "#8021 COMP_CHANGE" is set to "1".

---Setting range---

-1000 to 99 (%)

### #42006 P1-cur_comp

Curve accuracy coefficient for machining condition selection I

Set the curve accuracy coefficient for the machining condition selection I function. This is equivalent to the parameter "#8023 CURVE COMP".

* This setting is enabled when "#8021 COMP_CHANGE" is set to "1".

---Setting range---

-1000 to 99 (%)

### #42007 P1-fwd_g

Feed forward gain for machining condition selection I

Set the feed forward gain for the machining condition selection I function. This is equivalent to the parameter "#2010 fwd_g".

---Setting range---

0 to 200 (%)

### #42008 P1-fcorn

Corner deceleration angle for machining condition selection I

Set the corner deceleration angle for the machining condition selection I function. This is equivalent to the parameter "#8020 DCC ANGLE".

---Setting range---

0 to 89 (°)

### #42009 P1-spcanag

Cancel angle for machining condition selection I

Set the cancel angle for the machining condition selection I function. This is equivalent to the parameter "#8026 CANCEL ANG".

---Setting range---

0 to 180 (°)

### 15.12 Menu Selection Parameters

<table>
<thead>
<tr>
<th>(PR)</th>
<th>#10501-10530</th>
<th>Monitr main menu 1 to 30</th>
</tr>
</thead>
</table>

Select the menu Nos. to be displayed on Monitor screen's main menus. Set the menu No. (numbered in the initial order) which you wish to set first from the left of Monitor's main menus in #10501, second in the next parameter and likewise afterwards.

(E.g.) When you set the parameter #10501 to 11, the menu initially displayed at the left end of Monitor main menu's 2nd page is displayed at the left end of the 1st page.

(Note) If you set the No. of menu which is not displayed in the initial state (without setting the menu selection parameters), the menu won't be displayed after this parameter setting.

The menu position of each parameter and the menu when "0" is set are as follows.

- #10501: First from left in the page 1 (when "0" is set: Search)
- #10502: Second from left in the page 1 (when "0" is set: Research)
- #10503: Third from left in the page 1 (when "0" is set: Edit)
- #10504: Fourth from left in the page 1 (when "0" is set: Not display)
- #10505: Fifth from left in the page 1 (when "0" is set: Not display)
- #10506: Sixth from left in the page 1 (when "0" is set: Offset)
- #10507: Seventh from left in the page 1 (when "0" is set: Coord)

Select the menu Nos. to be displayed on Setup screen’s main menus.

Set the menu No. (numbered in the initial order) which you wish to set first from the left of Setup’s main menus in #10551, second in the next parameter and likewise afterwards.

(E.g.) When you set the parameter #10551 to 11, the menu initially displayed at the left end of Setup main menu's 2nd page is displayed at the left end of the 1st page.

(Note) If you set the No. of menu which is not displayed in the initial state (without setting the menu selection parameters), the menu won't be displayed after this parameter setting.

The menu position of each parameter and the menu when "0" is set are as follows.

<table>
<thead>
<tr>
<th>Parameter No. (PR)</th>
<th>Menu Position</th>
</tr>
</thead>
<tbody>

Select the menu Nos. to be displayed on Edit screen's main menus.

Set the menu No. (numbered in the initial order) which you wish to set first from the left of Edit's main menus in #10601, second in the next parameter and likewise afterwards.

(E.g.) When you set the parameter #10601 to 11, the menu initially displayed at the left end of Edit main menu's 2nd page is displayed at the left end of the 1st page.

(Note) If you set the No. of menu which is not displayed in the initial state (without setting the menu selection parameters), the menu won't be displayed after this parameter setting.

The menu position of each parameter and the menu when "0" is set are as follows.

- #10601: First from left in the page 1 (when "0" is set: Edit)
- #10602: Second from left in the page 1 (when "0" is set: Not display)
- #10603: Third from left in the page 1 (when "0" is set: Not display)
- #10604: Fourth from left in the page 1 (when "0" is set: Not display)
- #10605: Fifth from left in the page 1 (when "0" is set: I/O)
- #10606: Sixth from left in the page 1 (when "0" is set: Not display)
- #10607: Seventh from left in the page 1 (when "0" is set: Not display)
- #10608: Eighth from left in the page 1 (when "0" is set: Not display)
- #10609: Ninth from left in the page 1 (when "0" is set: Not display)
- #10610: Tenth from left in the page 1 (when "0" is set: Not display)
- #10611: First from left in the page 2 (when "0" is set: Not display)

</tbody>
</table>

There are some items in the specifications that can be used or cannot be used according to the value set in this parameter.
The file structure may also change depending on the compensation data type.
(Note) When this parameter is changed, the file system will be changed after the power is turned ON.
So always execute format.
The new format will be enabled after turning the power ON again.
Setting order
1) cmdtyp changeover -> 2) Turn power ON again -> 3) Format -> 4) Turn power ON again
(Note) Compensation type III can be selected for M system by setting #1046.

---Setting range---

</tr>
</tbody>
</table>
Select the command method for the absolute and incremental commands. The absolute command/incremental command can be issued by using the absolute command address and incremental command address for the same axis.

0: Use G command for the absolute and incremental commands.
1: Use axis name for the absolute and incremental commands.
(The axis name in "#1013 axname" will be the absolute command, "#1014 incax" will be the incremental command.)

Select whether to apply dry run (feed at manual setting speed instead of command feedrate) to the G00 command.

0: Not apply to G00. (move at rapid traverse rate)
1: Apply to G00. (move at manual setting speed)

Select the G00 travel path type.

0: Move linearly toward the end point. (interpolation type)
1: Move to the end point of each axis at the rapid traverse feedrate for each axis. (non-interpolation)
(Note) If this parameter is set to "1", neither of the following functions will be available: rapid traverse constant-gradient acceleration/deceleration and rapid traverse constant-gradient multi-step acceleration/deceleration.

Select the user macro interrupt with the substitute M code.

0: Disable substitute M code
1: Enable substitute M code

Set an M code to replace M96 when "#1109 subs_M" is set to "1".

---Setting range---
3 to 97 (excluding 30)

Specify an M code to replace M97 when "#1109 subs_M" is set to "1".

---Setting range---
3 to 97 (excluding 30)

Select the modal state at power ON from among the following: high-accuracy control mode, high-speed high-accuracy control I mode, high-speed high-accuracy control II mode or high-speed high-accuracy control III mode.

0: G08P0/G64 (cutting) mode
1: G08P1/G61.1 (high-accuracy control) mode
2: G05.1Q1 (high-speed high-accuracy control I) mode
3: G05P10000 (high-speed high-accuracy control II) mode
4: G05P20000 (high-speed high-accuracy control III) mode

Select whether to initialize (power ON state) the modals by resetting.

0: Not initialize modal state
1: Initialize modal state
### Part System Name

Set the name of each part system. This must be set only when using multi-part system. This name will be displayed on the screen only when the part systems must be identified. Use 4 or less characters consisting of both alphabets and numbers.

---Setting range---

4 or less characters consisting of both alphabets and numbers

<table>
<thead>
<tr>
<th>#1169</th>
<th>part system name</th>
<th>Part system name</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### M2 Name

Set this address code when using the 2nd miscellaneous command. Set an address with A, B or C that is not used for "#1013 axname* or "#1014 incax".

---Setting range---

A, B, C

<table>
<thead>
<tr>
<th>#1170</th>
<th>M2name</th>
<th>Second miscellaneous code</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Tap Return Override

Set the tap return override value for the synchronous tapping. When "0" is set, it will be regarded as 100%.

---Setting range---

0 to 100 (%)

<table>
<thead>
<tr>
<th>#1171</th>
<th>taprov</th>
<th>Tap return override</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Tap Return Override

Set the override value when leaving the tap end point in the synchronous tapping cycle. When "0" is set, it will be regarded as 100%.

---Setting range---

0 to 999 (%)

<table>

| 1: Enable inclined axis control  

| (PR) #1191 s_angl | Inclination angle (for L system only)  
|-------------------|---------------------------------------|
| Set the inclination angle (θ).  
(Note) When set to "0", the angle determined by three-side setting will be applied.  
---**Setting range---**  
-80.000 to 80.000 (°)

| (PR) #1192 s_zrmv | Compensation at reference position return (for L system only)  
|-------------------|---------------------------------------------------------------|
| Select whether to perform compensation for the basic axis corresponding to the inclined axis at reference position return.  
| 0: Perform compensation  
| 1: Not perform compensation  

| #1193 inpos | Deceleration check method 1  
|-------------|-------------------------------|
| The setting is selected with the parameter "#1306 InpsTyp".  
| 0: Deceleration check method 1  
| Select the deceleration check method for G0.  
| 0: Command deceleration check  
| 1: In-position check  
| 2: Smoothing check  
| 1: Validate in-position check  
| Specify the deceleration confirmation method for the positioning or cutting command.  
| 0: G0, G1+G9 Command deceleration check  
| 1: G0, G1+G9 In-position check  
| 2: G0, G1+G9 Smoothing check  

---
Select the time constant for manual handle feed.

0: Use time constant for G01
1: Time constant 0 (step)

Select whether to enable or disable M command macro call of user macro.

0: Disable
1: Enable

Select whether to enable or disable S command macro call of user macro.

0: Disable
1: Enable

Select whether to enable a call of user macro using command T.

0: Disable macro call
1: Enable macro call, irrespective of the number of command T digits
2: Enable macro call when a tool No. (excluding 0) is given to the upper digit of command T
3: Enable macro call when a tool No. (including 0) is given to the upper digit of command T.

Select whether to enable or disable 2nd miscellaneous command macro call of user macro.

0: Disable
1: Enable

Select the initial condition of spindle control after power is turned ON.

0: 1st spindle control mode (G43.1)
1: 2nd spindle control mode (G44.1)
2: All spindle simultaneously control mode (G47.1)

(Note) While G43.1 or G44.1 command is given, the spindle No. is selected with "#12090 SnG43.1" or "#1534 SnG44.1".

Select the acceleration and deceleration type when a rapid traverse command is issued.

0: Acceleration and deceleration with constant time (conventional type)
1: Acceleration and deceleration with a constant angle of inclination

(Note) When rapid traverse constant-gradient multi-step acceleration/deceleration is valid, this parameter will be invalid.

Select the acceleration and deceleration type when a linear interpolation command is issued.

0: Acceleration and deceleration with constant time (conventional type)
1: Acceleration and deceleration with a constant angle of inclination

Set the distance between tools (edges) (between facing turrets).

---Setting range---
0 to 99999.999 (mm)

Select the turrets, which correspond to the tool Nos. 1 to 32, as facing turrets for T code mirror image.

---Setting range---
0 to FFFFFFFF
Select the turrets, which correspond to the tool Nos. 33 to 64, as facing turrets for T code mirror image.

---Setting range---
0 to FFFFFFFF

#1205 G0bdcc Acceleration and deceleration before G00 interpolation

0: Post-interpolation acceleration/deceleration is applied to G00.
1: Pre-interpolation acceleration/deceleration is applied to G00 even in the high accuracy control mode.
2: Rapid traverse constant-gradient multi-step acceleration/deceleration is enabled.

When the multi-part system simultaneous high-accuracy control option is enabled, "1" can be set for the 2nd part system and the following.

#1208 RCK Arc radius error compensation factor

Set a coefficient for arc radius error compensation.
An arc radius error compensation amount can be increased or decreased between -60.0 and +20.0%.

---Setting range---
-60.0 to +20.0 (%)

#1209 cirdcc Arc deceleration speed

Set the deceleration speed at the arc entrance or exit.

---Setting range---
1 to 999999 (mm/min)
Select whether to initialize G code group modals and H and D codes, which corresponds to bits as follows, when the system is reset.

0: Initialize.
1: Not initialize.

<Description of bits for M system>

Set the length within the orthogonal coordinate of the inclined axis, a side of the triangle formed with the inclination angle.

---Setting range---
-9999.999 to 9999.999

Set the actual length of the basic axis corresponding to the inclined axis, a side of the triangle formed with the inclination angle.

---Setting range---
-9999.999 to 9999.999

Set the actual length of the inclined axis, a side of the triangle formed with the inclination angle.

---Setting range---
-9999.999 to 9999.999

---Setting range---
1 to 999999 (mm/min)

Specify the number of the rotational tool axis (servo axis) used for polygon machining (G51.2).
Set "0" when not using polygon machining (spindle-servo axis), or when using spindle-spindle polygon machining.
A value exceeding the base specification parameter "#1002 axisno" cannot be specified.
This parameter is valid when the G code system is 6 or 7 ("7" or "8" is set in the parameter "#1037 cmdtyp").

---Setting range---
0 to controlled axis number

Select whether to perform a deceleration check when the travel direction is changed from G1 to G0.
0: Not perform
1: Perform

Select whether to perform a deceleration check when the travel direction is changed from G1 to G1.
0: Not perform
1: Perform

Select whether the check is carried out at the specified position in manual second reference position return mode upon completion of spindle orientation or at second reference position return interlock signal.
0: Upon completion of spindle orientation
1: At second reference position return interlock signal

Set the maximum value up to which the F 1-digit feedrate can be changed.

---Setting range---
0 to 1000000 (mm/min)

Set the constant that determines the speed change rate per manual handle graduation in F 1-digit feedrate change mode.

---Setting range---
0 to 32767

---Setting range---
0 to 32767

---Setting range---

</table>
**#1518 polm**  
**Spindle-spindle polygon Workpiece spindle No.**

Set the spindle No. or spindle name of workpiece axis used in spindle-spindle polygon machining.

(Note 1) The 1st spindle will be selected when "0" is set.

(Note 2) There are 2 spindle designation methods: spindle No. method and spindle name method. When the name (1 to 9) is set to the spindle name parameter(#3077 Sname) for all the spindles, the commands are issued with for each spindle name, other than that, the commands are issued with the spindle number.

---Setting range---

0 to 9

---#1519 pols---

**Spindle-spindle polygon Tool spindle No.**

Set the spindle number or spindle name of the rotary tool axis used in spindle-spindle polygon machining.

(Note 1) The 2nd spindle will be selected when "0" is set.

(Note 2) There are 2 spindle designation methods: spindle No. method and spindle name method. When the name (1 to 9) is set to the spindle name parameter(#3077 Sname) for all the spindles, the commands are issued with for each spindle name, other than that, the commands are issued with the spindle number.

---Setting range---

0 to 9

---#1520 Tchg34---

**Additional axis tool compensation operation (for L system only)**

Select axis to carry out the additional axis’ tool compensation function.

0: 3rd axis.
1: 4th axis.

---#1521 C_min---

**Minimum turning angle**

Set the minimum turning angle of the normal line control axis at the block joint during normal line control.

---Setting range---

0.000 to 360.000 (°) (Input setting increment applies)

---#1522 C_axis---

**Normal line control axis**

Set the number of the axis for normal line control.

Set a rotary axis No.

0: Normal line control disabled
1 to 16: Axis No. (number of control axes)

---#1523 C_feed---

**Normal line control axis turning speed**

Set the turning speed of the normal line control axis at the block joint during normal line control.

Set a value that does not exceed the normal line control axis’ clamp speed (#2002 clamp”).

This is enabled during the normal line control type I.

---Setting range---

0 to 100000 (°/min)

---#1524 C_type---

**Normal line control type**

Select the normal line control type.

0: Normal line control type I
1: Normal line control type II

---#1533 millPax---

**Pole coordinate linear axis name**

Set the linear axis name used for pole coordinate interpolation.

---Setting range---

Axis names such as X, Y or Z
Specify which spindle to be selected when G44.1 is commanded.

<Spindle No. type>
Specify by the spindle No. 1 to 8.
The 2nd spindle is selected if you specify a nonexistent spindle No.

<Spindle name type>
Specify by the spindle name 1 to 9.
The 2nd spindle is selected if you specify a nonexistent spindle name.

(Note) If names (1 to 9) have been set in the spindle name parameter "#3077 Sname" for all spindles, <Spindle name type> is used.

---Setting range---
0 to 9

#1535 C_leng Minimum turning movement amount
Set the minimum turning movement amount of the normal line control axis at the block joint during normal line control.

---Setting range---
0.000 to 99999.999 (mm) (Input setting increment applies)

#1537 crsax[1] Mixed control (cross axis control) axis
Set the axis to be interchanged during the mixed control (cross axis control).
Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range---
Two digits between A to Z and 1 to 9
(Setting is cleared when "0" is set)

#1538 crsax[2] Mixed control (cross axis control) axis
Set the axis to be interchanged during the mixed control (cross axis control).
Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range---
Two digits between A to Z and 1 to 9
(Setting is cleared when "0" is set)

#1539 crsax[3] Mixed control (cross axis control) axis
Set the axis to be interchanged during the mixed control (cross axis control).
Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range---
Two digits between A to Z and 1 to 9
(Setting is cleared when "0" is set)

#1540 crsax[4] Mixed control (cross axis control) axis
Set the axis to be interchanged during the mixed control (cross axis control).
Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range---
Two digits between A to Z and 1 to 9
(Setting is cleared when "0" is set)
### #1541 crsax[5] Mixed control (cross axis control) axis

Set the axis to be interchanged during the mixed control (cross axis control).
Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range---
Two digits between A to Z and 1 to 9
(Setting is cleared when "0" is set)

### #1542 crsax[6] Mixed control (cross axis control) axis

Set the axis to be interchanged during the mixed control (cross axis control).
Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range---
Two digits between A to Z and 1 to 9
(Setting is cleared when "0" is set)

### #1543 crsax[7] Mixed control (cross axis control) axis

Set the axis to be interchanged during the mixed control (cross axis control).
Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range---
Two digits between A to Z and 1 to 9
(Setting is cleared when "0" is set)

### #1544 crsax[8] Mixed control (cross axis control) axis

Set the axis to be interchanged during the mixed control (cross axis control).
Using two digits, set the name of the axis to be interchanged with the axis in the part system where the mixed control (cross axis control) request signal is input, or the name of the axis to be shifted to that part system.

---Setting range---
Two digits between A to Z and 1 to 9
(Setting is cleared when "0" is set)

### #1558 IvOMin Involute interpolation override lower limit value

Not used.

### #1559 IvAMax Involute interpolation allowable acceleration speed

Not used.

### #1560 IvFMin Involute interpolation minimum feedrate

Not used.

### #1561 3Dcdc Switch workpiece coordinate display during 3D coordinate conversion

The workpiece coordinate display during 3D coordinate conversion is switched to the workpiece coordinate system or G68 program coordinate system.
0: Workpiece coordinate system
1: G68 program coordinate system
(Note) The special display unit's absolute coordinates also follow this parameter setting.

### #1562 3Dremc Switch remaining command display during 3D coordinate conversion

The remaining command display during 3D coordinate conversion is switched to the workpiece coordinate system or G68 program coordinate system.
0: Workpiece coordinate system
1: G68 program coordinate system
### #1563 3Dcdrc
Switch coordinate reading during 3D coordinate conversion

The coordinate system of the workpiece/skip coordinate read value in the 3D coordinate conversion modal is switched.

- 0: G68 program coordinate system
- 1: Workpiece (local) coordinate system

### #1564 3Dspd
Hole drilling speed during 3D coordinate conversion

Set the rapid traverse rate for the hole drilling cycle during 3D coordinate conversion.

- 0: The cutting feed clamp speed is used.
  - Other than 0: The set speed is used.
  
  Note that if the rapid traverse rate is exceeded, the speed will be clamped at the rapid traverse rate.

---Setting range---

0 to 1000000 mm/min

### #1565 helgear
Helical machining base axis

Set the base axis for helix angle calculation in helical machining. When no setting, Z axis will be used.

---Setting range---

Axis name such as X, Y, Z, U, V, W, A, B, and C

### #1566 3DSelctDrillaxMode
Switch drill axis's mode from rapid traverse during 3D coordinate conversion

Switch the rapid traverse mode in non-drilling blocks among a drilling cycle to the cutting feed mode during 3-dimensional coordinate conversion.

- 0: Rapid traverse mode. The speed follows the setting of "#2001 rapid".
  - 1: Cutting feed mode. The speed follows the setting of "#1564 3Dspd".

### #1569 SfiltG0
G00 soft acceleration/deceleration filter

Set the filter time constant for smoothly changing the acceleration rate for the rapid traverse acceleration/deceleration in pre-interpolation acceleration/deceleration.

---Setting range---

0 to 200 (ms)

### #1570 Sfilt2
Soft acceleration/deceleration filter 2

Set the filter time constant for smoothly changing the acceleration rate in pre-interpolation acceleration/deceleration.

- This will be disabled when "0" or "1" is set.
  - Notch frequency Hz
  
  Displays the notch frequency (Hz) for the S-shape filter set in "#1570 Sfilt2" (Soft acceleration/deceleration filter 2).

---Setting range---

0 to 200 (ms)

### #1571 SSSdis
SSS control adjustment coefficient fixed value selection

Fix the shape recognition range for SSS control.

---Setting range---

0/1
This eliminates speed fluctuations at the joint of the arc and straight line and arc and arc.
Set as a bit unit.
0: Do not overlap the arc command blocks
1: Overlap the arc command blocks

- **bit0:** Arc command during high-speed high-accuracy control II
- **bit1:** Arc command during high-speed machining mode II
- **bit2:** Arc command during high-accuracy control (G61.1)
- **bit3:** Arc command during cutting mode (G64)

The line command block and arc command block won't be overlapped during G61.2 modal regardless of this setting.
(Note) This parameter is invalid during SSS control.

---Setting range---
0 to F (HEX)

<table>
<thead>
<tr>
<th>#1572</th>
<th>Cirorp Arc command overlap</th>
</tr>
</thead>
</table>

--- Setting range ---
00000000 to 11111111 (Binary)

Select the axis to be moved later after tool return.
This is referred to with the movement path (return start point -> transit point #2).
Up to eight axes can be specified by expressing one axis with one bit.

- **bit0:** Transit point #1 1st axis
- **bit1:** Transit point #1 2nd axis
- **bit2:** Transit point #1 3rd axis
- **bit3:** Transit point #1 4th axis
- **bit4:** Transit point #1 5th axis
- **bit5:** Transit point #1 6th axis
- **bit6:** Transit point #1 7th axis
- **bit7:** Transit point #1 8th axis

---Setting range---
00000000 to 11111111 (Binary)

Select the axis to be moved later after tool return.
This is referred to with the movement path (transit point #1 -> interrupt point).
Up to eight axes can be specified by expressing one axis with one bit.

- **bit0:** Transit point #1 1st axis
- **bit1:** Transit point #1 2nd axis
- **bit2:** Transit point #1 3rd axis
- **bit3:** Transit point #1 4th axis
- **bit4:** Transit point #1 5th axis
- **bit5:** Transit point #1 6th axis
- **bit6:** Transit point #1 7th axis
- **bit7:** Transit point #1 8th axis

---Setting range---
00000000 to 11111111 (Binary)
### #1595  hobm  Hobbing rotary tool axis No.

Specify the spindle No. or spindle name of rotary tool in "MITSUBISHI CNC Special Format (G81.4)" of hobbing command.

(Note) There are 2 spindle designation methods: spindle No. method and spindle name method. When the name (1 to 9) is set to the spindle name parameter (#3077 Sname) for all the spindles, the commands are issued with for each spindle name, other than that, the commands are issued with the spindle number.

---**Setting range---**

0 to 9

### #1596  hobs  Hobbing workpiece axis No.

Specify the NC axis No. of workpiece axis (in a part system) in "MITSUBISHI CNC Special Format (G81.4)" of hobbing command.

This parameter is valid when "#1292 ext28/bit4 (Hobbing workpiece axis selection switch)" is "0".

---**Setting range---**

1 to the number of NC axes (in a part system)

### #1599  3DEndPointErr  End point error in 3D coordinate conversion

Not used.

---**Setting range---**

### #12001  ManualB RectanA xH  Manual feed rate B constant surface control intersecting part system axis name (horizontal)

Not used. Set to “0”.

### #12002  ManualB RectanA xV  Manual feed rate B constant surface control intersecting part system axis name (vertical)

Not used. Set to “0”.

---**Setting range---**

### #12003  ManualB RotCenterH  Manual feed rate B constant surface control rotation center machine position (horizontal)

Not used. Set to “0.000”.

### #12004  ManualB RotCenterV  Manual feed rate B constant surface control rotation center machine position (vertical)

Not used. Set to “0.000”.

---**Setting range---**

### (PR) #12005  Mfig  Number of M

Set the number of M codes that can be specified within the same block.

---**Setting range---**

1 to 6

---**Setting range---**

### (PR) #12006  Mbin  M binary

Data type 0: BCD  
Data type 1: Unsigned binary  
Data type -1: Singed binary

<For unsigned binary>
The absolute value “1” is output for “-1”.
<For singed binary>
“-1” is output as “0xFFFFFFFF”.

---**Setting range---**

Data type

(-1,0,1)
Set the number of spindles.
(Note 1) The setting range differs according to the model.
(Note 2) "Sfig" is set in the range of 1 to 8. However, the number of outputs by "Sfig" cannot be controlled. Thus, only one S command is output regardless of the Sfig setting value.

---Setting range---
1 to 8

#12049 SBS_no Sub part system I identification No.

- Specify the ID number (address B value) to be used when activating this part system as a sub part system during G122 command. Set to "0" when this part system is not used as a sub part system.
- ---Setting range---
- 0 to 99999999

#12050 SBS_pro Sub part system I standard program No.

- Specify the No. of program to be called when activating this part system as a sub part system during G122 command. This parameter setting is used when a program designation (address A value/<file name>) is omitted.
- ---Setting range---
- 0 to 99999999
### 16 Machine Parameters

#### #12052 Jerk_filtG0 G00 jerk filter
Specify the time constant of filter that is used for smoothing the change of jerk when pre-interpolation acceleration/deceleration is performed in cutting feed.

This filter causes no path error, as the filter is applied to the resultant speed calculated before interpolation.

If you specify the jerk filter time constant, the time constants of each filter will be as follows:

- S-shape filter time constant
  "#1569 SfiltG0" - "Jerk_filtG0"
- Jerk filter time constant
  "Jerk_filtG0"

---Setting range---
0 to 50 (ms)

#### #12053 EachAxAccCntrl Enable per-axis acceleration tolerance control
Not used. Set to "0".

(Pr) #### #12054 Tol-Ofsnum Number of tool offset sets for allocation
Not used. Set to "0".

(Pr) #### #12055 Tol-lifenum Number of life management tools for allocation
Specify the number of life management tools to be allocated when the arbitrary allocation method is selected for life management tools.

---Setting range---
0 to 1000

#### #12056 I_G0ol Enable G00 initial rapid traverse block overlap
Select the state (enabled or disabled) of the rapid traverse block overlap function after reset.
0: Disabled
1: Enabled

#### #12057 OT_prechkON Enabling stroke check before travel for stored stroke limit
Not used.

#### #12058 OT_prechkTYPE Stroke check before travel for skip and automatic tool length measurement
Not used.

#### #12059 SBS_name Sub part system name
Specify each sub part system name.

This name is displayed when the part system acts as a sub part system.

---Setting range---
4 or less characters consisting of both alphabets and numbers

#### #12060 VblAccPreInt Variable-acceleration pre-interpolation acceleration/deceleration ON
Not used. Set to "0".

(Pr) #### #12071-12078 adr_abs[1]-[8] Command address for arbitrary axis exchange
Specify the axis address to be given in an arbitrary axis exchange command for the part system.

(Note 1) This parameter is disabled when the arbitrary axis exchange function is unused.

(Note 2) Do not give an identical name to two or more of the parameters adr_abs[1] to adr_abs[8].

(Note 3) Do not leave any unspecified parameter in the middle between adr_abs[1] and [8].

(Note 4) Set the addresses of adr_abs[ ] in the same order as of the axis names (#1013 axname). Note that you can set a nonexistent axis name in the middle.

(Note 5) If there are 9 or more control axes per part system, specify the axis address that is programmed based on the basic axis configuration.

---Setting range---
Axis address such as X, Y, Z, U, V, W, A, B and C
Specify the incremental command address for each of the axes to be used in an arbitrary axis exchange command.

(Note 1) This parameter is disabled when the arbitrary axis exchange function is unused.

(Note 2) There is no need to set this parameter when command type (absolute or incremental) is not distinguished by the axis address (when "#1076 AbsInc" = "0").

(Note 3) Do not give an identical name to two or more of the parameters adr_inc[1] to adr_inc[8]. If there is any overlap, priority is given in the ascending order (adr_inc[1] to adr_inc[8]).

---Setting range---
Axis address such as X, Y, Z, U, V, W, A, B and C

#12088  Drn_F  Dry run speed
Specify a dry run speed for each part system.
When 0 is set, the manual feed rate selected by Manual feedrate method selection (JVS) signal is applied.

---Setting range---
0 to 1000000 (mm/min)

#12089  M2adr  2nd miscellaneous function address type
Select the address type of the 2nd miscellaneous function.
0: One-letter command for the 2nd miscellaneous function
1: Two-letter command for the 2nd miscellaneous function

---Setting range---
0 to 9

#12090  SnG43.1  Spindle designation for G43.1
Specify which spindle to be selected when G43.1 is commanded.
<Spindle No. type>
Specify by the spindle No. 1 to 8.
The 1st spindle is selected if you specify a nonexistent spindle No.
<Spindle name type>
Specify by the spindle name 1 to 9.
The 1st spindle is selected if you specify a nonexistent spindle name.

(Note) If names (1 to 9) have been set in the spindle name parameter "#3077 Sname" for all spindles, <Spindle name type> is used.

---Setting range---
0 to 9

#12103  2nd add T-ofs ON  2nd additional axis tool offset ON (for L system only)
Select whether to enable tool offset on the 2nd additional axis.
0: Disable
1: Enable

#12104  2nd add T-ofs set  2nd additional axis tool offset setting (for L system only)
Select on which axis to perform the 2nd additional axis tool offset.
Specify the axis address set in "#1013 axname".

---Setting range---
X,Y,Z,U,V,W,A,B,C

#12105  C_minTyp  Operation selection of minimum turning angle or less
Specify the operation when the turning angle is set the minimum turning angle (#1521 C_min) or less and the turning operation is not inserted, in the seams of the arc blocks during normal line control.
0: Interpolate before reaching arc end point.
1: Do not interpolate.
**#12125 slide-F Slide feedrate**

Specify the feedrate of slide movement.
(Note 1) Slide movement is performed at rapid traverse. The feedrate is applied to all the axes.
(Note 2) When "0" is set, 10% of the rapid traverse rate is applied.
(Note 3) If the set speed exceeds the rapid traverse rate, it is clamped to the rapid traverse rate.

---Setting range---

0 to 1000000 (mm/min)

**#12126 Mcngit_Tch_M Miscellaneous function code for tool exchange at machining interruption**

Specify the miscellaneous function code that is treated as the process start point in the tool exchange command.
(Note) The following M codes cannot be used: M00, M01, M02, M30, M98, M99 and M198.
If you set any of these, M06 is treated as the process start point.

---Setting range---

0 to 99999999
16.2 Base Axis Specification Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>#1010 srvunit</td>
<td>Output unit (servo) Specify the unit for data communicated with the servo drive unit. The data communicated between the NC and servo drive unit, and the servo movement data unit follow this specification. The standard value is &quot;D&quot;; however, set the optimum value according to the machine model and specifications.</td>
</tr>
<tr>
<td>#1013 axname</td>
<td>Axis name Set each axis' name with an alphabetic character. Use the characters X, Y, Z, U, V, W, A, B or C. (Note 1) Do not set the same name twice in one part system. The same name which is used in another part system can be set. (Note 2) The PLC name does not need to be set. (Numbers 1 to 6 are shown as the axis names.)</td>
</tr>
<tr>
<td>#1014 incax</td>
<td>Incremental command axis name Set the axis name when commanding an incremental value for the axis travel amount. (Note 1) Set an alphabet that is different from that of &quot;#1013 axname&quot;. (Note 2) There is no need to set this parameter when command type (absolute or incremental) is not distinguished by the axis address (when &quot;#1076 AbsInc&quot; = &quot;0&quot;).</td>
</tr>
<tr>
<td>#1015 cunit</td>
<td>Program command unit Set the minimum increment of program travel command.</td>
</tr>
<tr>
<td>#1017 rot</td>
<td>Rotational axis Select whether the axis is a rotary axis or linear axis. When rotary axis is set, the axis will be controlled with the rotary axis's coordinate system. Set the rotary axis type with &quot;#8213 Rotation axis type&quot;.</td>
</tr>
<tr>
<td>#1018 ccw</td>
<td>Motor CCW Select the direction of the motor rotation to the command direction.</td>
</tr>
</tbody>
</table>
Select the command method of program travel amount.

When the travel amount is commanded with the diameter dimensions, the travel distance will be 5mm when the command is 10mm of travel distance.

The travel amount per pulse will also be halved during manual pulse feed.

If diameter is selected, tool length, the wear compensation amount, and the workpiece coordinate offset will be displayed in diameter value. Other parameters concerning length will always be displayed in radius value.

0: Command with travel amount
1: Command with diameter dimension

Select “1” when using the spindle for contour control of NC axis (C-axis).

0: Servo axis is used for contour control.
1: Spindle is used for contour control.

Using a 4-digit number, set the drive unit interface channel No. and which axis in that channel is to be used when connecting a servo drive unit.

---Setting range---
A to Z and 1 to 9 (Two digits)
Setting is cleared when "0" is set

Set the name of the axis displayed on the screen with two characters. (X1, Z2, etc.)

Always use an alphabetic character (A to Z) for the first character.

---Setting range---
A to Z and 1 to 9 (Two digits)
Setting is cleared when "0" is set

Set the axis name for issuing a command to this axis during mixed control (cross axis control).

---Setting range---
A to Z
Setting is cleared when "0" is set

Set the axis name for issuing an incremental command to this axis during mixed control (cross axis control).

---Setting range---
A to Z
Setting is cleared when "0" is set

Select whether to update the absolute position data during automatic handle interrupt.

This parameter is enabled only when "#1145 l_abs" is set to "1".

0: Do not update (coordinate system shifted the amount of the interruption)
1: Update (same coordinates as when interrupt did not occur will be applied)

Select whether the tool length compensation and wear compensation are enabled during T command execution.

0: Tool length compensation enable Wear compensation enable
1: Tool length compensation enable Wear compensation disable
2: Tool length compensation disable Wear compensation enable
3: Tool length compensation disable Wear compensation disable
Select the manual reference position return method for the second return (after the coordinate system is established) and later.
The initial reference position return after the power ON is performed with dog-type return, and the coordinate system will be established.
(This setting is not required when the absolute position detection is used.)

0: High speed return
1: Dog-type

Select whether to correct the error when the servo is OFF.
0: Not correct the error
The command value will not change during servo OFF, and the movement amount during servo OFF will be handled as droop. When the servo is turned ON the next time, the axis will move to the command position where it used to be when the servo was turned OFF.
1: Correct the error
The command value and the current position will follow the feedback position. When the servo is turned ON the next time, the axis will not move.

During servo READY OFF, the operation will be always the same as of "Correct the error". (The current position will follow the position of the axis.)

Set the axis number of the slave axis in synchronous control.
The axis number is an NC number excluding the spindle and PLC axis.
Two or more slave axis cannot be set for one master axis.
This parameter cannot be set for a slave axis.
When using the multi-part system, the relation of the master axis and slave axis cannot extend over part systems.

0: No slave axis
1 to 32: 1st to 32nd axis

Select whether to display the axis counter or not.
This setting is enabled on the counter display screen (relative position counter, etc.).

0: Display
1: Not display

Select whether to enable or disable axis removal control.

0: Disable
1: Enable

Select the chopping axis.

0: Non-chopping axis
1: Chopping axis

0: Master axis and slave axis determine their zero points individually.
1: The zero points of both master and slave axes are determined by initializing the master axis’ zero point.

The slave axis moves in perfect synchronization with the master axis.
Set this to "1" for speed/current command synchronization control.
### #1494 dsp_ax_change

Axis order of counter display

Set this in order to change the axis order of counter display.

- If this is set, the axes will be displayed in ascending order.
- However, axis whose setting is "0" will be displayed after axes whose settings are between "1" and "16" are displayed.

*(Note 1)* When the same value is set for more than one axis, axis that is displayed on the left side on the parameter screen will be first displayed.

*(Note 2)* When both of the mixed control (cross axis control) and interchange coordinate position display ("1280 ext16/bit2" OFF) are valid, and when there are two or more valid part systems, this parameter will be ignored.

*(Note 3)* When the arbitrary axis exchange control (option) is ON, and when there are two or more valid part systems, this parameter will be ignored.

--- Setting range ---

- 0: The axis is displayed after the axes whose settings are between "1" and "16" are displayed.
- 1 to 16: Axes are displayed in ascending order.
- If the number other than "1" to "16" is set, it is dealt as "0" setting.

### #1495 grf_ax_direction

Axis travel direction in 2D graphic

Not used.

### #1496 push_typ

Stopper method in zero point establishing operation

- 0: Zero point establishing operation is determined by #1493.
- 1: When both the master and slave axes reach the current limit during stopper-method zero point establishment with #1493 set to 1, droop is cancelled, and the operation goes into the next step.

### #1601 axnameEx

Axis name extension letter

Not used.

### #1603 PLCdev_no

Axis device assignment No.

Specify the PLC I/F device assignment No. for the axis.

--- Setting range ---

- 0: No designation for assignment
- 1 to 32: Axis device assignment No.

### #1605 mgrnum

Machine group No.

Specify the machine group No. to which each axis belongs.

--- Setting range ---

- 0 to 32
### 16.3 Base Common Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>#1038 plcsel</td>
<td>Ladder selection</td>

<tr>
<td>(PR) #1040 M_inch</td>
<td>Constant input (inch)</td>
</tr>
<tr>
<td>(PR) #1041 l_inch</td>
<td>Initial state (inch)</td>
</tr>
<tr>
<td>(PR) #1042 pcinch</td>
<td>PLC axis command (inch)</td>
</tr>
</tbody>
</table>

- **#1038 plcsel**: Not used. Set to "0".
- **#1039 spinno**: Select the number of spindles.
  - 0: No spindle
  - 1 to 8: One to eight spindles

  *(Note)* The setting range differs according to the model.

- **#1040 M_inch**: Select the unit system for setting and display regarding machine parameter and PLC interface's position, length and speed.
  - 0: Metric system
  - 1: Inch system

- **#1041 l_inch**: Select the unit system for the program travel amount when the power is turned ON or reset and for position display.
  - 0: Metric system
  - 1: Inch system

  *(Note)* The units of the following data are converted by "#1041 l_inch".
  - Command unit at power ON and reset (Inch/metric command mode)
    - But under the following conditions, the unit will follow G20/G21 command modal even at reset.
      - When reset modal is retained ("#1151 rstint"="0")
      - When G code group 06 reset modal is retained ("#1210 RstGmd/bit5" ON)
  - Unit system for position display (counter, user parameter, tool, work offset)
  - User parameter I/O unit
  - Parameter unit of user parameters concerning length and speed
  - Arc error parameter (R108 RadErr)

- **#1042 pcinch**: Select the unit system for the commands to the PLC axis.
  - 0: Metric system
  - 1: Inch system
### #1043 lang

Select the display language.

- 0: English
- 1: Japanese
- 11: German
- 12: French
- 13: Italian
- 14: Spanish
- 15: Traditional Chinese
- 16: Korean
- 17: Portuguese
- 18: Dutch
- 19: Swedish
- 20: Hungarian
- 21: Polish
- 22: Simplified Chinese
- 23: Russian
- 24: Turkish
- 25: Czech

### #1044 auxno

Set the number of MR-J2-CTs connected.

(Note) The number of MR-J2-CTs possible to connect and setting range are different according to the model. Check the specifications of each series.

### #1045 nskno

Specify the number of NSK megatorque motors connected. When a value other than 0 is specified, 2nd miscellaneous function data is output as signed binary data.

---Setting range---

0 to 16

### #1046 T-ofs disp type

Tool compensation display type switch (for M system only)

Not used.

### #1047 G_Chg_En_Sno

Select program format switch-enabled part system

Not used.

### #1051 MemTol

Tool compensation memory common for part systems

0: Tool compensation memory separate for part systems
1: Tool compensation memory common for part systems
16 Machine Parameters

<table>
<thead>
<tr>
<th>Parameter</th>

</tbody>
</table>

- **(PR) #1052 MemVal**
  - 0: Common variables common for part systems (number fixed)
  - #100: Per part system
  - #500: Common for part systems
  - 1: Common variables common for part systems (number designation)
  - #100: Designate with V1comN
  - #500: Designate with V0comN

- **(Note 1)** When this parameter is changed, the file system will be changed after the power is turned ON. So always execute format. The new format will be enabled after turning the power ON again.
  - Setting order:
    1. MemVal changeover -> 2. Turn power ON again -> 3. Format -> 4. Turn power ON again

- **(Note 2)** When this parameter is set to "1", #900000 to #907399 are not available even if the number of common variables is 8000.

- **#1077 radius**
  - Select whether the incremental command of the diameter specification axis ("#1019 dia" is set to "1") uses the diameter value or radius value.
  - 0: Diameter value
  - 1: Radius value

- **#1078 Decpt2**
  - Select the increment of position commands that do not have a decimal point.
  - 0: Minimum input command unit (follows "#1015 cunit")
  - 1: 1mm (or 1inch) unit (For the dwell time, 1s unit is used.)

- **#1079 F1digt**
  - Select the F command method.
  - 0: Direct numerical command (command feedrate during feed per minute or rotation)
  - 1: 1-digit code command (feedrate set with "#1185 spd_F1" to "#1189 spd_F5")

- **#1080 Dril_Z**
  - Select a fixed cycle hole drilling axis.
  - 0: Use an axis vertical to the selected plane as hole drilling axis.
  - 1: Use the Z axis as the hole drilling axis regardless of the selected plane.

- **#1081 Gmac_P**
  - Select the G code priority relationship during the macro call with G command.
  - 0: Priority is on G code used in the system
  - 1: Priority is on registered G code for call

- **#1082 Geomet**
  - Select the type of geometric to use.
  - 0: Not use
  - 1: Use only geometric I
  - 2: Use geometric I and IB

- **#1084 RadErr**
  - Set the tolerable error range when the end point deviates from the center coordinate in the circular command.
  - **Setting range**: 0 to 1.000 (mm)
<table>

<td>(Note) When &quot;3&quot; is set for the L system, the tool life management I is selected.</td>
</tr>
</tbody>
</table>
Select the number of digits for an offset No. in command T.

0: Lower two digits of command T serve as an offset No.; the remaining upper digits as a tool No.
1: Lower one digit of command T serves as an offset No.; the remaining upper digits as a tool No.
2: Lower two digits of command T serve as an offset No., the remaining upper digits as a tool No.
3: Lower three digits of command T serve as an offset No.; the remaining upper digits as a tool No.

Select the number of digits of the tool length compensation No. in the T command.

0: Lower 3 digits in T code serve as a tool length and wear offset Nos.; the remaining upper digits as a tool No.
1: Lower 3 digits in T code serve as a tool wear offset No.; the remaining upper digits as a tool No. and tool length offset No.

Select how to handle the tool compensation vector when resetting the system.

0: Clear the tool length and wear compensation vectors when resetting
1: Hold the tool length and wear compensation vectors when resetting

When the values are cleared, the compensation will not be applied. So the axis will be shifted by the compensation amount in the next compensation operation.
When the values are kept, the compensation will be applied, so the axis will shift the differential amount of the compensation amount in the next compensation operation.

Select when to perform tool length compensation and wear compensation.

0: Compensate when T command is executed.
1: Superimpose and compensate with the travel command in the block where the T command is located.
If there is no travel command in the same block, compensation will be executed after the travel command is superimposed in the next travel command block.
2: Compensate the wear amount when the T command is executed. Superimpose and compensate the tool length compensation amount with the travel command in the same block. If there is no travel command in the same block, compensation will be executed after the travel command is superimposed in the next travel command block.

Select the type of travel command when "#1103 T_Life" is set to "1" or "2".

0: Compensate regardless of the travel command type (absolute or incremental)
1: Compensate only at the travel command in the absolute command

Select whether to use the tool life management.

0: Not use tool life management.
1: Use tool life management.

Select how to handle the tool command in the program when "#1103 T_Life" is set to "1".

0: Handle the command as group No.
1: Handle the command as tool No.
(Note) In the case of the tool life management III, the program tool command will be handled as the tool No. regardless of the setting.

Select the tool selection method when "#1103 T_Life" is set to "1".

0: Select in order of registered No. from the tools used in the same group.
1: Select the tool with the longest remaining life from the tools used or unused in the same group.

**#1119 Tmiron**

Select whether to enable the mirror image of each facing turret with the T command.

- 0: Disable
- 1: Enable

**#1120 TofVal**

Select whether to change the macro variable (tool offset) numbers for shape compensation and wear compensation.

- 0: Not change (Conventional specification)
- 1: Change the shape and wear compensation variable numbers each for X, Z, and R

**#1121 edlk_c**

Select the edit lock for program Nos. 9000 to 9999 in memory.

- 0: Editing possible
- 1: Editing prohibited. The file cannot be opened.

(Note) If "#1122" is set to "1" or "2", "1" will be set in "#1121" when the power is turned ON.

**#1122 pglk_c**

Select whether to prohibit the program display and search for program Nos. 9000 to 9999 in memory.

- 0: Program display and search is possible
- 1: Program display is impossible. Search is possible.
- 2: Program display and search is impossible

The program details will not be displayed, but the program No. and sequence No. will display in the prohibited state.

(Note) If "#1122" is set to "1" or "2", "1" will be set in "#1121" when the power is turned ON.

**#1123 origin**

Select whether to use the origin set function.

- 0: Use
- 1: Not use

**#1124 ofsfix**

Select how to handle the compensation No. when the input key is pressed on the tool compensation screen.

- 0: Increment the compensation No. by 1 (Same as general parameters)
- 1: # compensation No. does not change

When setting in sequence, "0" is handier. When changing and setting repeatedly while adjusting one compensation value, "1" is handier.

**#1125 real_f**

Select the feedrate display on the monitor screen.

- 0: Command speed
- 1: Actual travel feedrate

**#1126 PB_G90**

Select the method to command the playback travel amount in the playback editing.

- 0: Incremental value
- 1: Absolute value

**#1127 DPRINT**

Select the alignment for printing out with the DPRINT function.

- 0: No alignment, output s printed with left justification
- 1: Align the minimum digit and output

</tbody>
</table>
bit3: Parameter input/output format

Select the parameter input/output format.

0: Type I
   Displayed on one line per parameter.
   (Example)
   N1001T1P1
   N1001T2P1
   N1001T3P0

1: Type II
   Data with the same parameter number is displayed on the same line.
   (Example)
   N1001 T1 P1 T2 P1 T3 P0

bit4: External workpiece coordinate offset tool number selection

Select the R register that contains the tool number used for automatic calculation when measuring the coordinate offset of an external workpiece.

0: Follow the setting of "#1130 set_t".
1: Use the tool number indicated by user PLC.

bit5: Parameter I/O II spindle specification address

Select the spindle specification address of parameter I/O type II.

0: C
1: T

This parameter is also applied to the spindle specification address for input and verification.

(Note) This parameter is valid only for parameter I/O type II (when "#1218 aux02/bit3" is set to "1").
bit1: Stop high-speed PC monitoring function

Set "1" to disable the function that triggers the emergency stop when the PC high-speed processing time is extended.

Disable the monitoring function only as a temporary measure.

bit5: Dog-type intermediate point

Select whether to move to the intermediate point during automatic dog-type reference position return.

0: Not move.
1: Move.

bit7: Time constant setting changeover for soft acceleration/deceleration

0: Accelerating time is $G0tL(G1tL)$. When the G00 pre-interpolation acceleration/deceleration and the soft acceleration/deceleration are used together, the inclination of soft acceleration/deceleration will be steeper by setting a time to the soft acceleration/deceleration 2nd step time constant (#2005 G0t1). Consequently, the acceleration for G28/G30 will be larger than that for G00.

(1) Total accelerating time is "G0tL".
(2) The time for curve part is "G0t1".
(3) The time for linear part is obtained by "G0tL-(2 x G0t1)".

1: Accelerating time is obtained by $G0tL + G0t1 (G1tL + G1t1)$. When the G00 pre-interpolation acceleration/deceleration and the soft acceleration/deceleration are used together, you can attain the G28/G30 acceleration that is equal to G00, by setting the same value to G00 soft acceleration/deceleration filter (#1569 SfiltG0) as well as to the soft acceleration/deceleration 2nd step time constant (#2005 G0t1).

(1) Total accelerating time is obtained by "G0tL+G0t1".
(2) The time for curve part is "G0t1".
(3) The time for linear part is obtained by "G0tL-G0t1".
bit0: Tool life check timing selection

Select the criterion to judge the end of tool life when the cumulative number of cuttings is incremented in tool life management II.

0: Determine the tool life end when the incremented cumulative number of cuttings has exceeded the estimated number of cuttings. (Default)  
(cumulative number of cuttings > estimated number of cuttings)

1: Determine the tool life end when the incremented cumulative number of cuttings has reached the estimated number of cuttings.  
(cumulative number of cuttings >= estimated number of cuttings)

bit0: Workpiece coordinate/absolute coordinate display switch

Select whether to display the workpiece coordinate or to display the absolute coordinate in the coordinate value screen, command value screen or modal information screen.

0: Workpiece coordinate

1: Absolute coordinate

bit4: Minimum cut-in amount selection

Select the minimum cut-in amount command value for the compound thread cutting cycle (G76 command).

0: The minimum cut-in amount (Q) will be "0".

1: The minimum cut-in amount (Q) will be set in the last command value (it is retained even after the NC power has been turned off).

bit5: Fixed cycle for compound lathe command format check selection

Select the operation when the 1st block of the fixed cycle for compound lathe is omitted while the conventional format is selected ("#1265 ext01/bit0" is set to "0").

0: Program error (P33) will occur.

1: Parameter setting value will be used.

bit7: Reference position return deceleration check method

Select the deceleration check method to be used during automatic reference position return.

0: In-position check

1: Commanded deceleration check
### #1223 aux07

**bit1: Deceleration check method 2**

Select the deceleration check method in G1+G9.

0: Command deceleration check in G1+G9
1: In-position check in G1+G9

The deceleration check is not performed for the commands except G1+G9. When "#1306 InpsTyp deceleration check specification type" is set to "1" (Deceleration check specification type 2), this parameter will be invalid.

**bit2: Synchronous tap R-point in-position check**

Select whether to enable the synchronous tap I-point -> R-point in-position check.

0: Disable
1: Enable

(Note) This parameter is valid only when "1" (Enable in-position check) is set for "#1223 aux07/bit3 Synchronous tap in-position check improvement".

**bit3: Synchronous tap in-position check improvement**

Select whether to enable the synchronous tap in-position check improvement.

0: Disable
1: Enable

Related parameters:
- #1223/bit2 Synchronous tap R-point in-position check
- #1223/bit4 Synchronous tap hole bottom in-position check
- #1223/bit5 Synchronous tap R-point in-position check 2

**bit4: Synchronous tap hole bottom in-position check**

Select whether to enable the synchronous tap hole bottom in-position check.

0: Disable
1: Enable

(Note) This parameter is valid only when "1" (Enable in-position check) is set for "#1223 aux07/bit3 Synchronous tap in-position check improvement".

**bit5: Synchronous tap R-point in-position check 2**

Select whether to enable the synchronous tap R-point in-position check.

0: Disable
1: Enable

(Note) This parameter is valid only when "1" (Enable in-position check) is set for "#1223 aux07/bit3 Synchronous tap in-position check improvement".

**bit6: Cancel synchronous tap (, S) return**

0: Retain the spindle speed (,S) in synchronous tap return
1: Cancel the spindle speed (,S) in synchronous tap return with G80

**bit7: Synchronous tap method**

Specify a synchronous tap method.

0: Synchronous tap with multi-step acceleration deceleration
1: Conventional type synchronous tap
bit0: Sampling data output
Select whether to enable the sampling data output.
0: Disable
1: Enable

bit7: Enable/disable spindle rotation speed clamp
Select whether to enable the spindle rotation speed clamp by the G92 S or Q command for the spindle command rotation speed (R7000) set with the user ladder.
0: Enable
1: Disable

bit0: Tool compensation data for external workpiece coordinate offset measurement
Select the tool compensation data to be used for external workpiece coordinate offset measurement.
0: Tool length data and tool nose wear data
1: Tool length data

bit1: Optional block skip type
Select whether to enable the optional block skip in the middle of a block.
0: Enable only at the beginning of a block.
1: Enable in the middle of a block, as well as at the beginning of the block.
Note that a slash "/" in an equation between [ ] is handled as division operator.
(Note) This parameter is enabled when "#1274 ext10/bit4" is 0.

bit2: Single block stop timing
Select the timing at which the single block signal is activated.
0: When the signal goes ON while automatic operation is starting, the block will stop after finished.
1: When the signal is ON at the end of the block, the block will stop.

bit3: C-axis reference position return type
Select the C-axis reference position return type.
0: Basic position return is performed by the G28 reference position return command or by activating the manual reference position return. The basic point dog is used.
1: When the first C-axis command is issued after the C-axis mode is entered in automatic mode, reference position return is performed before the execution of the block. The reference position return is also performed by the G28 reference position return command or by activating the manual reference position return. The Z phase of the encoder is used.

bit4: S command during constant surface speed
Select whether to output a strobe signal when the S command is issued in constant surface speed mode.
0: Not output any strobe signal in constant surface speed mode.
1: Output strobe signals in constant surface speed mode.

bit5: Arbitrary allocation of dog signal
Select whether to enable the arbitrary allocation parameter for the origin dog and H/W OT.
0: Disable (Fixed device is used.)
1: Enable (Device is specified by the parameter.)

bit6:
Not used.

bit7: Shorten JOG stop time
Specify whether to shorten the JOG stop time.
0: Do not shorten the JOG stop time. (Same as before)
1: Shorten the JOG stop time.
bit0: Select PLC signal or spindle feedrate attained
Set up this option when disabling the cutting start interlock by spindle feedrate attained.
0: Cutting start interlock by PLC signal
1: Cutting start interlock by spindle feedrate attained

bit1: Select H or D code
Set up this option to validate the data that is set up on the tool life management screen when issuing the H99 or D99 command.
0: The H and D codes validate the data that is set up on the management setup screen.
1: Validates the data that is set up on the management setup screen when issuing the H99 or D99 command.

bit2: Measures against tool setter chattering
Select a condition where a relieving operation completes after measurement with tools.
0: Sensor signals have stopped for 500 ms or longer.
1: 100 μm or longer has passed after sensor signals stopped.

bit3:
Not used.

bit4: Word command check
Select whether to output an error when no numeric value follows a program address during execution of a machining program.
0: Not check
1: Check

bit5: Spindle rotation speed clamp
Specify whether to clamp the rotation speed in constant surface speed mode when the spindle rotation clamp command is issued.
0: Clamps the rotation regardless of the constant surface speed mode.
1: Clamps the rotation only in constant surface speed mode.

bit7: Switch the range of tool life data to be input
Set up the range of tool life data to be input or compared.
0: Inputs or compares all of the data output.
1: Inputs or compares part of the data output

1) Tool life management I data to be input or compared
   Tool number (D), lifetime (E), life count (F), and auxiliary data (B).

2) Tool life management II data to be input or compared
   Group number (G), method (M), life (E/F), tool number (D), and compensation number (H)
bit0:
When not using, set to "0".

bit1: Switch "offset and parameter" screen
Select to switch the "offset and parameter" screen to the parameter screen.
0: Display the "offset and parameter" screen.
1: Display the "parameter" screen.

bit2:
Not used.

bit3: Nose R specification
Select whether to specify the nose R compensation by shape or wear number.
0: Specifies the nose R compensation by shape number.
1: Specifies the nose R compensation by wear number.

bit4: Select operation error or stop code
Select operation error or stop code to provide for both block start and cutting start interlocks.
0: Operation error
1: Stop code

bit5: Select constant surface speed coordinates
Select the constant surface speed coordinate.
0: Workpiece coordinate
1: Absolute value coordinate

bit6: Switch relative values displayed
Select whether to preset the relative coordinates with workpiece coordinate preset (G92.1) or counter preset (G92).
0: Preset the relative coordinates.
1: Not preset the relative coordinates.

bit7: Protection with manual value command
Select whether to protect a manual value command.
0: Not protect. (Conventional specification)
1: Protect.
bit0: Subprogram interrupt
Select the type of the user macro interrupt.
0: Macro type user macro interrupt
1: Sub-program type user macro interrupt

bit1: Accurate thread cutting E
Select what the address E specifies in inch screw cutting.
0: Number of threads per inch
1: Precision lead

bit2: Radius compensation type B (for M system only)
Select the method of the arithmetic processing for the intersection point when the start-up or cancel command is operated during radius compensation.
0: The processing does not handle the start-up or cancel command block: handle the offset vector in the direction vertical to that of the command instead.
1: The processing is executed for the intersection point between the command block and the next block.

bit2: Nose R compensation type B (for L system only)
Select the method of the arithmetic processing for the intersection point when the start-up or cancel commands are operated during nose R or radius compensation.
0: The processing does not handle the start-up or cancel command block: handle the offset vector in the direction vertical to that of the command instead.
1: The processing is executed for the intersection point between the command block and the next block.

bit3: Initial constant surface speed
Select the initial state after the power-ON.
0: Constant surface speed control cancel mode
1: Constant surface speed control mode

bit4: Synchronous tap
Select the operation when ",R" is omitted in G74/G84 tapping cycle.
0: Asynchronous tap
1: Synchronous tap

bit5: Start point alarm
Select the operation when the operation start point cannot be found while executing the next block of G115, G116 or G117.
0: (G115/G116)Starts after the block has been moved.
   (G117)Enables an auxiliary function after the block has been moved.
1: (G115)Waits until reaching start point at the movement after next block when the operation start point is not found.
   (G116/G117)Outputs an program error (P33) when the operation start point is not found.

bit6: Grid display selection
Select the grid display type on the servo monitor screen during the dog type reference position return.
0: Distance between dog OFF and basic point (including a grid mask amount)
1: A value given by reducing a grid mask amount from the distance between dog OFF and basic point

bit2: Proximity switch spindle orientation: Z phase re-detection request type
Select when to request Z phase re-detection for proximity switch type spindle orientation.
0: After confirming the spindle has reached the Z phase detection speed.
1: Right after Servo ON of the spindle.

bit7: Macro interface input/output for each part system
Select the specification of the macro interface input/output.
0: Shared by all part systems.
1: Used independently by the part systems.
#1231 set03
Not used. Set to "0".

#1232 set04
bit0: Exclude acceleration/deceleration in load monitor
Not used. Set to "0".
bit5: Actual load selection
Load fluctuation due to speed change is excluded from the actual load.
0: Disable
1: Enable
(Note) When "Actual load selection" ("#1232 set04/bit5") is enabled, "Spindle function 8" ("#13228 SP228/bi2") needs to be set to "1" (load display, high-cycle motor output effective value).

#1233 set05
When not using, set to "0".

#1234 set06
bit3: Interlock when tap retract enabled
Select whether to enable automatic/manual interlock for the part system with "Tap retract enable" signal ON.
0: Interlock all the axes
1: Disable the interlock

#1235 set07
bit0: Helical interpolation speed 2
0: Select normal speed designation also for 3rd axis
1: Select arc plane element speed designation
bit2: Fixed type chopping compensation valid only at start
When the fixed type compensation value is selected, the method can be changed to the compensation value sequential update type after the first four cycles.
0: Disable the method changeover
1: Enable the method changeover
bit4: Selection condition of synchronous tapping gear step
Select the parameters that determine the gear step for synchronous tapping.
0: #3005 through #3008 (smax1 to 4) when "#1223 aux07/bit7" is "0".
   Or #3013 through #3016 (stap1 to 4) when "#1223 aux07/bit7" is "1".
1: Always #3013 through #3016 (stap1 to 4)
#1236 set08

**bit0: Manual rotary axis feedrate unit**

Select the unit of manual rotary axis feedrate.

- 0: Fixed to [°/min]
- 1: Same speed as before (When inch command, the speed is the command speed divided by 25.4.)

**bit1: Spindle speed detection**

Select the pulse input source of actual spindle rotation speed (R6506/R6507) when the spindle encoder serial connection is selected ("#3025 enc-on" is set to "2").

- 0: Serial input
- 1: Encoder input connector

**bit2: Current limit droop cancel invalid**

Select whether to cancel the position droop when the current limit changeover signal is canceled.

- 0: Cancel the droop.
- 1: Not cancel the droop.

**bit3: Rotary axis command speed scale**

Select to multiply the rotary axis command speed by 10 times.

- 0: Invalid
- 1: During initial inching, the rotary axis command speed is multiplied by 10. In other words, if "F100" is commanded, the speed will be the same as when 1000°/min is commanded. The rotary axis speed display unit will be 10°/min.

(PR) #1237 set09

Not used. Set to "0".
bit0: Switch G36 function
Not used. Set to "0".

bit3: Ignoring input from RIO
Select whether to ignore the input from RIO.
0: Output the input from RIO to the device X.
1: Ignore the input from RIO, and not output it to X device.
(X000 to X0FF, X100 to X1FF and X200 to X2BF)
* Normally set this parameter to "0".
* The devices X2C0 to X2FF are used for the handle pulse input and board reset from the operation panel I/O unit card (HN391/HN392), thus are excluded from the target.

bit6: Switch absolute position detection alarm
Select the output destination of the absolute position detection alarm.
0: NC alarm 4 (AL4)
1: NC alarm 5 (AL5)
(Note) The absolute position detection alarm is listed in the alarm history regardless of this parameter setting.

bit7: Switch operation alarm
Select whether to enable the NC alarm 5 (AL5) signal output.
0: Disable NC alarm 5 (AL5)
   All operation alarms will be output to NC alarm 4 (AL4).
1: Enable NC alarm 5 (AL5)
   The following operation alarms will be output to NC alarm 5 (AL5), not to NC alarm 4 (AL4).
   • External interlock axis exists (M01 0004)
   • Cutting override zero (M01 0102)
   • External feedrate zero (M01 0103)
   • Block start interlock (M01 0109)
   • Cutting block start interlock (M01 0110)
   • Interference check disabled (M01 0200)
   • Cutting interlock for spindle-spindle polygon (G51.2) (M01 1033)
   The above alarms are not recorded in the alarm history regardless of the setting value of this parameter.

</table>
bit0: Prevention of program error due to incorrect G code combination

When a G code from some modal groups is commanded in the same block as an unmodal G code, a program error due to incorrect G code combination occurs. This parameter is used to avoid this program error.

0: The program error (P45) will occur.
1: The program error is avoided, however, a G code from an uncombinable modal group is ignored.

bit1: Interference check at starting up radius compensation (for M system only)

Interference check at starting up nose R compensation (for L system only)

0: In a start-up block, an interference check is not carried out.
1: An error occurs even at a start-up block if an interference occurs.

The error occurs even when the interference avoidance is set to ON (#8102="1"). However, an interference check is not carried out when it is set to OFF (#8103="1").

bit4: Plane axis check invalid in fixed cycle for turning machining

Select whether to raise a program error when a fixed cycle for turning machining is commanded in either of the following conditions:
* The commanded axis does not coincide with the selected plane
* One or both of the selected plane axes have no movement

0: Raise a program error
1: Not raise a program error

bit5: Macro argument L/P valid

Select whether to enable L and P to be used as argument of G(MSTB) macro command or ASCII code macro command.

0: L and P commands cannot be used.
1: L and P commands can be used as argument.

bit7: Spindle rotation speed during synchronous tap return

Specify how to operate in a sync tap command block if the tap return spindle rotation speed (,S) is lower than the tap spindle rotation speed (S).

0: Operate at the tap return spindle rotation speed (,S)
1: Operate at the tap spindle rotation speed (S)

bit0: Ignoring timing sync in multi-system simultaneous thread cut cycle I (G76.1)

Select whether to execute timing synchronization during multi-part system simultaneous thread cut cycle I (G76.1).

0: Execute timing synchronization at the start and end of thread cutting.
1: Ignore the timing synchronization given during the cycle.

bit1: G92.1 single command error check ON

Select whether to enable the error check when G92.1 (G50.3) is given alone in a block.

0: Disable the error check
1: Enable the error check

bit6: G113 command type when multiple spindle synchronization set valid

Specify the G113 command type of when multiple spindle synchronization set is valid.

0: Cancels all the spindle synchronization by issuing G113H0 or G113D0.
1: Cancels all the spindle synchronization by issuing G113.

Not used. Set to "0".
### #1244 set16

#### bit0: No superimposition of timing synchronization block onto subsequent block

0: Superimpose a block, where timing synchronization command is given as a single command, onto the subsequent block, and treat the blocks as one block.
1: Treat a block, where timing synchronization command is given as a single command, as one block.

#### bit1: Enable automatic re-calculation after timing synchronization

0: Look-ahead a block next to the timing synchronization command block.
1: Automatically re-calculate a block next to the timing synchronization command block after the synchronization has been completed.

#### bit2: Balance cut in all the blocks

Select in which block(s) to execute synchronization between part systems when a balance cut command is given.

0: Execute synchronization in cutting feed command block(s).
1: Execute synchronization in all the blocks.

#### bit3: Enable tool offset at start/stop of arbitrary axis superimposition

Not used. Set to "0".

#### bit4: Speed clamp method under superimposition control

Not used. Set to "0".

#### bit5: Read of position info with superimposing travel distance taken into account

Select whether to take into account the superimposing travel distance (travel distance of the reference axis) when reading position info (machine coordinates/skip coordinates) using a variable under control axis superimposition or arbitrary axis superimposition control.

0: Not take the distance into account
1: Take the distance into account

#### bit6: Axis address check ON

Select whether to output a program error (P32) when any address other than those specified by "#1013 ax-name" and "#1014 incax" is given as an axis address.

If the arbitrary axis exchange function is ON, select whether to output a program error (P32) when any address other than those specified by "#12071-12078 adr_abs[1]-[8]" and "#12079-12086 adr_inc[1]-[8]" is given as an axis address.

0: Not output a program error (P32). (Ignore the axis address.)
1: Output a program error (P32)

### #1245 set17

#### bit7: Synchronous tap spindle rotation direction type

Select whether the spindle's rotation direction is determined by the synchronous tapping axis' travel direction.

0: The spindle's rotation direction is determined by the synchronous tapping axis' travel direction.
   - When the travel direction is negative, the spindle rotates forward.
   - When the travel direction is positive, the spindle rotates in reverse.
1: The spindle always rotates forward regardless of the synchronous tapping axis' travel direction.
   (Note) When a reverse tap is commanded, the spindle rotates in an opposite direction to that mentioned above.
bit0: Thread cut override ON
Select whether to enable spindle override during thread cutting.
0: Disable
1: Enable

bit1: Thread cut override feed hold
Select whether to perform feed hold when spindle override is changed during thread cutting.
0: Not perform feed hold
1: Perform feed hold

bit2: Switch coordinate systems for radius compensation
Select the coordinate system for radius compensation.
0: Type 1 (Conventional specification)
   Perform radius compensation with reference to a position on the workpiece coordinate system.
1: Type 2
   Perform radius compensation with reference to a position on the program coordinate system.

bit3: Change repetition final return position at M2L
Select the final return position after repetition, when in G99 modal and in M2 format with the label L.
0: Initial point
1: R point

bit4: T-lifeover signal output
Select the timing at which tool life over signal is output when using the M system tool life management I/III.
0: Turn the signal ON when a selected tool has reached the lifetime.
1: Turn the signal ON when any of tools (in the case of the tool life management III, all the registered tools) in a selected group has reached the lifetime.

bit5: Tool status update type
Select whether to update tool status automatically when estimated tool life data/cumulative usage data is changed on the screen in the M system tool life management I/II/III.
0: Not update.
1: Update.
(Note) When "1" is selected, tool status will be updated as follows.
- When usage data is "0", tool status will be "0".
- When usage data is smaller than lifetime data, tool status will be "1".
- When usage data is the same as or larger than lifetime data, tool status will be "2".

bit6: Switch F 1-digit feedrate change method
Set whether to enable feedrate change with handle until power OFF, or change the parameters #1185 to #1189 with change of speed.
0: Enabled until power OFF
1: Change #1185 spd_F1 to #1189 spd_F5

bit7: PLC axis random device assignment
Select whether to enable the origin dog and H/W OT random assignment for a PLC axis.
0: Disable (assigned to a fixed device)
1: Enable (assigned to the parameter set device)
### Machine Parameters

<table>
<thead>
<tr>
<th>Parameter</th>

<td><strong>bit0</strong>: Load inertia ratio display**&lt;br&gt;<strong>Select whether to show the load inertia ratio of servo and spindle units on the drive monitor screen.&lt;br&gt;0: Display&lt;br&gt;1: Not display (Show zero)</strong></td>
</tr>
</tbody>
</table>
| **bit1**: Spindle temperature display**<br>**Select whether or not to display the spindle unit temperature on the drive monitor screen.<br>0: Display according to "#13225 SP225/bit2"
1: Not display (Show zero)** |
| **bit3**: Non-display of completion message (display unit (GOT))**<br>**Select whether to display completion messages on the display unit (GOT).<br>0: Display<br>1: Not display** |
bit0: Number of machine tool builder macro definition files
Select the number of definition files for machine tool builder macro.
0: One (O199999999)
1: Ten (O199999990 to O199999999)

bit2: Acceleration/Deceleration mode change in hole drilling cycle
Change the acceleration/deceleration mode of hole drilling cycle.
0: The operation follows the parameter setting.
   The setting of #1153 is enabled.
1: A constant inclination acceleration/deceleration and an acceleration/deceleration after interpolation are applied to the hole drilling cycle.
   The setting of #19417 is enabled.

bit4: Clearing data at fixed cycle mode switch
Select whether to zero clear the argument data at the time of fixed cycle mode switch.
0: Do not zero clear the argument data
1: Zero clear the argument data

bit5: G53 motion type
Change the motion type for G53 command.
0: Cutting feed or rapid traverse is determined by the active modal status.
1: Fixed to rapid traverse.

bit6: Switch G68/G69 function
Select whether to use G68/G69 as tool post mirror image function or balance cut function when the selected G code system is 6 or 7.
0: Facing turret mirror image
1: Balance cut

bit0: Reducing processing time of zero-travel-distance block (for L system only)
Select whether to reduce the processing time of a zero-travel-distance block.
0: Disable the reduction of non-travel block processing time.
1: Enable the reduction of non-travel block processing time.

bit3: Select timing for updating axis parameter
Select the timing for when to update axis parameter.
0: Update after All axes smoothing zero turns ON for all the part systems.
1: Update after All axes smoothing zero turns ON for each part system.

bit0: Switch to C axis mode at cancel of EMG stop/door open under spindle C axis
Select whether to switch the control to C axis mode when you execute and cancel emergency stop, or turn ON and OFF the door open signal under spindle C axis control mode.
(This takes effect when spindle/C axis switch method is PLC signal type.)
0: Not switch to C axis mode.
   Control is switched to C axis mode when C axis' Servo OFF signal is turned OFF and ON after cancel of emergency stop or door open.
1: Switch to C axis mode when emergency stop or door open is cancelled.

Not used. Set to "0".
bit0: Skip I/F switch

Select A or B contact for the skip interface.
0: A contact (Skip operation starts at rising edge of a signal)
1: B contact (Skip operation starts at falling edge of a signal)
(Note) This parameter is not applied to PLC skip.

bit1: Alarm "Excess posn devia. at power ON" valid

Select which alarm to be issued when a deviation of machine position between before the power OFF and after the power ON is greater than the value set in "#2051 check".
0: Alarm "Z70 0006 Absolute position error"
1: Alarm "Z70 0007 Excess posn devia. at power ON"

bit4: Thread recut command

Specify through which interface to give a thread recut command.
0: Through HMI screen
1: Through PLC I/F

bit5: Addition of command Q to thread recut

Select whether to add the command Q's data to the spindle angle to be compensated during thread recut of a stored thread section.
0: Not add the command Q's data
1: Add the command Q's data

bit6: Spindle compensation angle in thread recut mode

Select whether to calculate the spindle compensation angle when a thread cut command is given during the thread recut mode.
0: Calculate the angle for the initial thread cut command in automatic operation. (The initially calculated angle is used for the 2nd and subsequent thread cut commands.)
1: Calculate the angle every time a thread cut command is given.

bit0: Enable normal life tool's data count (for M system only)

Select whether to enable or disable tool use data counting when the tool status is 2 (normal life tool).
0: Not count the use data of normal life tool.
1: Count the use data of normal life tool.

bit2: Disabling decimal point for PLC window

Select the input/output specifications of fraction data for PLC window.
0: Enable decimal point
  Fraction data is output as the fixed fraction information.
  (The numbers of digits in the integer and fraction parts are the same as of the on-screen specifications.)
1: Disable decimal point (cut off all digits after decimal point)
  Only the integer part is input/output.

bit4: Thread cut start shift angle operation

Select the operation to be performed at the start of thread cutting when a thread cut start shift angle command is issued.
0: Start thread cut from the thread cut start shift angle after phase Z has been detected once.
1: Start thread cut from the thread cut start shift angle, independently of phase Z detection.

### 16 Machine Parameters

**bit0: Command format 1**
Select the command format for the fixed cycle for compound lathe.
- 0: Conventional format
- 1: MITSUBISHI CNC special format
  (1 block command method)

**bit1: Command format 2**
Select the command format for the lathe fixed cycle.
- 0: Conventional format
- 1: MITSUBISHI CNC special format

**bit2: Command format 3**
Select the command format for the fixed cycle for drilling.
- 0: Conventional format
- 1: MITSUBISHI CNC special format

**bit3: F-command unit 2 (for L system only)**
Specify the unit to be used if a synchronous feed or thread cutting lead command contains no decimal point.
- 0: Type 1 (conventional specifications) or Type 2
  - Type 1 or Type 2 is selected by the parameter "#1271 ext07/bit2".
- 1: Type 3
  - F command 0.01 mm/rev, 0.0001 inch/rev
  - E command
    - Sync feed (corner chamfer/corner R feedrate) 0.01 mm/rev, 0.0001 inch/rev
    - Thread cut (fine thread cut lead) 0.0001 mm/rev, 0.000001 inch/rev

(Note) Type 3 is independent of the input unit.

**bit0: G code type**
Select the high-speed high-accuracy G code type.
- 0: Conventional format (G61.1)
- 1: MITSUBISHI CNC special format (G08P1)

**bit2: Enable synchronous tapping per minute**
Select whether to enable feed per minute with the F command of synchronous tapping cycle.
- 0: Disable (Command in pitch regardless of "G group 5" modal)
- 1: Enable (Follow "G group 5" modal)

**bit4: Enable address K to specify the repetition count in G76/G87**
Select whether to enable address K to be used for specifying the repetition count in G76/G87 command.
- 0: Disable
- 1: Enable

When 1 is set in this parameter with #1271 ext07/bit1 (Specifying repetition count with address K) set to 1, the address K given to G76/G87 is treated as the number of repetitions.
**bit0: Inverse tangent (ATAN) command format**

Select the command format of ATAN operation.

- **0:** Format 1: Either the ratio of two sides or the whole expression is enclosed in square brackets "[]".
  
  ATAN[#k] or ATAN[#j/#k]

- **1:** Format 2: Two sides are enclosed in "[]" respectively and also divided by a slash "/".
  
  ATAN[#j]/[#k]

**bit1: Range of inverse tangent (ATAN) calculation result**

Select the range of calculation result for inverse tangent (ATAN) to be applied when Format 2 is selected for inverse tangent (ATAN) command (when #1269/bit0=1).

- **0:** -180 to 180 deg
- **1:** 0 to 360 deg

**bit4: Switch chamfering operation**

Select the operation to be performed when the cycle start point is exceeded as a result of chamfering in a thread cutting cycle.

- **0:** Output a program error (P192).
- **1:** Stop chamfering upon arrival at the cycle start point, and then move to the end point of the thread cutting block at a rapid traverse rate.

**bit5: Coordinate rotation angle without command (for L system only)**

Select the operation when there is no rotation angle command R for the coordinate rotation.

- **0:** Use the previously commanded value (modal value). If the command is the first issued command, the rotation angle will be 0°.
- **1:** Use the set value in 

**bit6: Switch continuous thread cutting Z phase wait operation**

Select when to start the 2nd block thread cutting when there is a command with no movement (MST command, etc.) between the thread cutting blocks.

- **0:** Wait for the spindle's single rotation synchronization signal before starting the movement.
- **1:** Start movement without waiting for the spindle's single rotation synchronization signal.

**bit7: Handle C axis coordinate during cylindrical interpolation**

Specify whether to keep the rotary axis coordinate as before the cylindrical interpolation start command is issued during the cylindrical interpolation.

- **0:** Not keep
- **1:** Keep
bit0: Mirror image operation

Select the type of mirror image operation.

0: Type 1
- The program mirror image, external mirror image, and parameter mirror image are exclusive to each other.
- An incremental command moves the image to the position indicated by the travel amount with the sign inverted.

1: Type 2
- Mirror image operation is enabled when the program mirror image (G51.1) command is issued or when the external signal or parameter is ON.
- An incremental command moves the image to the position determined by applying the mirror image to the absolute program coordinates.

bit1: Address specifying fixed cycle repetition count (for M system only)

Select the address that specifies the fixed cycle repetition count.

0: Address L only (Default)
1: Addresses K and L

If addresses K and L are specified simultaneously, the data at address K will be used for operation.

bit2: F-command unit

(M system)
Specify the unit to be used if a thread cutting lead command contains no decimal point.

- This setting is independent of the input unit.

0: Type 1 (conventional specifications)
- F1: 1 mm/rev, 1 inch/rev

1: Type 2
- F1: 0.01 mm/rev, 0.0001 inch/rev

(L system)
Specify the unit to be used if a synchronous feed or thread cutting lead command contains no decimal point.

0: Type 1 (conventional specifications)
- [Input unit B] F1: 0.0001 mm/rev, 0.000001 inch/rev
- [Input unit C] F1: 0.00001 mm/rev, 0.0000001 inch/rev

1: Type 2
- F1: 0.0001 mm/rev, 0.000001 inch/rev

* Type 2 is independent of the input unit.

bit3: G-code group for unidirectional positioning (for M system only)

Select the G-code group for unidirectional positioning.

0: Unmodal G code (group 00)
1: Modal G code (group 01)

Related parameter: "#8209 G60 Shift" (Set the last positioning direction and distance for each axis applicable when the unidirectional positioning command is issued.)

bit4: Operation by independent G40 command

Select whether the radius compensation vector is canceled by the independent G40 command.

0: Type 1 (conventional specification) (Default)
The radius compensation vector will be canceled by the independent G40 command.

1: Type 2
The radius compensation vector won't be canceled by the independent G40 command: it will be canceled by the next travel command for the radius compensation plane.
bit5: Cut start position (for L system only)
Select the position from where cutting begins in a fixed cycle for compound lathe.
0: Conventional specification (Default)
The cut start position will be determined by the final shaping program.
1: Extended specifications
Determined from the cycle start point.

bit6: Nose R compensation (for L system only)
Select whether to apply nose R compensation for shapes in a rough cutting cycle.
0: Conventional specification (Default)
The shape after nose R compensation in the final shaping program will be used as rough cutting shape.
(when the nose R compensation for the final shaping program).
1: Extended specifications
The shape without nose R compensation in the final shaping program will be used as rough cutting shape.

bit7: Cut amount (for L system only)
Select the operation to be performed when the program-specified cut amount exceeds the cut amount of the final shaping program.
0: Conventional specification (Default)
A program error will occur when the program-specified cut amount exceeds the cut amount of the final shaping program.
1: Extended specifications
Rough cutting will be performed by one cut when the program-specified cut amount exceeds the cut amount of the final shaping program.

</tbody>
</table>
bit0: Switch ASIN calculation results range
Select the notation system for operation result of ASIN.
0: Do not switch minus figures to positive figures. (-90° to 90°)
1: Switch minus figures to positive figures. (270° to 90°)

bit1: Switch system variable unit
Select the unit for the system variable #3002 (cycle start operation time).
0: 1 ms unit
1: 1 hour unit

bit2: Switch G71, G72, G73 cutting direction judgment
Select the cutting direction when the longitudinal rough cutting cycle (G71), face rough cutting cycle (G72) or closed loop cutting cycle (G73) is commanded.
0: Conventional specification
   Determined according to the finished shape program.
1: Extended specifications
   Determined according to the finishing allowance and cutting allowance commanded in the program.

bit3: Facing turret mirror image coordinate value type
Select how to show the workpiece coordinate values of the axis for which the facing turret mirror image is valid.
0: Movements in the workpiece coordinate system are in the same direction as those in the workpiece machine coordinate system.
1: Movements in the workpiece coordinate system are in the opposite direction to those in the workpiece machine coordinate system.

bit4: Facing turret mirror image valid axis selection
Select the axis for which the facing turret mirror image is valid.
0: Fixed to 1st axis.
1: Determined according to the plane selected when the facing turret mirror image is commanded.

bit2: M98 sequence No. address selection
Select which address to use for calling a sequence No. in a sub program under sub program control (M98/ M198).
0: Address H is used for specifying the sequence No.
1: Address Q is used for specifying the sequence No.

bit4: Optional block skip operation changeover
Select the optional block skip operation.
0: Enable or disable optional block skipping in the middle of a block according to the setting of "#1226 aux10/bit1".
1: Enable optional block skipping at the top and in the middle of a block.
   Note that a slash "/" on the right-hand side of equation or that in an equation between [ ] is handled as division operator.

bit5: Use of G54Pn for selecting extended workpiece coordinate system
Select whether to use G54Pn as a command for selecting an extended workpiece coordinate system.
0: Not use G54Pn as a command for selecting an extended workpiece coordinate system
1: Use G54Pn as a command for selecting an extended workpiece coordinate system
When 1 is set in this parameter, G54Pn is treated in the same manner as G54.1Pn.

bit7: Word range check
Select whether to check that the operation expression of the word data in the program is enclosed in brackets [ ] when the machine program is executed.
This check is also applied to the 08000 to 09999 and the machine tool builder macro program.
0: Not check
1: Check
### Bit0: Tool life management II count type 2 (default: 0)
Select how and when cumulative number of mountings or cuttings will be incremented in tool life management II. The condition to output "tool group life over (TGLO)" signal will be changed accordingly.

- **0**: Type 1 (default)
  - Counts up when the spindle tool is used for cutting. TGLO signal will be output when the last tool in selected group is judged as expired.
- **1**: Type 2
  - Counts up by one for a tool used or mounted in a program at the time of resetting. TGLO signal will be output when any of tool groups has reached its lifetime limit.

### Bit1: Tool life management II life prediction
Select whether to enable tool life prediction function in tool life management II.

- **0**: Disabled
- **1**: Enabled

### Bit2: Tool life management II life end signal timing
Select the timing at which tool life prediction signal is output in tool life management II.

- **0**: Output only when the \(["life value" - "used value"]\) matches the remaining life. \(["life value" - "used value"] = "remaining life"
- **1**: Output when the \(["life value" - "used value"]\) is less than the remaining life. \(["life value" - "used value"] \leq "remaining life"

### Bit3: Tool life management II life end signal tool
Select the tool for which the tool life prediction signal is output in tool life management II.

- **0**: Output the signal tool by tool.
- **1**: Output the signal at the last tool in the group.

### Bit4: Tool life management II count changeover (For M system only)
Select the tool life count method and its timing.

- **0**: Conforms to ext13/bit0 setting.
- **1**: When ext13/bit0 is set to "0":
  - Counts up by one for a tool used or mounted in a program at the time of resetting.
  - Follow the setting of "Method (Mthd)" on Tool life screen.

The output condition of "tool group life over" signal conforms to ext13/bit0.
<table>
<thead>
<tr>
<th>(PR)</th>
<th>#1278</th>
<th>ext14</th>
</tr>
</thead>
</table>

**bit0: Program restart method selection**
Select the program restart type.
- 0: Restart type A
- 1: Restart type B

**bit1: Change miscellaneous command completion method**
Select the complete signal and completion condition.
- 0: Normal method
  - Complete at the falling edge of M function finish 1 signal (FIN1) or rising edge of M function finish 2 (FIN2).
- 1: High-speed method
  - Complete when High-speed M finish signal (MFIN1 to 4, SFIN1 to 6, TFIN1 to 4 or BFIN1 to 4) reaches the same logical level as the strobe signal.

**bit2: Change areas for stored stroke limit I**
Enable/Disable change of the areas for stored stroke limit I.
- 0: Disable
- 1: Enable

**bit3: Select M30 rewinding operation**
Select the operation when the miscellaneous function completed signal (FIN) is returned to M30.
- 0: Not carry out automatic rewinding
- 1: Carry out automatic rewinding

**bit4: Select M02 rewinding operation**
Select the operation when the miscellaneous function completed signal (FIN) is returned to M02.
- 0: Not carry out automatic rewinding
- 1: Carry out automatic rewinding

**bit5: M code output during high-speed simple program check**
Select whether to enable M code output during high-speed simple program check.
The M codes to be output are those specified by "#1451 M[M031-000](SMLK)" to "#1466 M[M511-480](SMLK)".
- 0: Disable
- 1: Enable

**bit7: Operation for circular radius error at perfect circle command**
Select the operation to be performed when a perfect circle command is given and there is a difference between the start point and end point radii, but no difference between the start point and end point angles.
- 0: Linear interpolation from the start to the end point
- 1: Spiral interpolation from the start to the end point
bit0: Part system synchronization method
Select the part system synchronization method.
0: If one part system is not in the automatic operation, the synchronization command will be ignored and the next block will be executed.
1: Operate according to the "waiting ignore" signal.
   If the "waiting ignore" signal is set to "1", the synchronization command will be ignored. When set to "0", synchronization will be applied.

bit1: Interrupt amount during machine lock
Select when to cancel the interruption amount during machine lock.
0: Canceled when resetting
1: Canceled during manual reference position return (not when resetting)

bit2: Selection of cutting start interlock target block
Select whether to enable the cutting start interlock for successive cutting blocks.
0: Enable
1: Disable

bit4: Dry run OFF during thread cutting
Select whether to enable or disable dry run during thread cutting.
0: Enable dry run
1: Disable dry run

bit5: Cancel G92 shift distance
Select whether to clear the G92 (coordinate system setting) shift distance when the manual reference position is reached.
0: Not clear
1: Clear

bit6: Enable single block stop at middle point
Set whether to enable/disable single block stop at the middle point of G28/G29/G30.
0: Disable single block stop
1: Enable single block stop

bit7: Retain G52 at manual reference position return
Select whether to retain the local coordinate system setting (G52) at the time of manual reference position arrival. This parameter is enabled when #1279 ext15/bit5 is 1.
0: Not retain (Cancel)
1: Retain
bit0: I/F per axis during mixed control (cross axis control)
Select how to handle the following PLC interface for axes interchanged with the mixed control (cross axis control).
- Mirror image
- Manual/automatic interlock
- Manual/automatic machine lock
  0: Follows axis configuration before the mixed control (cross axis control).
  1: Follows axis configuration after the mixed control (cross axis control).

(Example)
The device No. of automatic interlock (+) for X1 will be as follows when the mixed control (cross axis control) is executed with the 1st axis (X1) in the 1st part system and 1st axis (X2) in the 2nd part system.
  When "0" is set: YA60 (interface for 1st axis in 1st part system)
  When "1" is set: YA68 (interface for 1st axis in 2nd part system)
(Note) If the number of axes in the part system changes with the mixed control (cross axis control), the interface of the target axis may change when this parameter is set to "1".

bit1: Mixed control (cross axis control) cancel with reset
Select whether to cancel the mixed control (cross axis control) when reset is applied.
  0: Cancel.
  1: Not cancel.

bit2: Interchange coordinate position display
Select whether to display interchanged (or moved) coordinate positions in the mixed control (cross axis control).
This setting will be followed not only when the axes are interchanged but also when the axes are moved.
  0: Display interchanged (or moved) coordinate positions.
  1: Display coordinate positions without being interchanged (nor moved).

(Example)
When 1st part system’s C axis is moved to 2nd part system with a 1st part system (X, Z, C, Y) and 2nd part system (X, Z) configuration:
  1st part system: X, Z and Y coordinate positions are displayed.
  2nd part system: X, Z and C coordinate positions are displayed.

bit3: Reset operation for synchronization/superimposition control
Not used. Set to "0".

bit4: Mixed control (cross axis control) command method
Select how to command mixed control (cross axis control).
  0: Use PLC interface signal for mixed control
  1: Use G command for mixed control

bit5: Command method of control axis synchronization between part systems
Select how to command the control axis synchronization between part systems.
  0: Use PLC I/F.
  1: Use G command.

bit6: Interchange machine position display
Select whether to display interchanged (or moved) machine positions in the mixed control (cross axis control).
This setting will be followed not only when the axes are interchanged but also when the axes are moved.
(Note 1) This parameter is enabled when "#1280 ext16/bit2 (Interchange coordinate position display)" is "0".
  0: Display interchanged (or moved) machine positions.
  1: Display machine positions without being interchanged (nor moved).
bit7: Control axis superimposition command method
Not used. Set to "0".

bit0: Switch manual high-speed reference position return in synchronous control
Select the movement of synchronized axes in manual high-speed reference position return.
0: Master and slave axes start the return synchronizing. Even when one axis stops at its reference position, the other axis continues moving until it reaches its reference position.
1: Master and slave axes start the return synchronizing, and when the master axis stops at the reference position, the slave axis also stops. Thus, the relative position of the master and slave is kept.

bit1: Selection of additional tool offset axis (for L system only)
Select axis to carry out the additional axis' tool compensation function.
0: Follow the setting of #1520 Tchg34.
1: The axis specified by #1027 Base_J is used as the 3rd compensation axis.

bit3: Synchronous control operation setting
Select whether or not the positioning of slave axis automatically aligns with that of master axis when the axis subject to synchronous control is changed from servo OFF to servo ON.
0: The positioning does not automatically align.
1: The positioning automatically aligns.

bit5: High-speed synchronous tapping valid
Select whether to enable the high-speed synchronous tapping.
0: Disable
1: Enable

bit6: Compensation method for external machine coordinate system/ball screw thermal expansion during synchronization
Select the method of how to compensate the slave axis when compensating external machine coordinate system or ball screw thermal expansion during synchronization control. The setting of this parameter will be validated when you select synchronous operation method by the synchronization control operation method signal.
0: Master axis and slave axis are independently compensated.
1: Master axis' compensation amount is applied to slave axis.

bit7: Switch automatic high-speed reference position return in synchronous control
Select the movement of synchronized axes in automatic high-speed reference position return.
0: Master and slave axes start the return synchronizing, and when the master axis stops at the reference position, the slave also stops. Thus, the relative position of the master and slave is kept.
1: Master and slave axes start the return synchronizing. Even when one axis stops at its reference position, the other axis continues moving until it reaches its reference position.
### Machine Parameters

**bit1: Condition of the reference position reached signal in synchronous control**

This parameter switches only conditions of a master axis’s reference position return reached signal in synchronous operation. A slave axis's signal is output when the slave axis reaches the reference position coordinate.

- 0: A master axis's reference position reached signal is output only when both of the master and slave axes reach the reference position coordinate by a reference position return.
- 1: A master axis's reference position reached signal is output when the master axis reaches the reference position coordinate.

**bit3: Index table clamp type**

Set the clamp type of the index table.

- 0: Type A: Clamped when an unclamp command turns OFF.
- 1: Type B: Clamped when a clamp command turns ON.

**bit5: Automatic correction of synchronization offset at power ON**

The slave axis position is automatically corrected so that the synchronization offset before having turned the power OFF the last time can be restored at power ON.

(Note1) This parameter is enabled when the parameter "#1281 ext17/bit3 (Synchronous control operation setting)" is set to "1".

- 0: Disable
- 1: Enable

**bit6: Reset type at emergency stop cancel**

Select the type of reset to be applied when emergency stop is cancelled.

- 0: Reset 1
- 1: Reset 2

**bit7: Functional operation inhibition during write of servo parameters**

Select whether to inhibit functional operation during write of servo parameters.

- 0: Inhibit functional operation with an alarm displayed
- 1: Give priority to functional operation with write of servo parameters suspended

(Note) This parameter can inhibit a start of the following four functions.

- Spindle/C axis changeover
- Speed observation mode signal ON
- High-speed synchronous tapping
- Start of PLC indexing axis

**bit0: Spindle speed clamp check**

Select whether to check the spindle speed clamp under the constant surface speed control.

- 0: Check the spindle speed clamp.
- 1: Not check the spindle speed clamp.

(Note) This parameter is enabled when the parameter "#1146 Sclamp" is set to "1".

**bit1: Spindle control selected in response to Z83 (NC started during SP rotation)**

Select whether to force-stop the spindle when the alarm (Z83 0001) occurs.

- 0: Not force-stop the spindle
- 1: Force-stop the spindle

**bit6: Automatic operation handle interruption during inclined surface machining**

Select whether to enable the automatic operation handle interruption function during inclined surface machining.

- 0: Disable
- 1: Enable
bit0: Multi-part system program management

Select whether to use multi-part system program management.

0: Not use

1: Use

(Note) When this parameter's value is changed, the power must be turned OFF and ON, and the system formatted. Two or more part systems from [1] to [4] need to be set to "1" in "#1001 SYS_ON". Otherwise this parameter will be disabled even though set to "1".

bit1: Program search type switch

Select how to search a program to operate.

0: Operation search is performed in the selected part system.

1: Operation search is performed for all part systems.

(The program No. will be common to all part systems.)

bit2: Multi-part system program generation and operation

Select whether to perform the following processes for all the part systems or for each part system separately in multi-part system program management: newly create, delete or rename the machining programs in NC memory (including MDI program and machine tool builder macro program) or transfer, compare, merge the programs between NC memory and other device.

0: Perform these processes for the programs in all the part systems.

If no subprogram contents are found by the subprogram call during automatic operation, the program will be searched for and executed from $1.

1: Perform these processes for the programs in the selected part system.

bit5: Selection of multi-part system program input/output method

Select whether to perform the transfer from NC memory to other device for all the part systems or for each part system separately in multi-part system program management.

0: Output the designated programs for all the part systems.

(The programs output from NC memory contain the system delimiter $ marks.)

1: Output the programs of only the selected part system.
bit1: Inclined surface coordinate display
- 0: Display the position which includes tool length offset.
- 1: Display the position on the program which excludes tool length offset.

bit2: Inclined surface coordinate display (for M system only)
- 0: Display the position which includes tool radius compensation.
- 1: Display the position on the program which excludes tool radius compensation.

bit4: Relative coordinate display
(M system)
- 0: Display the position which includes tool length offset.
- 1: Display the position on the program which excludes tool length offset.
(L system)
- 0: Display the position which includes tool shape compensation.
- 1: Display the position on the program which excludes tool shape compensation.

bit5: Relative coordinate display
(M system)
- 0: Display the position which includes tool radius compensation.
- 1: Display the position on the program which excludes tool radius compensation.
(L system)
- 0: Display the position which includes nose R compensation.
- 1: Display the position on the program which excludes nose R compensation.

bit6: Absolute coordinate display
Select how coordinate values are displayed when absolute coordinate display is selected ("#1221 aux05/bit0"=**1**).
(M system)
- 0: Display the position which includes tool shape compensation.
- 1: Display the position on the program which excludes tool shape compensation.
(L system)
- 0: Display the position which includes nose R compensation.
- 1: Display the position on the program which excludes nose R compensation.

bit7: Absolute coordinate display
Select how coordinate values are displayed when absolute coordinate display is selected ("#1221 aux05/bit0"=**1**).
(M system)
- 0: Display the position which includes nose R compensation.
- 1: Display the position on the program which excludes nose R compensation.
(L system)
- 0: Display the position which includes tool shape compensation.
- 1: Display the position on the program which excludes tool shape compensation.

bit0: MDI program clear
Select whether to clear the MDI programs when MDI operation ends, the power is turned ON again, reset is input, or emergency stop is canceled.
- 0: Not clear
- 1: Clear (save only % programs).

bit2: Restore previous program before external search by NC reset
Select whether to restore the previous program before external search when operation is finished, power is turned OFF and ON, NC reset is input or Emergency stop is cancelled.
- 0: Not restore the previous program before external search
- 1: Restore the previous program before external search

bit3: Restore previous program before external search by Program restore signal
Select whether to restore the previous program before external search when Program restore signal is input.
- 0: Not restore the previous program before external search
- 1: Restore the previous program before external search
bit0: Tool radius compensation switch corner judgment method (nose R compen.)

Select the criterion to execute the outer rounding at the small corner in tool radius compensation.

(L system)
0: The corner angle is 0°; linear-linear; G02-G03/G03-G02; the radius is the same. (Conventional method)
1: The corner angle is 1° or smaller; linear-linear; G02-G03/G03-G02; the radius is almost the same. (Method for rounding minute corner angle)

(M system)
0: The corner angle is 1° or smaller; linear-linear; G02-G03/G03-G02. (Conventional method)
1: The corner angle is 1° or smaller; linear-linear; G02-G03/G03-G02; the radius is almost the same. (Method for rounding minute corner angle)

bit2: Variable command: Reset operation for tool function T code (#4120/#4320)

Select how reset operation affects the address T’s modal information (#4120/#4320).

0: Clear the information
1: Retain the information

bit1: Address F given in sync tap cycle

Select the specification of address F given in synchronous tapping cycle.

0: The value given to address F in synchronous tapping cycle is treated as the feed rate. Feed command follows the setting of "#1268 ext04/bit2 Enable synchronous tapping per minute". F modal status is unchanged.
1: Follow the G code group 5 modal status, irrespective of the setting of "#1268 ext04/bit2 Enable synchronous tapping per minute". The F modal value given in the program is treated as the feed rate.

bit5: Selection of sub program call operation in fixed cycle mode

Select the operation to be carried out when sub program call (M98/M198) and either an axis address or address R (for hole drilling cycle) are given in one block during fixed cycle for drilling or turning machining.

0: Not execute fixed cycle operation in the sub program call block. Sub program call is executed after travelling to the position specified by the axis address in modal status of G code group 01. Neither the axis address nor address R affects the subsequent fixed cycle operation.
1: Execute fixed cycle operation in the sub program call block before executing the sub program call. The axis address or address R is treated as the fixed cycle argument.

bit0: Synchronous feed in milling

Select whether to enable synchronous feed in milling interpolation, cylindrical interpolation or polar coordinate interpolation mode.

0: Disable
1: Enable

bit1: Enabling N0 command

Select how to handle a command of sequence number zero (N0).

0: N0 causes an error.
1: N0 is ignored (causes no error).
| (PR) | #1298  | ext34 | Not used. Set to "0". |
| (PR) | #1299  | ext35 | Not used. Set to "0". |
| (PR) | #1300  | ext36 |                          |

**bit0: Multiple spindle control II**
Select multiple spindle control I or II.
- 0: Multiple spindle control I (L system only)
- 1: Multiple spindle control II (select from ladder)

**bit2: Part system-based spindle clamp speed management**
Select how to manage the spindle clamp speed data.
- 0: Manage the data of all part systems collectively
- 1: Manage the data of each part system individually

**bit7: Spindle synchronization command method**
Select the spindle synchronization command method.
- 0: Spindle synchronization with PLC I/F
- 1: Spindle synchronization with machining program

(Only the even number)
(Within backup area)

Set the head No. of the R register used as the compensation amount save area during fixed compensation amount method.
When the first number is an odd number, the operation message "Setting error" appears.
When the value overlaps with the chopping control data area, the operation message "Setting error" appears.

Set the time taken for the drive section’s main power to be shut-off when the confirmation of all the axes’ stop failed after the emergency stop state.
The contactor shut-off signal is output as soon as all the axes are confirmed stopped if the confirmation is done prior to the set time.
When there is no safety observation option or "0" is set, the shut-off time will be 30 (s).

---Setting range---
0 to 60 (s)

When safety observation is executed, set the remote I/O device to input the contactor’s auxiliary b contact signal used for the contactor weld detection.
If "0" is set, weld detection will not be executed.
Thus, "X0" cannot be used as contactor weld detection device.

---Setting range---
0000 to 01FF (HEX)
When safety observation is executed, set the remote I/O device to input the contactor's auxiliary b contact signal used for the contactor weld detection.

If "0" is set, weld detection will not be executed.

Thus, "X0" cannot be used as contactor weld detection device.

---Setting range---

0000 to 01FF (HEX)

Select whether to restrain the lost motion compensation in handle mode.

0: Not restrain
1: Restrain

Select the start cycle of PLC main processing program.
When wait time until the next start cycle from 1 scan end is long, the wait time can be shortened by adjusting the start cycle.

-1: Low-speed mode (2 fold)
0: Standard mode
1: High-speed mode 1 (1/2 fold)
2: High-speed mode 2 (1/4 fold)

(Note 1) When the high-speed mode is selected, the fine segment processing performance may degrade due to the increased processing load of the system.

(Note 2) When the high-speed mode 2 is selected, the scan time should be 1/4 or less of the base interruption cycle as a standard. If the standard is exceeded, the update of all the DI/DOs in refresh cycle may not be able to be performed.

(Note 3) If the number of RIO stations connected is large, the update of all the RIO in refresh cycle may not be able to be performed. Make the setting according to the number of stations per RIO channel.

Select the acceleration/deceleration mode in jog feed, incremental feed and manual reference position return (when rapid traverse signal OFF).
0: Acceleration/Deceleration for rapid traverse
1: Acceleration/Deceleration for cutting feed

Select whether the #400-level variables are used as machine tool builder macro variables or as common variables.

0: #400 to #449 are not available; #450 to #499 are used as machine tool builder macro variables.
1: #400 to #499 are used as common variables

(Note) 700 sets or more of common variables are required for using #400 to #499 as common variables. If this parameter is set to "1" while the number of common variables is set to less than 700, this parameter setting will be regarded as "0".

Not used. Set to "0".

When safety observation is executed, set the remote I/O device to input the contactor's auxiliary b contact signal used for the contactor weld detection.

If "0" is set, weld detection will not be executed.

Thus, "X0" cannot be used as contactor weld detection device.

---Setting range---

0000 to 01FF (HEX)
When safety observation is executed, set the remote I/O device to input the contactor's auxiliary b contact signal used for the contactor weld detection.

If "0" is set, weld detection will not be executed.
Thus, "X0" cannot be used as contactor weld detection device.
---Setting range---
0000 to 01FF (HEX)

Set a period of time by which alarm display is delayed.
Set a time between when an operation alarm occurs and when the alarm display and signal turn ON.
When set to "0", the alarm display and signal will turn ON immediately after the alarm occurrence.
When set to "-1", the alarm display and signal will not turn ON after the alarm occurrence.
Target alarms:
M01 External interlock axis exists 0004
M01 Internal interlock axis exists 0005
M01 Sensor signal illegal ON 0019
M01 No operation mode 0101
This parameter is disabled if "#1343 DlyReg" is set.
---Setting range---
-1 to 30000 (ms)

Set the head No. of the R register to be used for delayed display of an operation alarm.
If any R register outside the user area is specified, delayed alarm display is disabled.
If this parameter is set, the setting of #1342 AlmDly is disabled.
When not using, set to "0".
---Setting range---
0 to 29899

Set a remote I/O device to input the door sensor signal to detect Door 1's status in safety observation.
When "0" is set, the door is always detected to be open.
Thus, "X0" cannot be used as Door 1 switch input device.
---Setting range---
0000 to 02FF (HEX)

Set a remote I/O device to input the door sensor signal to detect Door 2's status in safety observation.
When "0" is set, the door is always detected to be open.
Thus, "X0" cannot be used as Door 2 switch input device.
---Setting range---
0000 to 02FF (HEX)

Set a device of an output remote I/O device to control contactor in safety observation.
When set to "0", contactor shutoff output is disabled.
Thus, "Y0" cannot be used as contactor shutoff output device.
---Setting range---
0000 to 01FF (HEX)
Set a period of time until emergency stop is issued when a contactor does not operate even though contactor shutoff output 1 is output.
If the vertical axis drop prevention function is used, set a value bigger than the vertical axis drop prevention time (SV048 EMGr). When "0" is set, the contactor operation check will be disabled.

---Setting range---
0 to 30000 (ms)

Select the acceleration/deceleration type of auxiliary axis in PLC axis indexing.
0: Acceleration/deceleration with constant time
1: Acceleration/deceleration with a constant angle of inclination

Select the manual speed command type.
0: Manual speed command
The axis travels at the handle/jog feed rate.
Reverse run is performed for each part system independently of the other ones.
1: Manual speed command 2
In a multi-part system configuration, the axis travels at the handle/jog feed rate multiplied by the ratio of each part system's program command speeds.
When the block start point is reached in reverse run in any of the part systems, the axes in the other part systems stop simultaneously.

Select the operation when G31 is commanded in more than one part system.
(Note) When set to "1", the skip coordinate position will always be "0" whether G31 is commanded in a single part system or in one part system of a multi-part system.
Set to "0" when using G31 command for measurement etc.
0: Carry out G31 command in one part system, while the G31 is kept in an interlocked state in the other systems.
1: Carry out G31 command simultaneously in more than one part system.
Note that the skip coordinate is not read and so the skip coordinate value will be 0.

Set the maximum override value to be applied to the cutting feed that is in constant inclination acceleration/deceleration.
When the setting of this parameter is between 0 and 99, the override value is handled as 100% even though the specified cutting feed override is over 100%.

---Setting range---
0 to 300 (%)
### 16 Machine Parameters

**#1371 PwrIntegIntvl** Power consumption accumulation interval

Specify the intervals of accumulating power consumption to create the history. The accumulated power consumption history can be obtained according to this parameter along with "#1392 StartTimelIPC" (Power consumption accumulation start time). When 0 is set, power consumption is not accumulated.

---Setting range---

0 to 999 (hr)

**#1372 DrvBasePwr** Fixed drive system power consumption

Specify the fixed power consumption of the drive system. This value is used for calculating the power consumption.

---Setting range---

0 to 99999999 (W)

**#1373 mstpssc Multi-step speed monitor enabled**

Enable the multi-step speed monitor.

- 0: Disable the multi-step speed monitor
- 1: Enable the multi-step speed monitor

* When enabling the multi-step speed monitor, setting values for SV238, SV239, SP238 and SP239 will be ignored.

**#1379 S_Sig3 Safety observation signal device 3**

Set the remote I/O device to input the observation speed change signal 3 during executing the safety observation function. When set to "0", there is no observation speed change signal input. Therefore "X0" cannot be used as safety observation signal device.

---Setting range---

0000 to 02FF (HEX)

**#1389 G1SmthChk Smoothing check method in cutting block**

Select whether to apply smoothing check method to a cutting block for deceleration check, when deceleration check method is selected individually for G0 and G1 (when "#1306 InpsTyp" = 1).

- 0: Follow the setting of Aux07/bit1
- 1: Apply smoothing check method

**#1390 BackUSBUseNum Number of backside USB ports occupied**

Specify the number of the display's rear USB ports occupied by a machine tool builder. Using this setting the control determines the drive to be used for the front SD and USB memory.

(Note) This parameter is enabled for a Windows-based display of M800W/M80W.

---Setting range---

0 to 6

**#1391 User level protect Enable Data protection by user's level**

Enable the function of Data protection by user's level.

- 0: Use a machine user password to switch the protection of each operation (same as the conventional models)
- 1: Switch the protection according to the protective levels (0 to 7) specified for each operation through the protection setting screen

(Note) You are authorized to change this parameter from 1 to 0 only if your operation level is the same or higher than that of "Available level" on the protection setting screen.

**#1392 StartTimelIPC Power consumption accumulation start time**

Specify when to start accumulating power consumption to create the history. The accumulated power consumption history can be obtained according to this parameter along with "#1371 PwrIntegIntvl" (Power consumption accumulation interval).

---Setting range---

0 to 23 (o'clock)
Specify the efficiency for calculating power consumption.
This value is used for calculating the drive system power consumption.
When 0 is set, the efficiency is treated as 70 (%).
If the drive system power consumption computed by the NC is different from that measured by a measuring device, this parameter is used to adjust the drive system power consumption of the NC.

---Setting range---
0 to 100 (%)

(PR) #1395 H1_pno 1st handle selection

Specify the connection destination of the 1st handle.
bit0 to bit3: Connection channel
bit4 to bit7: Handle-connected CNC CPU module

Setting value
0001: Host CNC CPU 1CH
0002: Host CNC CPU 2CH
0003: Host CNC CPU 3CH
0031: CNC CPU No. 2 1CH
0032: CNC CPU No. 2 2CH
0033: CNC CPU No. 2 3CH
0041: CNC CPU No. 3 1CH
0042: CNC CPU No. 3 2CH
0043: CNC CPU No. 3 3CH
0051: CNC CPU No. 4 1CH
0052: CNC CPU No. 4 2CH
0053: CNC CPU No. 4 3CH

(Note 1) When the specified destination is not implemented, handle movement is not performed.
(Note 2) When all the "H1_pno" to "H9_pno" are set to "0000", handles are automatically allocated.
In case of arbitrary assignment, set "0000" for the handles which have not been assigned yet.
(Note 3) The values set in bit8 to bitF are ignored.

---Setting range---
0x0000 to 0xFFFF

(PR) #1396 H2_pno 2nd handle selection

Specify the connection destination of the 2nd handle.
Refer to "#1395 H1_pno" (1st handle selection) for further details.

(PR) #1397 H3_pno 3rd handle selection

Specify the connection destination of the 3rd handle.
Refer to "#1395 H1_pno" (1st handle selection) for further details.
(Note) In case of using C80, refer to "#11746 H4_pno" to "#11751 H9_pno" for the 4th to 9th handle selection.

#1399 sp_filt Spindle's actual rotation speed filter

Specify the average filter scale factor for the spindle's actual rotation speed data.
If the scale factor increases, fluctuations in speed display are mitigated.
0: Standard setting
1: 0.5-fold
2: 1-fold
3: 2-fold
4: 4-fold
5: 8-fold
### #1401 M_mode M command operation selection

Select the M command operation.

(Note) Register M codes in the special operation registration M codes (#1411 to #1418).

- 0: Not wait for the completion of registered M codes, but wait for the completion of the other M codes
- 1: Wait for the completion of registered M codes, but not wait for the completion of the other M code

### #1402 S_mode S command completion method selection

Select the S command completion method.

- 0: Wait for the complete signal from PLC
- 1: Not wait for the complete signal from PLC

### #1403 T_mode T command completion method selection

Select the T command completion method.

- 0: Wait for the complete signal from PLC
- 1: Not wait for the complete signal from PLC

### #1404 M2_mode 2nd miscellaneous command completion method selection

Select the 2nd miscellaneous command completion method.

- 0: Wait for the complete signal from PLC
- 1: Not wait for the complete signal from PLC

### #1405 M_mode(SMLK) M code output (during high-speed simple program check)

Select the M code output method to be applied during high-speed simple program check.

- 0: Output the M codes registered in #1449 to #1464 M[M511-000](SMLK), but not output unregistered M codes. M512 or subsequent M codes are not output.
- 1: Output the M codes unregistered in #1449 to #1464 M[M511-000](SMLK), but not output those registered. M512 and subsequent M codes are all output.

### #1406 S_mode(SMLK) S code output (during high-speed simple program check)

Select the S code output method to be applied during high-speed simple program check.

- 0: Not output S code
- 1: Output S code

### #1407 T_mode(SMLK) T code output (during high-speed simple program check)

Select the T code output method to be applied during high-speed simple program check.

- 0: Not output T code
- 1: Output T code

### #1408 M2_mode(SMLK) 2nd miscellaneous code output (during high-speed simple program check)

Select the 2nd M code output method to be applied during high-speed simple program check.

- 0: Not output 2nd M code
- 1: Output 2nd M code
Register an M code that needs special operation.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1411.
(Note) Note that the registered M code operation varies according to M_mode (#1401).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

Register an M code (32 to 63) that needs special operation.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1411.
(Note) Note that the registered M code operation varies according to M_mode (#1401).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

Register an M code (64 to 95) that needs special operation.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1411.
(Note) Note that the registered M code operation varies according to M_mode (#1401).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

Register an M code (96 to 127) that needs special operation.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1411.
(Note) Note that the registered M code operation varies according to M_mode (#1401).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

Register an M code (128 to 159) that needs special operation.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1411.
(Note) Note that the registered M code operation varies according to M_mode (#1401).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

Register an M code (160 to 191) that needs special operation.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1411.
(Note) Note that the registered M code operation varies according to M_mode (#1401).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.
### #1417 M_wait[M223-192] Special operation registration M code

Register an M code (192 to 223) that needs special operation.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1411.
(Note) Note that the registered M code operation varies according to M_mode (#1401).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

### #1418 M_wait[M255-224] Special operation registration M code

Register an M code (224 to 255) that needs special operation.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1411.
(Note) Note that the registered M code operation varies according to M_mode (#1401).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

### #1419 M_wait[M287-256] Special operation registration M code

Not used.

### #1420 M_wait[M319-288] Special operation registration M code

Not used.

### #1421 M_wait[M351-320] Special operation registration M code

Not used.

### #1422 M_wait[M383-352] Special operation registration M code

Not used.

### #1423 M_wait[M415-384] Special operation registration M code

Not used.

### #1424 M_wait[M447-416] Special operation registration M code

Not used.

### #1425 M_wait[M479-448] Special operation registration M code

Not used.

### #1426 M_wait[M511-480] Special operation registration M code

Not used.

### #1427 RT2AftG1 RT2: Enable switching of acce/dece time constant after G1 interpolation

Not used.

### #1428 RT2rst RT2: Enable changing acce/dece time constant back when NC is reset

Not used.

### #1431 Ax_Chg Selection of mixed control (cross axis control) or arbitrary axis exchange control

Choose which of the following controls to enable; Mixed control (Cross axis control) I, II or arbitrary axis exchange control.

- 0: Mixed control (Cross axis control) I or II
- 1: Arbitrary axis exchange control
### #1432 Ax_Chg_Spec

**bit0: Selection of alarm when axis exchange is disabled**

Select whether to issue an alarm or wait until the axis becomes exchangeable when axis exchange is disabled.

0: Wait until the axis becomes exchangeable when the axis declared in an axis exchange command is incapable of being exchanged.

* The parameter #1433 (G140TimeOut) determines the operation to be carried out during the waiting time.

1: Output the alarm (M01 1101) when the axis declared in an axis exchange command is incapable of being exchanged.

---

**bit1: Compensation cancel after arbitrary axis exchange**

Select whether to enable canceling of compensation after an arbitrary axis exchange.

0: Not cancel compensation after arbitrary axis exchange

1: Cancel compensation after arbitrary axis exchange

---

### #1433 G140TimeOut G140 timeout period

Specify a period of time to wait before outputting the alarm (M01 1101) when an axis declared in the axis exchange command is unexchangeable.

If the specified time elapses with the axis remaining unexchangeable, the alarm (M01 1101) is output. However, this alarm is cancelled and axis exchange is carried out once the axis becomes capable of being exchanged.

0 to 254: Period of time to wait before timeout (sec)

255: Wait until the axis becomes exchangeable without executing timeout check

(Notes) This parameter is enabled when the alarm is not caused by an axis' unexchangeable state (when #1432 Ax_Chg_Spec(bit0) = 0).

---Setting range---

0 to 254 (s)

255: No timeout

### #1434 G140Type2 G140 command type 2

Select which axis address(es) can be commanded under G140 (Arbitrary axis exchange) control.

0: The axis (or axes) specified in the G140 block can be commanded.

1: Not only the axis (or axes) specified in the G140 block but those unspecified in the block can also be commanded.

### #1435 crsman Manual interruption during cross machining

Select whether to enable manual interruption for an axis being under cross machining control.

0: Disable

1: Enable

### #1436 mstsyn Enable override for dwell and miscellaneous function time

Select whether to enable override for the dwell time and miscellaneous function time.

0: Disable (Override takes no effect.)

1: Enable (Override takes effect.)

### #1437 SBS2_Spec Selection of alarm when sub part system II start is disabled

**bit0: Selection of alarm when sub part system II start is disabled**

Select the type of operation to be carried out when the sub part system specified by G144 is incapable of being activated.

0: Wait until the system becomes capable of being activated

1: Output an alarm

**bit1: Sub part system control II: Reset type selection**

Select how to reset the sub part system control II.

0: Reset sub part system at the same time as main part system reset.

1: Not reset sub part system at the time of main part system reset.
### 16 Machine Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Setting</th>
</tr>
</thead>
</table>
| #1438 Ofs-SysAssign | Enable part system allocation of tool offset sets | Not used. Set to “0”.
| #1439 Tlife-SysAssign | Part system allocation of life management tools | Select the allocation method of the life management tools. 0: Automatic equal allocation 1: Arbitrary allocation The setting of “1” is enabled for a system configured with two or more part systems. When “1” is selected for a system configured with a single part system, all the life management tools of the system are allocated to the 1st part system.
| #1440 multi_sp_syn | Multiple spindle synchronization valid | Select whether to enable multiple spindle synchronization. 0: Disable multiple spindle synchronization. 1: Enable multiple spindle synchronization.
| #1441 Tcode_Method_Chg | T command method selection | Select the tool command method. 0: Tool life management II format 1: Tool function
| #1442 G0ol | Enable G00 rapid traverse block overlap | Select whether to enable the G00 rapid traverse block overlap function. 0: Disable 1: Enable
| #1443 G28ol | Enable G28 rapid traverse block overlap | Select whether to enable the G28 rapid traverse block overlap function. 0: Disable 1: Enable
| #1444 otsys | Stop all part systems at OT | Select whether to stop all the part systems or only the part system where H/W-OT, soft limit or interference check alarm has occurred. (Note) If H/W-OT, soft limit or interference check alarm has occurred on an axis related to superimposition, synchronization, arbitrary axis superimposition, or synchronization during axis traveling, the part system to which the superimposition (synchronous) and reference axes belong is treated as the one where the alarm has occurred. 0: Stop each part system 1: Stop all the part systems
| #1445 Tol-Custom-nondisp | Non-display of additional info on tool management screen | Select whether to display or hide additional information on the tool management screen. 0: Display 1: Not display
| #1446 Tlno.hold | Tool length offset No. retention | Select the operation to be performed when command T has no tool length offset No. 0: Tool length offset No. is deemed as 0. 1: Last commanded tool length offset No.is applied. (Tool length offset No. is unchanged.)
| #1447 G96_tmp_cancel | Temporary cancel of constant surface speed control | 0: Disable a spindle rotation command given in another part system 1: Enable a spindle rotation command given in another part system
| #1448 Sclamp_err_cancel | Cancel of the error for absence of spindle speed clamp | 0: Disable cancel of the error 1: Enable cancel of the error

(Note) This parameter is enabled when "#1450 5axis_Spec/bit0 (Axis name setting method of rotary axis configuration parameter)" is "1".

### #1451 M[M031-000](SMLK) Special operation registration M code (High-speed simple program check)

Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.

(Example) To register M05, set 00000020 in #1451.

Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

---Setting range---

0 to FFFFFFFF
Set this in hexadecimal format.

### #1452 M[M063-032](SMLK) Special operation registration M code (High-speed simple program check)

Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.

(Example) To register M05, set 00000020 in #1451.

Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

---Setting range---

0 to FFFFFFFF
Set this in hexadecimal format.

### #1453 M[M095-064](SMLK) Special operation registration M code (High-speed simple program check)

Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.

(Example) To register M05, set 00000020 in #1451.

Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

---Setting range---

0 to FFFFFFFF
Set this in hexadecimal format.
Register an M code to be output during high-speed simple program check.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1451.
Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

#1455  M[M159-128](SMLK)  Special operation registration M code (High-speed simple program check)
Register an M code to be output during high-speed simple program check.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1451.
Note that operation of the registered M code varies according to #1405 M_mode(SMLK).
---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

#1456  M[M191-160](SMLK)  Special operation registration M code (High-speed simple program check)
Register an M code to be output during high-speed simple program check.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1451.
Note that operation of the registered M code varies according to #1405 M_mode(SMLK).
---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

#1457  M[M223-192](SMLK)  Special operation registration M code (High-speed simple program check)
Register an M code to be output during high-speed simple program check.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1451.
Note that operation of the registered M code varies according to #1405 M_mode(SMLK).
---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

#1458  M[M255-224](SMLK)  Special operation registration M code (High-speed simple program check)
Register an M code to be output during high-speed simple program check.
Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1451.
Note that operation of the registered M code varies according to #1405 M_mode(SMLK).
---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.
Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1451.
Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

--- Setting range ---
0 to FFFFFFFF
Set this in hexadecimal format.

#1460 M[M319-288](SMLK) Special operation registration M code (High-speed simple program check)

Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1451.
Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

--- Setting range ---
0 to FFFFFFFF
Set this in hexadecimal format.

#1461 M[M351-320](SMLK) Special operation registration M code (High-speed simple program check)

Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1451.
Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

--- Setting range ---
0 to FFFFFFFF
Set this in hexadecimal format.

#1462 M[M383-352](SMLK) Special operation registration M code (High-speed simple program check)

Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1451.
Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

--- Setting range ---
0 to FFFFFFFF
Set this in hexadecimal format.

#1463 M[M415-384](SMLK) Special operation registration M code (High-speed simple program check)

Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.
(Example) To register M05, set 00000020 in #1451.
Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

--- Setting range ---
0 to FFFFFFFF
Set this in hexadecimal format.
### #1464  M[M447-416](SMLK)  Special operation registration M code (High-speed simple program check)

Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.

(Example) To register M05, set 00000020 in #1451.

Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

### #1465  M[M479-448](SMLK)  Special operation registration M code (High-speed simple program check)

Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.

(Example) To register M05, set 00000020 in #1451.

Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

### #1466  M[M511-480](SMLK)  Special operation registration M code (High-speed simple program check)

Register an M code to be output during high-speed simple program check. Each bit of the set value corresponds to the M code number.

(Example) To register M05, set 00000020 in #1451.

Note that operation of the registered M code varies according to #1405 M_mode(SMLK).

---Setting range---
0 to FFFFFFFF
Set this in hexadecimal format.

### #1467  Manual MSTB macro  MSTB macro call via manual numerical value command

Not used.

### #1468  ctrl period  Control period

Not used.

### (PR) #1471  mgralmstp  Enable machine groupwise alarm stop

Select whether to enable the machine groupwise alarm stop function.

0: Disable
1: Enable

### (PR) #1472  mgralmrestart  Allowing automatic operation to start after machine groupwise alarm stop

Select whether to allow automatic operation to be activated after machine groupwise alarm stop.

0: Not allow automatic operation to start after machine groupwise alarm stop
1: Allow automatic operation to start after machine groupwise alarm stop

### (PR) #1473  mgralmcont  Allowing operation to continue after machine groupwise alarm stop

When any alarm causes an axis that is in the midst of program execution to stop, this parameter allows you to select the behavior of axes that belong to machine groups other than that of the said axis.

0: Feed hold
1: The operation is allowed to continue.

</table>
**bit2: Selection of trigger edge for Cycle start**

Select the trigger edge of the Cycle start signal.

0: Falling edge (from ON to OFF)

1: Rising edge (from OFF to ON)

**bit4: Direct transfer of spindle speed command data**

Select the method of transferring the spindle speed command data to the "Spindle command rotation speed output" device.

0: The spindle speed command data is transferred not from the NC but from the PLC. Thus a ladder that sets the rotation speed is required in the sequence program.

1: The spindle speed command data output from the NC is directly transferred.

---

### #1925 EtherNet Start of service

Start or stop the Ethernet communication function.

0: Stop

1: Start

---

### #1926 Global IP address IP address

Set the main CPU's IP address.

Set the NC IP address seen from an external source.

--- **Setting range** ---

Set these parameters in accordance with the network rules in the connection environment.

---

### #1927 Global Subnet mask Subnet mask

Set the subnet mask for the IP address.

--- **Setting range** ---

Set these parameters in accordance with the network rules in the connection environment.

</tbody>
</table>

*Not used. Set to "0".*
#11017  T-ofs set at run  Tool compensation amount setting during automatic operation enabled

Select whether to enable the tool compensation amount setting and life value setting during automatic operation and operation pause.

0: Disable
1: Enable

#11018  M password hold  Machine user password is held

When set to "1", the "Machine user" (operation level 6) password will be held even if the NC is restarted.

0: Do not hold
1: Machine user password is held

(PR) #11019  2-system display  2-part system simultaneous display

Select whether to enable simultaneous display of multiple part systems on the monitor screen.

0: Display one part system on the monitor screen.
1, 2: Display two part systems simultaneously on the monitor screen.

(Note) If the number of part systems to display is smaller than that of the simultaneous display, a single part system display is selected.

(PR) #11020  Mcngit_Spec  Machining interruption specification

bit0: Restart after emergency stop

Select whether to enable/disable restart after emergency stop.

0: Disable
1: Enable

(Note) When you select "Enable", the option for machining interruption function is needed.

---Setting range---

0000 to FFFF (hexadecimal)

#11021  PLC mesg disp type  Format of PLC alarm and operator message

Select the format of PLC alarms and operator messages to be displayed on the bottom right of the screen.

0: Display up to the first 40 characters.
1: If text is longer than 40 characters, divide it into two and display separately. (Supplementary information is displayed together)

#11022  SRAM Output Type

Not used. Set to "0".

#11023  G33.n Drn

Not used. Set to "0".

#11024  G33.n fhd

Not used. Set to "0".

#11028  Tolerance Arc Cent  Tolerable correction value of arc center error

Set the tolerable correction value for the calculated coordinate value error of R-specified circular center.

When a difference between "a line between the start and end points" and "commanded radius x 2" is the tolerance or smaller, the error is corrected so that the middle of a line between the start and end points will be the arc center.

When [Setting value < 0]: 0 (Not correct arc center error)
When [Setting value = 0]: 2 x minimum setting increment
When [Setting value > 0]: Setting value

---Setting range---

<Metric system> -1 to 0.100 (mm)
<Inch system> -0.0393 to 0.0039 (inch)
16 Machine Parameters

### #11029 Arc to G1 no Cent

Change command from arc to linear when no arc center designation

When arc center or radius designation is omitted from arc command, change the arc command into linear without causing program error.

- 0: Program error
- 1: Change into linear command

### #11030 Man tap sync canc

Synchronization cancel in manual synchronous tapping

Select whether handle feed of the tapping axis in manual synchronous tapping synchronizes with the spindle or not.

- 0: Synchronize with the spindle
- 1: Not synchronize with the spindle

### #11031 Cursor pos search

Cursor position search

Select the cursor position searching method.

- 0: Disable
- 1: Pressing the INPUT key in [Monitr] - [Edit] menu starts the operation search for the block with the cursor.
- 2: Turning ON/OFF the "Edit/Search" signal in [Monitr] - [Edit] menu starts the operation search for the block with the cursor.
- 3: Turning ON/OFF the "Edit/Search" signal in [Monitr] - [Edit] menu starts the operation search for the block with the cursor.

Pressing the reset key shows the top of the program on the [Edit/Search] window.

### #11032 Menu sel para lkof

Validate menu selection parameter setting

Select whether to enable the setting of the "menu selection parameters" (#10501 to #10530, #10551 to #10580, and #10601 to #10630), with which the order of main menus on Monitor, Setup and Edit screens can be rearranged. And also select who is allowed to do this setting.

- 0: Disable
- 1: Enable (machine tool builder password is required)
- 2: Enable (users are allowed to set)

### #11033 skipB_no_sens

Unconnected sensor selection when skip is set to contact B

Select the contact of the sensor which you wish to set as unconnected, when the skip signal is set to contact B.

Set "1" for the contact to be unconnected.

- bit0: Skip input 1
- bit1: Skip input 2
- bit2: Skip input 3
- bit3: Skip input 4
- bit4: Skip input 5
- bit5: Skip input 6
- bit6: Skip input 7
- bit7: Skip input 8

(Note 1) This parameter is enabled when "#1258 set30/bit0" is set to "1".

(Note 2) This parameter is independent of PLC skip.

---Setting range---

00000000 to 11111111 (Binary)

### #11034 G12AddrCheckType

Command address type to check in circular cutting

Select the type of command address to check in circular cutting.

- 0: Regard command addresses other than D, F, I as illegal.
- 1: Regard the command address H as illegal.

And commands other than D,F,I and M,S,T,B are disabled.
### #11035 Sys. change limit
- **Part system switching restriction**
- This restricts switching the part systems displayed on screen.
  - 0: Not restrict
  - 1: Disable the part system switching by pressing [$<-$] key on touch panel.
  - 2: Disable the part system switching by display switch signals(Y730 to Y733).

### #11036 meas dir judge
- **Non-sensitive band for manual measurement direction judgment (for M system only)**
- Set the non-sensitive band to be used for judging the manual measurement direction.
  - If the feedback position fluctuates widely at the axis stop, set the fluctuation width or larger value in this set the parameter.
  - When set to "0", the band will be 1 (µm).
- **Setting range**
  - 0 to 1000 (µm)
  - 0: 1 (µm)

### #11037 R-Navi Index Type
- **R-Navi machining surface indexing type**
- Not used.

### #11038 T disp typ
- **T display (tool command value) type (For L system only)**
- Select the T display (tool command value) type on the monitor screen between displaying tool No. only or displaying tool No. and compensation No. (L system only)
  - 0: Display tool No. only
  - 1: Display the tool command value (the combined value consisting of the tool No. and compensation No.) last commanded by the program. Even in a manual value command, the program's tool command value is displayed.

### #11039 Cusr pos srch type
- **Cursor position search type**
- Set the availability of the cursor position search during single block stop when "#11031 Cursor pos search" is any of "1" to "3".
  - 0: Disable cursor position search during single block stop.
  - 1: Enable cursor position search during single block stop.
  - Sub-program is displayed when selecting menus [Monitr]-[Edit] while single block stop is carried out during sub-program with this parameter set to 1.

### #11051 Direct Socket ON
- **Direct Socket communication I/F ON**
- Not used.

### #11052 LOG Sort Order
- **Log data sorting order**
- Select in which order to sort the operation log files (all logs) to be output.
  - 0: Sort the data in chronologically ascending order separately for each log type.
  - 1: Sort the data in chronologically ascending order for all the log types.
  - If the times and dates logged are identical, the log files are output in the order of key, touchscreen, alarm, PLC signal, tool offset change, workpiece offset change and AC power.

### #11054 Sp-stby disp type
- **Spindle-standby display type**
- Specify which magazine to display when Sp-stby is selected on the Spindle standby or Tool registration screen.
  - 0: Fixed to the magazine #1
  - 1: The magazine selected by the menu (Magazine 1 to Magazine 5).

### #11055 Disp. sysno
- **Number of part systems to display**
- Specify how many part systems to display on a screen.
  - 0: The same number as that of the enabled part systems
  - 1 or greater: The number specified by this parameter serves as that of the part systems to display.
  - (Note) The setting range differs according to the NC model.
  - For the number of part systems displaying in the operating state, follow this parameter setting.
- **Setting range**
  - 0 to 8

### 16.4 Axis Specifications Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Setting Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>#2001 rapid</td>
<td>Set the rapid traverse feedrate for each axis. (Note) The maximum value to be set depends on the machine specifications.</td>
<td>1 to 1000000 (mm/min)</td>
</tr>
<tr>
<td>#2002 clamp</td>
<td>Set the maximum cutting feedrate for each axis. Even if the feedrate in G01 exceeds this value, the clamp will be applied at this feedrate.</td>
<td>1 to 1000000 (mm/min)</td>
</tr>
</tbody>
</table>
HEX-1 Rapid traverse acceleration/deceleration type

0 (bit3,2,1,0 = 0000): Step
1 (bit3,2,1,0 = 0001): Linear acceleration/deceleration
2 (bit3,2,1,0 = 0010): Primary delay
8 (bit3,2,1,0 = 1000): Exponential acceleration and linear deceleration
F (bit3,2,1,0 = 1111): Soft acceleration/deceleration

(Note) Primary delay is applied because R1 setting has priority over R3 setting when R1 and R3 are both set to "1".

HEX-2 Cutting feed acceleration/deceleration type

0 (bit7,6,5,4 = 0000): Step
1 (bit7,6,5,4 = 0001): Linear acceleration/deceleration
2 (bit7,6,5,4 = 0010): Primary delay
8 (bit7,6,5,4 = 1000): Exponential acceleration and linear deceleration
F (bit7,6,5,4 = 1111): Soft acceleration/deceleration

HEX-3 Stroke end stop types

0 (bit9,8 = 00): Linear deceleration (Decelerates at G0t1)
1 (bit9,8 = 01): Linear deceleration (Decelerates at 2×G0t1)
2 (bit9,8 = 10): Position loop step stop
3 (bit9,8 = 11): Position loop step stop

(Note) OT1(bit8) is valid under the following conditions (valid for dog type zero point return):
- Stop type: Linear deceleration
- Acceleration/deceleration mode: Exponential Acceleration and Linear deceleration

HEX-4

Not used. Set to "0".
Set a linear control time constant for rapid traverse acceleration and deceleration. This time constant is enabled when LR (rapid traverse feed with linear acceleration/deceleration) or F (soft acceleration/deceleration) is selected in "#2003 smgst" (Acceleration and deceleration modes).

---Setting range---

1 to 4000 (ms)
Set a primary-delay time constant for rapid traverse acceleration and deceleration. This time constant is enabled when R1 (rapid traverse feed with primary delay) or R3 (exponential acceleration and linear deceleration) is selected in "#2003 smgst" (Acceleration and deceleration modes). When the soft acceleration/deceleration is selected, the second-step time constant will be used.

**<Rapid traverse feed with primary delay>**

![Diagram of rapid traverse feed with primary delay](image)

**<Rapid traverse feed with exponential acceleration and linear deceleration>**

![Diagram of rapid traverse feed with exponential acceleration and linear deceleration](image)

**<Soft acceleration/deceleration>**

*When "#1219 aux03/bit7" is set to "0"*

![Diagram of soft acceleration/deceleration](image)

(Note) The time constant setting for the soft acceleration/deceleration can be changed by the setting of "#1219 aux03/bit7"

---Setting range---

1 to 5000 (ms)

---End---

**#2006 G0t2**

Not used. Set to "0".
Set a linear control time constant for cutting acceleration and deceleration. The time constant will be enabled when LC (cutting feed with linear acceleration/deceleration) or F (soft acceleration/deceleration) is selected in "#2003 smgst" (Acceleration or deceleration modes).

---Setting range---
1 to 4000 (ms)

---Setting range---
1 to 5000 (ms)

Set the primary delay time constant for cutting acceleration and deceleration. The time constant will be enabled when C1 (cutting feed with the primary delay) or C3 (cutting feed with exponential acceleration and linear deceleration) is selected in "#2003 smgst" (Acceleration/deceleration modes).

When the soft acceleration/deceleration is selected, the second-step time constant will be used.

---Setting range---
1 to 5000 (ms)
<table>

<tr>
<td>#2013 OT -</td>
<td>Set a soft limit area with reference to the zero point of the basic machine coordinate. Set the coordinate in the negative direction for the movable area of stored stroke limit 1. The coordinate in the positive direction is set in &quot;#2014 OT+&quot;. To narrow the available range in actual use, use the parameters &quot;#8204 OT-&quot; and &quot;#8205 OT+&quot;. When the same value (other than &quot;0&quot;) is set in this parameter and &quot;#2014 OT+&quot;, this function will be disabled.---Setting range----99999.999 to 99999.999 (mm)</td>
</tr>
</tbody>
</table>
Set a soft limit area with reference to the zero point of the basic machine coordinate. Set the coordinate in the positive direction for the movable area of stored stroke limit 1. The coordinate in the negative direction is set in “#2013 OT-”.

To narrow the available range in actual use, use the parameters “#8204 OT-” and “#8205 OT+”.

When the same value (other than “0”) is set in this parameter and “#2013 OT-”, this function will be disabled.

---Setting range---
-99999.999 to 99999.999 (mm)

Set a sensor position in the negative direction when using the tool setter.

When the TLM is used, set up the distance of a tool replacement point (reference point) for measuring the tool length from the zero point to the measurement reference point (surface).

(Notes) In the case of the basic axis and inclined axis of the inclined axis specifications, set the position on the orthogonal coordinate.

---Setting range---
-99999.999 to 99999.999 (mm)

Set the sensor position in the positive direction when using the tool setter.

When the TLM is used, set the distance from a tool change point (reference position) to the measurement basic point (surface) in order to measure the tool length.

(Notes) In the case of the basic axis and inclined axis of the inclined axis specifications, set the position on the orthogonal coordinate.

---Setting range---
-99999.999 to 99999.999 (mm)

Set the position loop gain for special operations (synchronized tapping, interpolation with spindle C axis, etc.).

Set the value in 0.25 increments.

The standard setting value is “10”.

---Setting range---
0.25 to 200.00 (rad/s)

Select when performing test operation without connecting the drive unit and motor.

0: Normal operation
1: Test operation

When “1” is set, the operation will be possible even if drive units and motor are not connected, because the drive system alarm will be ignored.

This parameter is used for test operation during start up: Do not use during normal operation. If “1” is set during normal operation, errors will not be detected even if they occur.

Set the steps required for reference position return for each axis.

0: Not execute reference position return.
1 to max. number of NC axes: Steps required for reference position return
Set the distance from the second reference position to the position for checking that the spindle orientation has completed during second reference position return.

---Setting range---
0 to 99999.999 (mm)

Set the maximum speed outside the soft limit range.

---Setting range---
0 to 1000000 (mm/min)

Select whether to disable a soft limit check during the second to the fourth reference position return in both automatic and manual operation modes.

0: Enable
1: Disable

Set the minimum speed outside the soft limit range during the second to the fourth reference position return.

---Setting range---
0 to 1000000 (mm/min)

Set the maximum synchronization error, allowable at the synchronization error check, for the master axis.

---Setting range---
0 to 99999.999 (mm)
During simple C-axis synchronous control: 0 to 99999.999(*)

Set the coordinate of the lower limit of the area where the stored stroke limit IB is inhibited.
Set a value from zero point in the basic machine coordinate system.
If the same value (non-zero) with the same sign as that of "#2062 OT_IB+" is set, the stored stroke limit IB function will be disabled.

---Setting range---
-99999.999 to 99999.999 (mm)

Set the coordinate of the upper limit of the area where the stored stroke limit IB is inhibited.
Set a value from zero point in the basic machine coordinate system.

---Setting range---
-99999.999 to 99999.999 (mm)

Select the type that applies the settings of "#2062 OT_IB+" and "#2061 OT_IB-" in stored stroke limit I.

0: Soft limit IB
1: Disable
2: Soft limit IC
3: Soft limit is checked for the inclined axis control axis with the program coordinate system.

(Note) This is valid only for inclined axis' basic axis and inclined axis.

</tr>
<tr>
<td></td>
<td><strong>Setting range</strong> &lt;br&gt;0000 to 02FF (HEX)</td>
</tr>
</tbody>
</table>
Under the standard specifications, the OT (+) signal is assigned to a fixed device. Set the input device in this parameter when it is desired to assign the OT (+) signal to a position other than the fixed device.

(Note 1) This parameter is enabled in the following conditions.
NC axis: When "#1226 aux10/bit5" is set to "1".
PLC axis: When "#1246 set18/bit7" is set to "1".

(Note 2) When this parameter is valid, do not set the existing device number. If the existing device number is set, an emergency stop will occur. However, no device number check will be performed for an axis to which the "OT ignored" signal is input.

---Setting range---
0000 to 02FF (HEX)

Under the standard specifications, the OT (-) signal is assigned to a fixed device. Set the input device in this parameter when it is desired to assign the OT (-) signal to a position other than the fixed device.

(Note 1) This parameter is enabled in the following conditions.
NC axis: When "#1226 aux10/bit5" is set to "1".
PLC axis: When "#1246 set18/bit7" is set to "1".

(Note 2) When this parameter is valid, do not set the existing device number. If the existing device number is set, an emergency stop will occur. However, no device number check will be performed for an axis to which the "OT ignored" signal is input.

---Setting range---
0000 to 02FF (HEX)

Select whether the axis is a normal axis or an index table indexing axis.
0: Normal axis
1: Index table indexing axis

(Note) This parameter is valid only for the NC axis. The parameter is invalid if set for the PLC axis.

---Setting range---
0.000 to 99.999 (mm)

Set the in-position width for G0.
Between SV024 and this parameter, the parameter with a larger value will be applied.
When "0" is set, this parameter will be invalid. Only SV024 will be available.
When "#1205 G0dbcc" is "1", SV024 is used as the G0 in-position width.

---Setting range---
0.000 to 99.999 (mm)

Set the in-position width for G1.
Between SV024 and this parameter, the parameter with a larger value will be applied.
When "0" is set, this parameter will be invalid. Only SV024 will be available.

---Setting range---
0.000 to 99.999 (mm)

Set the coefficient to be applied to the compensation amount for the insufficient amount caused by servo delay during chopping.

---Setting range---
0 to 10 (standard value: 8)
Set the tolerance between the commanded stroke and actual stroke.
Compensation will be applied during chopping so that the result of [command width - maximum stroke of top or bottom dead point] / 2 will be within this tolerance.

---Setting range---
0 to 10,000 (mm)

Set the clamp speed in chopping operation.
When "0" is set, the clamp speed will be determined by "#2002 clamp".

---Setting range---
0 to 60,000 (mm/min)

Set the No. for each axis in order from the 1st automatically returning axis to the restart position.
When "0" is set, the axis will not return.
Note that when "0" is set for all axes, all of the axes will return simultaneously.
(Note) On the absolute position system, when performing the restart search just after power ON, and when the axis that is the order 0 is moved by the follow-up, an operation error (M01 0128) may occur.

---Setting range---
0 to 16

Select how to operate the unidirectional positioning when the positioning command (G00) is issued.
0: Carry out unidirectional positioning according to the command and modal.
1: Carry out unidirectional positioning regardless of the command and modal.
Set "1" for the axis to carry out the unidirectional positioning at every positioning command, regardless of whether the unidirectional positioning command and modal are issued.

<Related parameters>
"#8209 G60 SHIFT" and "#2076 index_x"

Set the maximum feed rate for each axis when the external deceleration signal is ON.
This parameter is valid when "#1239 set11/bit6" is set to "1".

---Setting range---
0 to 1,000,000 (mm/min)

Set the polarity of synchronized axis with respect to reference axis to the bit corresponding to each axis.
0: Relative to reference axis, polarity is positive
1: Relative to reference axis, polarity is negative

---Setting range---
0 to FF (hexadecimal)

Set the reference axis for synchronous control with the 2nd axis name (axname2). A numerical character cannot be set as the 1st character.

---Setting range---
1st character: A to Z
2nd character: A to Z, 1 to 9

Not used. Set to "0".

Not used. Set to "0".

Select which door group of the speed monitoring the spindle belongs to.

- 0000: Door 1 group.
- 0001: Door 2 group.
- 0002: Door 1 and 2 group.
- 0003: Door 1 and 2 group.

The speed monitoring will not be executed when "#2313 SV113 SSF8/bitF" is OFF regardless of this parameter.

The selected door group must be set when setting the synchronous control.

The spindle/C axis control enables the door selection in "#3071 SscDrSelSp" for the corresponding spindle.

---Setting range---

-99999999 to 99999999 (Interpolation unit)
Set the speed range during cutting feed.
(The speed less than 1 is the low speed, and the speed exceeding 2 is the high speed.)
Note that the speed range is identified in the order of low, high and medium speed. Consider whether the set value should be larger or smaller than other values.
---Setting range---
0 to 480000 (mm/min)

Set the range of the distance during cutting feed.
(The distance less than 1 is the small distance, and the distance exceeding 2 is the large distance.)
Note that the distance range is identified in the order of small, large and medium. Consider whether the set value should be larger or smaller than other values.
---Setting range---
0 to 999999.999999 (mm)

Set the range of the center of the end point position.
(The range less than position 1 is the - range, and the range exceeding position 2 is the + range.)
The end point position range is determined in the order of -, +, and center. Consider whether the set value should be larger or smaller than other values.
(Note 1) If continuous variable backlash is set with "#2121 vbacklash valid", position 1 will be set as the position - point and position 2 will be set as the position + point.
(Note 2) When the size relation of the compensation amount changeover speed and distance 1 and 2 is not appropriate while the variable backlash compensation is valid, the followings will be applied: If the backlash speed and distance are smaller than the compensation amount changeover speed and distance 1, both the speed and distance will be small; if larger than the compensation amount changeover speed and distance 2, both the speed and distance will be large.

---Setting range---
-999999.999999 to 999999.999999 (mm)

---Setting range---
0: Enable
1: Temporarily disable

Set the range of the center of the end point position.
(The range less than position 1 is the - range, and the range exceeding position 2 is the + range.)
The end point position range is determined in the order of -, +, and center. Consider whether the set value should be larger or smaller than other values.
(Note 1) If continuous variable backlash is set with "#2121 vbacklash valid", position 1 will be set as the position - point and position 2 will be set as the position + point.
(Note 2) When the size relation of the compensation amount changeover speed and distance 1 and 2 is not appropriate while the variable backlash compensation is valid, the followings will be applied: If the backlash speed and distance are smaller than the compensation amount changeover speed and distance 1, both the speed and distance will be small; if larger than the compensation amount changeover speed and distance 2, both the speed and distance will be large.

Select the arc compensation coefficient.
---Setting range---
0 to 300(%)}

Select the speed range to be used as the reference position.
0: Low speed
1: Medium speed
2: High speed

Select the end point range to be used as the reference position.
0: Position + range
1: Position center range
2: Position - range

Select the entry direction to be used as the reference position.
0: Entry direction +
1: Entry direction -

Set the position center point. (This is used only when continuous variable backlash is set with "#2121 vbacklash valid"). Set a value between "#2132 vback pos1" and "#2133 vbackpos2" for the position center point.
(Note) When the size relation of the compensation amount changeover speed and distance 1 and 2 is not appropriate while the variable backlash compensation is valid, the followings will be applied: If the backlash speed and distance are smaller than the compensation amount changeover speed and distance 1, both the speed and distance will be small; if larger than the compensation amount changeover speed and distance 2, both the speed and distance will be large.

Select whether to enable or temporarily disable the OMR-FF control when OMR-FF is valid.
0: Enable
1: Temporarily disable

When "1" is selected while OMR-FF is valid, OMR-FF can be temporarily disabled and conventional feed forward control can be applied instead.
Set the error detection time for when an error of command speed monitoring or feedback speed monitoring is detected during servo OFF.

An alarm will occur if the time, for which the speed has been exceeding the safe speed or safe rotation speed, exceeds the error detection time set in this parameter.

If "0" is set, it will be handled as 200 (ms).

---Setting range---
0 to 9999 (ms)

Not used. Set to "0.000".
Set the distance for specifying the compensation change rate in position-dependent increasing-type backlash compensation.

When "#2148 Blf_E1" is set to "0", the position-dependent increasing-type backlash compensation function will be disabled.

---Setting range---
0.000 to 99999.999 (mm)

Set the distance for specifying the compensation change rate in position-dependent increasing-type backlash compensation.

When "#2148 Blf_E1" is set to "0", the position-dependent increasing-type backlash compensation function will be disabled.

---Setting range---
0.000 to 99999.999 (mm)

Set the compensation amount for specifying the compensation change rate in position-dependent increasing-type backlash compensation.

When "#2148 Blf_E1" is set to "0", the position-dependent increasing-type backlash compensation function will be disabled.

---Setting range---
0 to 9999999 (Machine error compensation unit)
#2149 Blf_E1
Reference amount of position-dependent increasing-type backlash compensation

Set the compensation amount for specifying the compensation change rate in position-dependent increasing-type backlash compensation.

When 

---Setting range---
0 to 9999999 (Machine error compensation unit)

#2150 Rot_len
Farthest distance from rotary axis center

Set the farthest distance of the rotating part from the rotation center for executing the 3D machine interference check. When "0" is set, this distance will conform to the rotary axis' specification speed.

---Setting range---
0.000 to 99999.999 (mm)

#2151 rated_spd
Rated speed

Set the maximum speed which can be driven with the motor's maximum torque.

(Note 1) This parameter's setting value must be smaller than 
"#2001 rapid Rapid traverse". If bigger, constant inclination acceleration/deceleration will be applied.

(Note 2) If rapid traverse constant-gradient multi-step acceleration/deceleration is valid, and also if this parameter is set to "0", constant inclination acceleration/deceleration will be applied.

---Setting range---
0 to 1000000 (mm/min)
Set the rate in proportion to the maximum acceleration rate in rapid traverse.
(Note) If this parameter is set to "0" or "100", constant inclination acceleration/deceleration will be applied.

---Setting range---
0 to 100 (%)

Set the acceleration rate up to the rated speed of rapid traverse constant-gradient multi-step acceleration/deceleration.
(Note) If this parameter is set to "0", constant inclination acceleration/deceleration will be applied.

---Setting range---
0 to 4000 (ms)

Set the feed forward gain when controlling as workpiece axis of tool spindle synchronization II (hobbing).

---Setting range---
0 to 200 (%)

Not used. Set to "0".

Not used. Set to "0".

Specify the compensation coefficient to be used for adjusting a path error and clamp speed at a corner for each axis during the high-accuracy control mode. If the setting value is larger, the edge accuracy will improve, but the cycle time may be longer because the corner speed will slow down.
This parameter is disabled when the per-axis acceleration tolerance control is OFF.

---Setting range---
-1000 to 99 (%)

Set the upper limit value of feedrate for each axis when the external deceleration signal is enabled and external deceleration speed 1 is selected.
This parameter is valid when "#1239 set11/bit6" is set to "1".

---Setting range---
0 to 1000000 (mm/min)

Set the upper limit value of feedrate for each axis when the external deceleration signal is enabled and external deceleration speed 2 is selected.
This parameter is valid when "#1239 set11/bit6" is set to "1".

---Setting range---
0 to 1000000 (mm/min)
16 Machine Parameters

---#2163 exdcax3
External deceleration speed 3---

Set the upper limit value of feedrate for each axis when the external deceleration signal is enabled and external deceleration speed 3 is selected.
This parameter is valid when "#1239 set11/bit6" is set to "1".
---Setting range---
0 to 1000000 (mm/min)

---#2164 exdcax4
External deceleration speed 4---

Set the upper limit value of feedrate for each axis when the external deceleration signal is enabled and external deceleration speed 4 is selected.
This parameter is valid when "#1239 set11/bit6" is set to "1".
---Setting range---
0 to 1000000 (mm/min)

---#2165 exdcax5
External deceleration speed 5---

Set the upper limit value of feedrate for each axis when the external deceleration signal is enabled and external deceleration speed 5 is selected.
This parameter is valid when "#1239 set11/bit6" is set to "1".
---Setting range---
0 to 1000000 (mm/min)

---#2169 Man meas rtrn dir
Return direction in manual measurement---

Select the direction of return operation in manual measurement.

0: Opposite to the contact direction
1: Fixed to the + direction
   Attempting return in the - direction will cause the operation alarm "0033 Rtn dir err in manual measure".
2: Fixed to the - direction
   Attempting return in the + direction will cause the operation alarm "0033 Rtn dir err in manual measure".

---#2170 Lmc1QR
Lost motion compensation gain 1 for high-speed retract---

Set the lost motion compensation gain in drilling cycle at high-speed retract (CW: - to + direction, CCW: + to - direction).
Set "-1" when drilling cycle at high-speed retract is not performed.
When set to 0, the performance will follow the setting of "#2171 Lmc2QR (Lost motion compensation gain 2 for high-speed retract)".
---Setting range---
-1, 0 to 200(%) 

---#2171 Lmc2QR
Lost motion compensation gain 2 for high-speed retract---

Set the lost motion compensation gain in drilling cycle at high-speed retract (CW: - to + direction, CCW: + to - direction).
Set "-1" when drilling cycle at high-speed retract is not performed.
When set to 0, the performance will follow the setting of "#2170 Lmc1QR (Lost motion compensation gain 1 for high-speed retract)".
---Setting range---
-1, 0 to 200(%) 

---#2172 LmcdQR
Lost motion compensation timing for high-speed retract---

Set the timing of the lost motion compensation in drilling cycle at high-speed retract.
When set to 0, the performance will follow the setting of "#2239 SV039 LMCD (Lost motion compensation timing)".
---Setting range---
0 to 2000 (ms)
### #2173 LmckQR
Lost motion compensation 3 spring constant for high-speed retract

Set the machine system’s spring constant when using lost motion compensation type 3 in drilling cycle with high-speed retract.

When set to “0”, the performance will follow the setting of “#2285 SV085 LMCk (Lost motion compensation 3 spring constant)”.

---Setting range---
0 to 32767 (0.01%/μm)

### #2174 LmccQR
Lost motion compensation 3 viscous coefficient for high-speed retract

Set the machine system’s viscous coefficient when using lost motion compensation type 3 in drilling cycle at high-speed retract.

When set to “0”, the performance will follow the setting of “#2286 SV086 LMCc (Lost motion compensation 3 viscous coefficient)”.

---Setting range---
0 to 32767 (0.01%/μm)

### #2175 Special Ax Radius
Special diametral axis radius

Set the radius of the special diametral axis.

---Setting range---
0 to 99999.999 (mm)

### #2176 Special Ax Clamp
Special diametral axis clamp speed

Set a clamp speed for the special diametral axis control.
Set the limit speed of the drive system in this parameter.

---Setting range---
0 to 1000000 (°/min)

(Note) For "#2001 rapid" and "#2002 clamp", set speeds on a machining line.
When the value in "#2176 Special Ax Clamp" is smaller than that in "#2001 rapid", "Special Ax Clamp" value will be applied to the clamp speed.

### #2177 ManualFeedBtL
Time constant for manual feed rate B

Set the acceleration/deceleration time constant for manual feed rate B.

(Note) When set to “0”, this parameter will not be used: conventional acceleration/deceleration will be performed.

---Setting range---
0 to 20000 (ms)

(PR) #2180 S_DIN
Speed observation input door No.

Set the door signal input in the drive unit.
Use this parameter only when the axis with a door signal belongs to several door groups.
The correspondence between the door signals and bits are as follows.

| bit0: Door1 signal | bit1: Door2 signal |

If the axis does not receive any door signal, set to “0”.
If 0 is set to the axis to which a door signal is input, the setting of #2118 is applied.
Do not turn ON more than one bit.
Only the door signals set in #2118 can be set.

---Setting range---
0000 to 0002 (HEX)
Set the observation speed, which is at the machine end, in the multi-step speed monitor.
(Note 1) When the setting value is larger than 18000, the last 2 digits will be ignored.
E.g.: 1234567 -> 1234500 (mm/min, °/min)
(Note 2) Observation speeds (#2181 to #2186 and #2191 to #2192) need to satisfy the following condition.
If not satisfied, the alarm (Y20 0007) will result.

\[
\text{sscfeed1} \times \frac{SV002:PC2}{SV001:PC1} \leq 32767
\]

---Setting range---
0 to 6553500 (mm/min or °/min)

Set the observation speed, which is at the machine end, in the multi-step speed monitor.
(Note 1) When the setting value is larger than 18000, the last 2 digits will be ignored.
E.g.: 1234567 -> 1234500 (mm/min, °/min)
(Note 2) Observation speeds (#2181 to #2186 and #2191 to #2192) need to satisfy the following condition.
If not satisfied, the alarm (Y20 0007) will result.

\[
\text{sscfeed1} \times \frac{SV002:PC2}{SV001:PC1} \leq 32767
\]

---Setting range---
0 to 6553500 (mm/min or °/min)

Set the observation speed, which is at the machine end, in the multi-step speed monitor.
(Note 1) When the setting value is larger than 18000, the last 2 digits will be ignored.
E.g.: 1234567 -> 1234500 (mm/min, °/min)
(Note 2) Observation speeds (#2181 to #2186 and #2191 to #2192) need to satisfy the following condition.
If not satisfied, the alarm (Y20 0007) will result.

\[
\text{sscfeed1} \times \frac{SV002:PC2}{SV001:PC1} \leq 32767
\]

---Setting range---
0 to 6553500 (mm/min or °/min)

Set the observation speed, which is at the machine end, in the multi-step speed monitor.
(Note 1) When the setting value is larger than 18000, the last 2 digits will be ignored.
E.g.: 1234567 -> 1234500 (mm/min, °/min)
(Note 2) Observation speeds (#2181 to #2186 and #2191 to #2192) need to satisfy the following condition.
If not satisfied, the alarm (Y20 0007) will result.

\[
\text{sscfeed1} \times \frac{SV002:PC2}{SV001:PC1} \leq 32767
\]

---Setting range---
0 to 6553500 (mm/min or °/min)
Set the observation speed, which is at the machine end, in the multi-step speed monitor.
(Note 1) When the setting value is larger than 18000, the last 2 digits will be ignored.
E.g.: 1234567 -> 1234500 (mm/min, °/min)
(Note 2) Observation speeds (#2181 to #2186 and #2191 to #2192) need to satisfy the following condition.
If not satisfied, the alarm (Y20 0007) will result.

\[
\frac{\text{sscfeed1} \sim \text{sscfeed6}}{\text{SV018}:\text{PIT}} \times \frac{\text{SV002}:\text{PC2}}{\text{SV001}:\text{PC1}} \leq 32767
\]

---Setting range---

0 to 6553500 (mm/min or °/min)

Specify the I/F No. of the PLC axis to use when switching between NC axis and PLC axis. Set the I/F No. of a vacant PLC axis. When not using, set to "0".

---Setting range---

0 to 8

This parameter specifies which observation speed change signal is input in the drive unit. The observation speed change signal corresponds to the following bits of the parameter.

- bit0: Observation speed change signal 1 is connected.
- bit1: Observation speed change signal 2 is connected.
- bit2: Observation speed change signal 3 is connected.

If the axis receives no observation speed change signal, set to "0000".
(Note) When a same setting value is set to more than one axis, or when more than one bit is set to turn ON for one axis, the alarm (Y20 0027) will occur.

---Setting range---

0000 to 0004 (HEX)

Specify the stall torque of the servo motor. This value is used for calculating the servo motor's power consumption.

---Setting range---

0.000 to 1000.000 (N•m)
Set the head R register No. to be used for setting/checking stored stroke limit I.
Eight consecutive R registers from the R register No. set here will be the area for stored stroke limit I.
Changing the areas for stored stroke limit I will be disabled if an R register that is not in the user area is set.
In addition, make sure to set an even number for the head R register No. Changing the areas for stored stroke limit I will be disabled if an odd number is set.

---Setting range---
0 to 29892

Set the observation speed, which is at the machine end, in the multi-step speed monitor.
(Note 1) When the setting value is larger than 18000, the last 2 digits will be ignored.
E.g.: 1234567 -> 1234500 (mm/min, °/min)
(Note 2) Observation speeds (#2181 to #2186 and #2191 to #2192) need to satisfy the following condition.
If not satisfied, the alarm (Y20 0007) will result.

\[
\frac{\text{sscfeed}_{1\sim 8}}{\text{SV018:PC1}} \times \frac{\text{SV002:PC2}}{\text{SV001:PC1}} \leq 32767
\]

---Setting range---
0 to 6553500 (mm/min or °/min)

Set the observation speed, which is at the machine end, in the multi-step speed monitor.
(Note 1) When the setting value is larger than 18000, the last 2 digits will be ignored.
E.g.: 1234567 -> 1234500 (mm/min, °/min)
(Note 2) Observation speeds (#2181 to #2186 and #2191 to #2192) need to satisfy the following condition.
If not satisfied, the alarm (Y20 0007) will result.

\[
\frac{\text{sscfeed}_{1\sim 8}}{\text{SV018:PC1}} \times \frac{\text{SV002:PC2}}{\text{SV001:PC1}} \leq 32767
\]

---Setting range---
0 to 6553500 (mm/min or °/min)

Set the constant inclination acceleration/deceleration time constant of the hobbing workpiece axis when issuing a hobbing command while the hobbing spindle is rotating. Hobbing workpiece axis time constant is the constant inclination acceleration/deceleration time constant with respect to #2002 Cutting feed rate for clamp function.

If the setting value of hobbing workpiece axis time constant is out of setting range, set the maximum value in the setting range.

---Setting range---
1 to 4000 (ms)

Set the boundary value of the speed in calculating the compensation amount.
---Setting range---
1 to 1000000 (mm/min)

Set the compensation magnification in calculating the compensation amount. When "0" is set, the magnification is 100%.
---Setting range---
0 to 300(%)  

Set the multiplier in calculating the compensation amount. When "1000" is set, the multiplier is "1".
---Setting range---
0 to 1000 (1/1000)

Set the value to subtract from the compensation amount (CMP) at reversing the axis travel direction.
---Setting range---
-99999999 to 99999999 (Machine error compensation unit)

Set the travel distance to return to the compensation amount (CMP) from the reverse point of the axis travel direction.
---Setting range---
0 to 99999.999 (mm)

The commanded G code of the index table indexing axis is checked.
0: Check is not performed.
1: Cutting feed G command is prohibited.

Specify the speed at which compensation scale is reset to 100%. When "0" is set, this parameter is disabled.
If a set speed is greater than "#2574 VBL2 VBound", the speed is clamped at "#2574 VBL2 VBound".
---Setting range---
0 to 1000000 (mm/min)

Set a linear control time constant for rapid traverse acceleration/deceleration to be applied when the G0 time constant switchover request signal is ON.
This time constant is enabled when LR (rapid traverse feed with linear acceleration/deceleration) or F (soft acceleration/deceleration) is selected in "#2003 smgst" (Acceleration and deceleration modes).
If #2598 is 0, the time constant set in "#2004 G0tL (G0 time constant)" will be used.
---Setting range---
0 to 4000(ms)
**#2599 G0t1_2**  
G0 time constant 2 (primary delay)/2nd-step time constant for soft acceleration/deceleration

Set a primary-delay time constant for rapid traverse acceleration/deceleration to be applied when the G0 time constant switchover request signal is ON.

This time constant is enabled when R1 (rapid traverse feed with primary delay) or R3 (exponential acceleration and linear deceleration) is selected in "#2003 smgst" (Acceleration and deceleration modes).

When the soft acceleration/deceleration is selected, the second-step time constant will be used.

If #2599 is set to 0, the time constant set in "#2005 G0t1 (G0 time constant (primary delay)/2nd-step time constant for soft acceleration/deceleration)" will be used.

---Setting range---

0 to 5000 (ms)

---(PR)---

**#2614 JH_smgSel**  
Jog/handle acceleration/deceleration selection

Switch jog/handle time constants. Set per axis.

0: Not use
1: (Not used)
2: Enable for handle feed

**#2616 JHtL**  
Jog/handle time constant (linear)

Set a linear control time constant for jog/handle feed acceleration/deceleration. When set to "0", the time constant will be clamped at 1 [ms].

---Setting range---

0 to 4000 (ms)

**#2619 thr_clamp**  
Thread cut clamp speed

Specify the maximum cutting feed rate to be applied to thread cutting for each axis.

---Setting range---

1 to 1000000

**#2620 thr_t**  
Thread cut time constant

Specify the primary delay time constant to be used in acceleration/deceleration of a thread cut axis.

* This parameter is enabled when either C1 (Primary delay cutting feed) or LC (Linear acceleration/deceleration cutting feed) is selected for the acceleration/deceleration mode (#2003 smgst).

---Setting range---

0 to 4000

**#2621 plrapid2**  
Rapid traverse rate for superimposition control 2

Not used. Set to "0".

**#2622 pl3G0tL**  
G0 time constant (linear) for 3-axis serial superimposition control

Not used. Set to "0".

**#2623 pl3G0t1**  
G0 time constant (primary delay) for 3-axis serial superimposition control

Not used. Set to "0".

**#2624 pl3G1tL**  
G1 time constant (linear) for 3-axis serial superimposition control

Not used. Set to "0".

---Diagram---

![Graph](image-url)
### #2625 pl3G1t1
G1 time constant (primary delay) for 3-axis serial superimposition control

Not used. Set to "0".

### #2626 pl3rapid
Rapid traverse rate for 3-axis serial superimposition control

Not used. Set to "0".

### #2627 pl3rapid2
Rapid traverse rate for 3-axis serial superimposition control 2

Not used. Set to "0".

### #2628 pl3rapid3
Rapid traverse rate for 3-axis serial superimposition control 3

Not used. Set to "0".

### #2629 pl3clamp
Cutting feed clamp speed for 3-axis serial superimposition control

Not used. Set to "0".

### #2630 pl3clamp2
Cutting feed clamp speed for 3-axis serial superimposition control 2

Not used. Set to "0".

### #2631 G00linps
Rapid traverse block overlap G00 in-position width

Specify the in-position width for the rapid traverse block overlap at the joint of consecutively given G00 blocks.

---Setting range---
0.000 to 1000.000 (mm)

### #2632 G10linps
Rapid traverse block overlap G01 in-position width

Specify the in-position width for the rapid traverse block overlap at the joint of two blocks where G01 is included.

---Setting range---
0.000 to 1000.000 (mm)

### #2633 G280linps
Rapid traverse block overlap G28 in-position width

Specify the in-position width for the rapid traverse block overlap at the joint of two blocks where G28/G30 is included.

---Setting range---
0.000 to 1000.000 (mm)

(PR) #2634 SrvFunc01

--- bit0: Change output units of servo axis cutting torue ---
Change the output units of the servo axis cutting torque.
0: Output unit 1%
1: Output unit 0.01%

--- bit1: Select stop method at collision detection ---
Set the operation when a collision is detected.
0: Emergency stop.
1: Servo alarm occurs to an axis that the collision was detected.
The axes in the part system that the collision was detected will be in an automatic interlocked state.

Related parameters: SV035/bitE-C, SV035/bitB, SV060, CrshStpSel

### #2639 tskip_T
Non-sensitive band for torque skip

Specify a period of time in which torque skip condition is disabled. This is effective when an improper skip is generated due to current flown during acceleration (when G160 is commanded).

---Setting range---
0 to 32767(ms)

</tbody>
</table>
16.5 Zero Point Return Parameters

### #2025 G28rap G28 rapid traverse rate

Set a rapid traverse rate for the dog type reference position return command. This is not used for the distance-coded reference position detection.

---Setting range---

1 to 1000000 (mm/min)

### #2026 G28crp G28 approach speed

Set up the speed of approach to the reference point in the reference point return command. This speed is attained after the system stops with deceleration by dog detection.

In the distance-coded reference position detection, the set value will be applied from the start of reference position establishment.

(Note) The G28 approach speed unit is (10°/min) only when using the Z-phase type encoder (#1226 aux10/bit3=1) for the spindle/C-axis reference position return type. The same unit is used for both the micrometric and sub-micrometric specifications.

---Setting range---

1 to 60000 (mm/min)

### #2027 G28sft Reference position shift distance

Set the distance from the electrical zero-point detection position to the reference position. This is not used for the distance-coded reference position detection.

(Note 1) When "#1240 set12/bit2" is ON, a magnification (C: 10-fold, D: 100-fold and E: 1000-fold) corresponding to the input setting unit ("#1003 iunit") will be applied to the setting value.

(Note 2) The sign of setting value is will be following: the direction of "#2030 dir (-)" Reference position direction (-) is plus, and the opposite direction is minus.

(Note 3) When set value is set to minus, the axis moves to electrical zero-point detection position at first and then moves in opposite direction.

---Setting range---

-99.999 to +99.999 (mm)

### #2028 grmask Grid mask amount

Set the distance where the grid point will be ignored when near-point dog OFF signals are close to that grid point during reference position return.

The grid mask is valid for one grid. This is not used for the distance-coded reference position detection.

---Setting range---

0.000 to 99.999 (mm)
Set the distance between grids.
Generally, set up the value equal to the ball screw pitch. However, if the encoder grid interval is not equal to the screw pitch when measured with a linear scale, set up the encoder grid interval.
To make the grid space smaller, set a divisor of the grid space.
This is not used for the distance-coded reference position detection.

(Note) Set the grid interval "#2029 grspc" according to the reference encoder for grid interval "#2041 grspcref".

(1) Semi-closed loop control
If "#2041 grspcref" is set to "0" (grid interval by the motor-side), set "#2029 grspc" to the same value as the ball screw pitch.
If "#2041 grspcref" is set to "1" (grid interval by the machine-side), set "#2029 grspc" to the moving amount calculation value per a motor rotation ("#2201 SV001 PC1" / "#2202 SV002 PC2" x "#2218 SV018 PIT").

(2) Full-closed loop control
If "#2041 grspcref" is set to "1" (grid interval by the machine-side), set "#2029 grspc" to the same value as the Z phase pitch.
If "#2041 grspcref" is set to "0" (grid interval by the motor-side), set "#2029 grspc" to the moving amount calculation value per Z phase pitch ("#2202 SV002 PC2" / "#2201 SV001 PC1" x the Z phase pitch of the machine-side).

* If "#2029 grspc" is set to "0", the ball screw pitch ("#2218 SV018 PIT") is used instead of the grid interval.

---Setting range---
0.000 to 999.999 (mm)

(PR) #2030 dir (-) Reference position direction (-)  
Select which side of the near-point dog the reference position is established.  
For a rotary axis, select a direction that heads to the zero point from the intermediate point during automatic zero point return.  
0: Positive direction  
1: Negative direction

Directions in which reference position is established as viewed from the near-point dog

--- #2031 noref Axis without reference position ---
Select whether the reference position is provided for the axis.  
0: Reference position is provided. (Normal controlled axis)  
1: No reference position is provided.

When "1" is set, reference position return is not required before automatic operation starts.
<table>

</tbody>
</table>
Set the distance from the first grid point after leaving the near point dog on the slave axis to the position where the reference position is actually established in dog-type reference position return in synchronous control. (Reference position shift amount is not included.)

The adjustment value will be automatically set in the slave axis's parameter according to the reference position adjustment complete signal from PLC.

Fine adjustment is also available from the parameter screen.

In the distance-coded reference position detection, the reference position adjustment value will be invalid.

(Note 1) This parameter is enabled when the synchronization at zero point initialization ("#1493 ref_syn" = "1" of the master axis) is applied.

(Note 2) This parameter can be set when one of the following settings is applied.
- Relative position detection ("#2049 type" = "0")
- Dog-type absolute position detection ("#2049 type" = "3")
- Simple absolute position ("#2049 type" = "9")

(Note 3) Set "0" when using the speed/current command synchronization control.

(Note 4) A setting unit of this parameter is [mm]. It is not influenced by the content of the following parameters setting.
- "#1003 iunit"
- "#1004 ctrl_unit"
- "#1005 plcunit"
- "#1040 M_inch"
- "#1041 I_inch"
- "#1240 set12/bit2" (Zero point shift amount magnification)

(Note 5) The number of the significant digits after decimal point follows "#1004 ctrl_unit".

(Note 6) A change of this parameter requires reference position return. When the automatic operation starts without reference position return, an alarm will occur.

---Setting range---

0 to 99999.99999 (mm)
#2037 G53ofs Reference position #1
Set the position of the first reference position from the zero point of the basic machine coordinate.

---Setting range---
-99999.999 to 99999.999 (mm)

#2038 #2_rfp Reference position #2
Set the position of the second reference position from the zero point of the basic machine coordinate.

---Setting range---
-99999.999 to 99999.999 (mm)

#2039 #3_rfp Reference position #3
Set the position of the third reference position from the zero point of the basic machine coordinate.

---Setting range---
-99999.999 to 99999.999 (mm)
### #2040 #4_rfp Reference position #4

Set the position of the fourth reference position from the zero point of the basic machine coordinate.

---Setting range---

-99999.999 to 99999.999 (mm)

</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>#2205 SV005 VGN1</th>
<th>Speed loop gain 1</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Set the speed loop gain. The higher the setting value is, the more accurate the control will be, however, vibration tends to occur. If vibration occurs, adjust by lowering by 20 to 30%. The value should be determined to the 70 to 80% of the value at which the vibration stops. The value differs depending on servo motors. Aim at the standard value determined by the servo motor type and load inertia ratio to adjust. ---Setting range--- 1 to 30000</td>
</tr>
</tbody>
</table>
Set the speed loop gain at the motor limitation speed VLMT (maximum rotation speed x 1.15) with "VCS(SV029: Speed at the change of speed loop gain)". Use this to suppress noise at high speed rotation during rapid traverse, etc. Then, the speed loop gain decreases at faster speed than the setting value of VCS. When not using, set to "0".

---Setting range---
-1000 to 30000

Set this when the limit cycle occurs in the full-closed loop, or overshooting occurs in positioning. The speed loop delay compensation method can be selected with SV027/bit1,0. Normally, use "Changeover type 2". Changeover type 2 controls the occurrence of overshooting by lowering the speed loop lead compensation after the position droop gets 0. When setting this parameter, make sure to set the torque offset (SV032).

---Setting range---
0 to 32767

Set the gain of the speed loop integral control.
Standard setting: 1364
Standard setting in the SHG control: 1900
Adjust the value by increasing/decreasing this by about 100 at a time.
Raise this value to improve contour tracking accuracy in high-speed cutting.
Lower this value when the position droop does not stabilize (when the vibration of 10 to 20Hz occurs).

---Setting range---
1 to 9999

Set the fixed value of each motor.
Set the standard value for each motor described in the standard parameter list.

---Setting range---
1 to 20480

Set the fixed value of each motor.
Set the standard value for each motor described in the standard parameter list.

---Setting range---
1 to 20480

Set the fixed value of each motor.
Set the standard value for each motor described in the standard parameter list.

---Setting range---
1 to 8192

Set the fixed value of each motor.
Set the standard value for each motor described in the standard parameter list.

---Setting range---
1 to 8192
### #2213 SV013 ILMT Current limit value

Set the current (torque) limit value in a normal operation.  
This is a limit value in forward run and reverse run (for linear motors: forward and reverse direction).  
When the standard setting value is "800", the maximum torque is determined by the specification of the motor.  
Set this parameter as a proportion (%) to the stall current.  

---Setting range---

0 - 999 (Stall current %)

### #2214 SV014 ILMTsp Current limit value in special control

Set the current (torque) limit value in a special operation (absolute position initial setting, stopper control and etc.).  
This is a limit value in forward and reverse directions.  
Set to "800" when not using.  
Set this parameter as a proportion (%) to the stall current.  

---Setting range---

0 - 999 (Stall current %)  
However, when SV084/bitB=1, the setting range is from 0 to 32767 (Stall current 0.01%).

### #2215 SV015 FFC Acceleration rate feed forward gain

When a relative error in synchronous control is too large, set this parameter to the axis that is delaying.  
The standard setting is "0". The standard setting in the SHG control is "100".  
To adjust a relative error in acceleration/deceleration, increase the value by 50 at a time.  

---Setting range---

0 to 999 (%)

### #2216 SV016 LMC1 Lost motion compensation 1

Set this parameter when the protrusion (that occurs due to the non-sensitive band by friction, torsion, back-lash, etc.) at quadrant change is too large. This sets the compensation torque at quadrant change (when an axis feed direction is reversed) by the proportion (%) to the stall torque. Whether to enable the lost motion compensation and the method can be set with other parameters.

Type 2: When SV027/bit9, 8=10 (Compatible with obsolete type)
Set the type 2 method compensation torque. The standard setting is double the friction torque.  
Related parameters: SV027/bit9,8, SV033/bitF, SV039, SV040, SV041, SV082/bit2

Type 3: When SV082/bit1=1
Set the compensation torque equivalent of dynamic friction amount of the type 3 method compensation amount. The standard setting is double the dynamic friction torque.  
Related parameters: SV041, SV082/bit2,1, SV085, SV086

To vary compensation amount according to the direction.  
When SV041 (LMC2) is "0", compensate with the value of SV016 (LMC1) in both +/-directions.  
If you wish to change the compensation amount depending on the command direction, set this and SV041 (LMC2).  
(SV016: + direction, SV041: - direction. However, the directions may be opposite depending on other settings.)  
When "-1" is set, the compensation will not be performed in the direction of the command.

---Setting range---

-1 to 200 (Stall current %)  
Note that when SV082/bit2 is "1", the setting range is between -1 and 20000 (Stall current 0.01%).
Select the servo specifications. A function is allocated to each bit. Set this in hexadecimal format.

Set the "Overload 1" (Alarm 50) current detection level as percentage to the stall current. Normally set this parameter to "150". (For Mitsubishi adjustment.)

Related parameters: SV021

---Setting range---
110 to 500 (Stall current %)

Set the excessive error detection width in servo ON. When set to "0", the excessive error alarm detection will be ignored, so do not set to "0".

<Standard setting value>
OD1=OD2= (Rapid traverse rate [mm/min]) / (60×PGN1) / 2 [mm]

Related parameters: SV026

---Setting range---
0 to 32767 (mm)
However, when SV084/bitC=1, the setting range is from 0 to 32767 (μm).

Set the in-position detection width. Set the positioning accuracy required for the machine. The lower the setting is, the higher the positioning accuracy will be. However the cycle time (settling time) becomes longer.

The standard setting value is "50".

---Setting range---
1 to 32767 (μm)

Set the position encoder type, speed encoder type and motor type. The setting value is a four-digit hex (HEX).

bit F-C: pen(HEX-4) Position encoder
Semi-closed loop control by general motor
pen=2

Full-closed loop control by general motor
- Ball screw end encoder (OSA405ET2AS, OSA676ET2AS)
  pen=6
- For serial signal output rotary scale (including MDS-EX-HR)
  pen=6
- For rectangular wave signal output linear scale
  pen=8
- For serial signal output linear scale (including MDS-EX-HR and MPI scale)
  pen=A
- For speed command synchronization control
  Primary axis pen=A
  Secondary axis pen=D

For linear motor
pen=A

For direct-drive motor
pen=2

bit B-8: ent(HEX-3) Speed encoder
For general motor: ent=2
For linear motor: ent=A
For direct-drive motor: ent=2
bit 7-0: mtyp(HEX-2,1) Motor type

Set the motor type. Set this with SV017/bitF-C.

For SV017/bitF-C = 1 (200V standard motor series)
- HG75 : 41h
- HG105 : 42h
- HG54  : 43h
- HG104 : 44h

**bit F-C: ovsn Overshooting compensation type 3 Non-sensitive band**

Set the non-sensitive band of the model position droop overshooting amount in increments of 2μm. In the feed forward control, set the non-sensitive band of the model position droop and ignore the overshooting of the model.

- 0 : 0 μm, 1: 2 μm, 2: 4μm,---, E : 28 μm, F: 30μm

**bit B-8 : linN** The number of parallel connections when using linear motors (for linear)

Set to "2" to perform 1 amplifier 2 motor control by linear servo.

**bit 7-5**

Not used. Set to "0".

**bit 4 : dcd (linear/direct-drive motor)**

- 0: Normal setting 1: DC excitation mode

Related parameters: SV061, SV062, SV063

**bit 3**

Not used. Set to "0".

**bit 2 : mohn Thermistor temperature detection (linear/direct-drive motor)**

- 0: Normal setting 1: Disable

**bit 1 : has HAS control**

This stabilizes the speed overshooting by torque saturation phenomenon.

- 0: Normal setting 1: Enable

Related parameters: SV084/bitF

**bit 0**

Not used. Set to "0".
Select the servo functions.
A function is assigned to each bit.
Set this in hexadecimal format.

bit F: clt  Inertia ratio display

0: Setting for normal use
1: Display the total inertia ratio estimated at acceleration/deceleration at the inertia ratio on the servo monitor screen
To display it on the screen, set an imbalance torque and friction torque to both SV032 and SV045 and repeat acceleration/deceleration operations for several times.

bit E-C: clG1  G1 Collision detection level

Set the collision detection level in the collision detection method 1 during cutting feed (G1) in multiples of that of rapid traverse (G0). When set to "0", detection of collision detection method 1 during cutting feed will be ignored.

G1 Collision detection level = G0 collision detection level (SV060) × clG1

bit B: cl2n  Collision detection method 2

0: Enable      1: Disable

bit A: clstp  Collision detection method 1 disabled during stop

0: Collision detection method 1 enabled during stop
1: Collision detection method 1 disabled during stop

bit 9-8: cltq  Retract torque in collision detection

Set the retract torque in collision detection using the ratio of motor's maximum torque.

bit9,8=
00: 100%
01: 90%
10: 80% (Standard)
11: 70%

bit 7: ckab  No signal detection 2

Set this to use rectangular wave output linear scale.
This enables the detection of No signal 2 (alarm 21).

0: Disable      1: Enable

bit 6-0:

Not used. Set to "0".
MDS-E/EH Series: Power supply type

When connecting a power supply unit, set a code for each power supply unit.

bit 7-4 : emgx External emergency stop function

Set the external emergency stop function.
0: Disable  4: Enable

bit 3-0 :

Not used. Set to "0".

---Setting range---

For general motor: 0 to 5000 (%)
For linear motor: 0 to 5000 (kg)
Set the vibration frequency to suppress when machine vibration occurs.
(Normally, do not set 80 or less.)
Set to "0" when not using.
Related parameters: SV033/bit3-1, SV115
---Setting range---
0 to 5000 (Hz)

Set this when the timing of lost motion compensation type 2 does not match.
Adjust increments of 10 at a time.
---Setting range---
0 to 2000 (ms)

Set the non-sensitive band of the lost motion compensation in the feed forward control.
When "0" is set, 2μm is the actual value to be set. Adjust increments of 1μm.
---Setting range---
0 to 255 (μm)

Set this with SV016 (LMC1) only when you wish to vary the lost motion compensation amount depending on
the command directions.
Normally, set to "0".
---Setting range---
-1 to 200 (Stall current %)
Note that when SV082/bit2 is "1", the setting range is between -1 and 20000 (Stall current 0.01%).

Set this with SV031 (OVS1) only when you wish to vary the overshooting compensation amount depending
on the command directions.
Normally, set to "0".
---Setting range---
-1 to 100 (Stall current %)
Note that when SV082/bit2 is "1", the setting range is between -1 and 10000 (Stall current 0.01%).

Set the disturbance observer filter band.
Normally, set to "100". Setting values of 49 or less is equal to "0" setting.
To use the disturbance observer, also set SV037 (JL) and SV044 (OBS2).
When disturbance observer related parameters are changed, lost motion compensation needs to be readjusted.
Set to "0" when not using.
---Setting range---
0 to 1000 (rad/s)

Set the disturbance observer gain. The standard setting is "100 to 300".
To use the disturbance observer, also set SV037 (JL) and SV043 (OBS1).
When disturbance observer related parameters are changed, lost motion compensation needs to be readjusted.
Set to "0" when not using.
---Setting range---
0 to 500 (%)

Set the frictional torque when using the collision detection function.
To use load inertia estimation function (drive monitor display), set this parameter, imbalance torque (SV032) and load inertia display enabling flag (SV035/bitF).
---Setting range---
0 to 255 (Stall current %)

### #2252 SV052 DFBN  Dual feedback control non-sensitive band

Set the non-sensitive band in the dual feedback control. Normally, set to "0".

For linear servo/direct-drive motor system
   Not used. Set to "0".

Related parameters: SV017/bit1, SV052

---Setting range---
   0 to 9999 (μm)

### #2253 SV053 OD3  Excessive error detection width in special control

Set the excessive error detection width when servo ON in a special control (initial absolute position setting, stopper control and etc.). When "0" is set, excessive error detection will not be performed when servo ON during a special control.

---Setting range---
   0 to 32767 (mm)
   However, when SV084/bitC=1, the setting range is from 0 to 32767 (μm).

### #2254 SV054 ORE  Overrun detection width in closed loop control

Set the overrun detection width in the full-closed loop control. When the gap between the motor side encoder and the linear scale (machine side encoder) exceeds the value set by this parameter, it will be judged as overrun and "Alarm 43" will be detected. When "-1" is set, if the differential velocity between the motor side encoder and the machine side encoder exceeds the 30% of the maximum motor speed, it will be judged as overrun and "Alarm 43" will be detected.

When "0" is set, overrun will be detected with a 2mm width.

For linear servo/direct-drive motor system
   Not used. Set to "0".

---Setting range---
   -1 to 32767 (mm)
   However, when SV084/bitD=1, the setting range is from -1 to 32767 (μm).

### #2255 SV055 EMGx  Max. gate off delay time after emergency stop

Set the time required between an emergency stop and forced READY OFF. Set the maximum value "+ 100ms" of the SV056 setting value of the servo drive unit electrified by the same power supply unit.

When executing the vertical axis drop prevention, the gate off will be delayed for the length of time set at SV048 even when SV055's is smaller than that of SV048.

Related parameters: SV048, SV056

---Setting range---
   0 to 20000 (ms)

### #2256 SV056 EMGt  Deceleration time constant at emergency stop

Set the time constant used for the deceleration control at emergency stop.

Set the time required to stop from rapid traverse rate (rapid).

The standard setting value is EMGt=G0tL×0.9.

However, note that the standard setting value differs from the above-mentioned value when the setting value of "#2003:sgst Acceleration and deceleration modes bit 3-0:Rapid traverse acceleration/deceleration type" is 8 or F. Refer to Instruction Manual of the drive unit (section "5.5.1 Deceleration Control") for details.

Related parameters: SV048, SV055

---Setting range---
   0 to 20000 (ms)

### #2257 SV057 SHGC  SHG control gain

When performing the SHG control, set to SV003(PGN1)×6.

When not using the SHG control, set to "0".

When using the OMR-FF control, set to "0".

Related parameters: SV003, SV004

---Setting range---
   0 to 1200 (rad/s)
### #2258 SV058 SHGCsp
**SHG control gain in spindle synchronous control**

When using SHG control during spindle synchronization control (synchronous tapping and synchronous control with spindle C-axis), set this parameter with SV049 (PGN1sp) and SV050 (PGN2sp). Make sure to set the value 6 times that of SV049. When not using the SHG control, set to "0".

---Setting range---

<table>
<thead>
<tr>
<th>SV058 SHGCsp</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0 to 1200 (rad/s)</td>
</tr>
</tbody>
</table>

### #2259 SV059 TCNV
**Collision detection torque estimated gain**

Set the torque estimated gain when using the collision detection function. The standard setting value is the same as the load inertia ratio (SV037 setting value) including motor inertia. Set to "0" when not using the collision detection function.

Related parameters: SV032, SV035/bitF-8, SV037, SV045, SV060

<<Drive monitor load inertia ratio display>>

Set SV035/bitF=1 and imbalance torque and friction torque to both SV032 and SV045, and then repeat acceleration/deceleration for several times.

---Setting range---

- For general motor: 0 to 5000 (%)
- For linear motor: 0 to 5000 (kg)

### #2260 SV060 TLMT
**Collision detection level**

When using the collision detection function, set the collision detection level at the G0 feeding. When "0" is set, none of the collision detection function will work.

Related parameters: SV032, SV035/bitF-8, SV037, SV045, SV059

---Setting range---

<table>
<thead>
<tr>
<th>SV060 TLMT</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0 to 999 (Stall current %)</td>
</tr>
</tbody>
</table>

### #2261 SV061 DA1NO
**D/A output ch1 data No. / Initial DC excitation level**

Input the data number you wish to output to the D/A output channel 1. When using the 2-axis drive unit, set "-1" to the axis that the data will not be output.

When the DC excitation is running (SV034/bit4=1):
- Use this when the DC excitation is running (SV034/bit4=1) to adjust the initial magnetic pole position (when measuring the magnetic pole shift amount) for linear motor and direct-drive motor.
- Set the initial excitation level in DC excitation control.
- Set 10% as standard.

Related parameters: SV062, SV063

---Setting range---

<table>
<thead>
<tr>
<th>SV061 DA1NO</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>-32768 to 32767</td>
</tr>
</tbody>
</table>

### #2262 SV062 DA2NO
**D/A output ch2 data No. / Final DC excitation level**

Input the data number you wish to output to the D/A output channel 2. When using the 2-axis drive unit, set "-1" to the axis that the data will not be output.

When the DC excitation is running (SV034/bit4=1):
- Use this when the DC excitation is running (SV034/bit4=1) to adjust the initial magnetic pole position (when measuring the magnetic pole shift amount) for linear motor and direct-drive motor.
- Set the final excitation level in DC excitation control.
- Set 10% as standard.

When the magnetic pole shift amount measurement value is unsteady, adjust the value in increments of 5%.

Related parameters: SV061, SV063

---Setting range---

<table>
<thead>
<tr>
<th>SV062 DA2NO</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>-32768 to 32767</td>
</tr>
</tbody>
</table>
### #2263 SV063 DA1MPY  
**D/A output ch1 output scale / Initial DC excitation time**

Set output scale of the D/A output channel 1 in increment of 1/100.  
When "0" is set, the magnification is the same as when "100" is set.

When the DC excitation is running (SV034/bit4=1):  
Use this when the DC excitation is running (SV034/bit4=1) to adjust the initial magnetic pole position  
(when measuring the magnetic pole shift amount) for linear motor and direct-drive motor.  
Set the initial excitation time in DC excitation control.  
Set 1000ms as standard.  
When the magnetic pole shift amount measurement value is unsteady, adjust the value in increments of  
500ms.  
Related parameters: SV061, SV062

---Setting range---

-32768 to 32767 (1/100-fold)  
When the DC excitation is running (SV034/bit4=1): 0 to 10000 (ms)

### #2264 SV064 DA2MPY  
**D/A output ch2 output scale**

Set output scale of the D/A output channel 2 in increment of 1/100.  
When "0" is set, the magnification is the same as when "100" is set.

---Setting range---

-32768 to 32767 (1/100-fold)

### #2265 SV065 TLC

**Machine end compensation TLC**

The shape of the machine end is compensated by compensating the spring effect from the machine end to  
the motor end.  
Set the machine end compensation gain. Measure the error amount by roundness measurement and esti- 
mate the setting value by the following formula.

\[
\text{Compensation amount (μm)} = \frac{\text{Command speed (mm/min)}^2 \times \text{SV065}}{(\text{Radius R (mm)} \times \text{SV003} \times 16,200,000)}
\]

Set to "0" when not using.

---Setting range---

-30000 to 30000 (Acceleration ratio 0.1%)

### #2266-2272 SV066 - SV072

This parameter is set automatically by the NC system.

### (PR) #2273 SV073 FEEDOut

**Specified speed output speed**

Set the specified speed.  
Also set SV082/bit9,8 to output digital signal.

---Setting range---

0 to 32767 (r/min)  
However, when SV033/bitD=1, the setting range is from 0 to 32767 (100mm/min).  
(Only for MDS-E/EH and MDS-EM/EMH)

### #2274-2280 SV074 - SV080

This parameter is set automatically by the NC system.
Select the servo functions.
A function is assigned to each bit.
Set this in hexadecimal format.

```
Bit:  F   E   D   C   B   A   9   8   7   6   5   4   3   2   1   0

  absc
  szchk
  npg
```

bit F-A:
Not used. Set to "0".

bit 9: npg Earth fault detection
0: Disable  1: Enable (standard)
Set "0" and it is constantly "Enable" for MDS-EJ/EJH Series.

bit 8:
Not used. Set to "0".

bit 7: szchk Distance-coded reference scale reference mark
0: Check at 4 points (standard)  1: Check at 3 points

bit 6-4:
Not used. Set to "0".

bit 3: absc Distance-coded reference scale
0: Disable  1: Enable

bit 2-0:
Not used. Set to "0".
Select the servo functions.
A function is assigned to each bit.
Set this in hexadecimal format.

**bit F : h2c** HAS control cancel amount
- 0: 1/4 (standard)
- 1: 1/2

Related parameters: SV034/bit1

**bit E :**
Not used. Set to "0".

**bit D : oru** Overrun detection width unit
- 0: mm (normal setting)
- 1: μm

**bit C : odu** Excessive error detection width unit
- 0: mm (normal setting)
- 1: μm

**bit B : ilm2u** Current limit value (SV014) in special control setting unit
- 0: Stall current % (normal setting)
- 1: Stall current 0.01%

**bit A-1 :**
Not used. Set to "0".

**bit 0 : irms** Motor current display
- 0: Motor q axis current display (normal)
- 1: Motor effective current display

---Setting range---
0 to 32767 (0.01%/μm)

Set the machine system's spring constant when selecting lost motion compensation type 3.
When not using, set to "0".

Related parameters: SV016, SV041, SV082/bit2,1, SV086

---Setting range---
0 to 32767 (0.01%•s/mm)

Set the machine system's viscous coefficient when selecting lost motion compensation type 3.
When not using, set to "0".

Related parameters: SV016, SV041, SV082/bit2,1, SV086

---Setting range---
0 to 32767 (0.01%•s/mm)

Set the vibration frequency to suppress when machine vibration occurs.
(Normally, do not set 80 or less.)
Set to "0" when not using.

Related parameters: SV083/bit3-1, SV115

---Setting range---
0 to 5000 (Hz)
16 Machine Parameters

---#2288 SV088 FHz5 Notch filter frequency 5---
Set the vibration frequency to suppress when machine vibration occurs.
(Normally, do not set 80 or less.)
Set to "0" when not using.

Related parameters: SV083/bit7-5, SV115

---Setting range---
0 to 5000 (Hz)

---#2289 SV089---
Not used. Set to "0".

---#2290 SV090---
Not used. Set to "0".

---#2291 SV091 LMC4G Lost motion compensation 4 gain---
Use this with LMC compensation type 3. As the delay in path tracking is monitored and compensated, the
delay in path tracking will be minimized even if machine friction amount changes by aging. Use the lost mo-
tion compensation amount (SV016) * 5 (10% of the dynamic friction torque) as the target. The higher the set-
ting value is, the more accurate the quadrant change be; however, the more likely vibrations occur.

---Setting range---
0 to 20000 (Stall current 0.01%)

---#2292 SV092---
Not used. Set to "0".

---#2293 SV093---
Not used. Set to "0".

---#2294 SV094 MPV Magnetic pole position error detection speed---
The magnetic pole position detection function monitors the command speed and motor speed at the position
command stop and detects the magnetic pole position error alarm (3E) if any. Set the error detection level
for the command speed and motor speed at the position command stop.
Be aware when setting the parameter as the setting units for general motors and linear motors are different.

<<For general motor>>
When the command speed error detection level is set to "0", the magnetic pole position error (3E) is
detected at 10r/min.
Set "10" as standard.
This detects the magnetic pole position error (3E) when the motor rotation speed is 100r/min and more.

<<For linear motor>>
When the command motor speed level is set to "0", the magnetic pole position error (3E) is detected at
1mm/s.
Set "10" as standard.
This detects the magnetic pole position error (3E) when the motor speed is 10mm/s and more.

---Setting range---
0 to 31999

<<For general motor>>
Ten-thousands digit, Thousands digit ---------- Command speed error detection level (10r/min)
Hundreds digit, Tens digit, Ones digit ---------- Motor speed error detection level (10r/min)

<<For linear motor>>
Ten-thousands digit, Thousands digit ---------- Command speed error detection speed level (1mm/s)
Hundreds digit, Tens digit, Ones digit ---------- Motor speed error detection level (1mm/s)
#2295  SV095 ZUPD  Vertical axis pull up distance

Set this parameter to adjust the pull up distance when the vertical axis pull up function is enabled. When the pull up function is enabled and this parameter is set to "0", for a rotary motor, 8/1000 of a rotation at the motor end is internally set as the pull up distance, and for a linear motor, 80[μm] is set.

Related parameters:
- SV032 : The pull up direction is determined. When "0" is set, the alarm occurs.
- SV033/bitE : Start-up of the pull up function
- SV048 : Set the drop prevention time. When "0" is set, the alarm occurs.

---Setting range---
0 to 2000 (μm)

#2296-2305  SV096 - SV105

Not used. Set to "0".

#2306  SV106 PGM  OMR-FF scale model gain

Set the scale model gain (position response) in OMR-FF control.
Set the same value as SV003(PGN1).
Increase the setting value to perform a high-speed machining such as a fine arc or to improve the path error. Lower the value when vibration occurs during acceleration/deceleration.
Set to "0" when not using OMR-FF control.

---Setting range---
0 to 300 (rad/s)

#2307-2311  SV107 - SV111

Not used. Set to "0".

#2312  SV112 IFF  OMR-FF current feed forward gain

Set the current feed forward rate in OMR-FF control.
The standard setting is "10000".
Setting value of "0" is equal to "10000(100%)" setting.
Set to "0" when not using OMR-FF control.

---Setting range---
0 to 32767 (0.01%)

#2313  SV113 SSF8  Servo function 8

Select the servo functions.
A function is assigned to each bit.
Set this in hexadecimal format.

**bit F : are Notch filter all frequencies adapted**
When enabled, Notch filter all frequencies adaptive range is not limited regardless of SV115/bit4,5 setting.
0: Disable  1: Enable

**bit E-C: dsl Notch filter frequency display**
Switch the "AFLT frequency" display on drive monitor screen to check every notch filter frequency. When the selected notch filter is not used, "0" is displayed.

- bitE,D,C=
  - 000: Estimated resonance frequency (Normal display)
  - 001: Notch filter 1 frequency
  - 010: Notch filter 2 frequency
  - 011: Notch filter 3 frequency (always displays 1125Hz)
  - 100: Notch filter 4 frequency
  - 101: Notch filter 5 frequency
- Other settings: setting prohibited

**bit B : ade5 Notch filter 5 / Adaptive follow-up function**
0: Disable  1: Enable

0: Disable  1: Enable

**bit 8 : ade1 Notch filter 1 / Adaptive follow-up function**
0: Disable  1: Enable

**bit 7-6 : dsn Estimated resonance frequency display holding time**
Set the estimated resonance frequency display holding time to the "AFLT frequency" display on drive monitor screen.

- bit7,6=
  - 00: 4 [s]
  - 01: 8 [s]
  - 10: 12 [s]
  - 11: 16 [s]

**bit 5-4 : dfhz Notch filter frequency range**
Set the adaptive range of the notch filter frequency. When the adaptive follow-up function is enabled and if the estimated resonance frequency exists in the set range, the notch filter will be adapted. Normally set this parameter to "00".

- bit5,4=
  - 00: -10 to 10 [%]
  - 01: -20 to 20 [%]
  - 10: -30 to 30 [%]
  - 11: -40 to 40 [%]
bit 3-0 : esn  Sensitivity of estimated resonance frequency

Set the sensitivity of the estimated resonance frequency. Smaller setting value enables to detect smaller vibration component, however, adaptive movement will be repeated frequently. Normally set this parameter to "0".

0 : Normal setting (same sensitivity as A)   1 : Sensitivity high to F : Sensitivity low

---Setting range---

0 to 32767

bit1: fctcfw Full-closed torsion compensation function forward direction compensation enabled

Compensate the torsion amount in the forward direction with the full-closed torsion compensation function. When compensating the torsion amount in the reverse direction only, set to "0".

0: Stop 1: Start

---Setting range---

-1 to 32767

For high-accuracy binary resolution encoder, set the number of pulses to four bite data of SV117 (high-order) and SV019 (low-order) by pulse (p).

When SV117=0, the setting unit of SV019 is (kp).

Refer to SV019 for details.

Related parameters: SV019, SV020, SV118

---Setting range---

-1 to 32767

When using high-accuracy binary resolution encoder, set the number of pulses to four bite data of SV118 (high-order) and SV020 (low-order) by pulse (p).

When SV118=0, the setting unit of SV020 is (kp).

Refer to SV020 for details.

Related parameters: SV019, SV020, SV117

---Setting range---

-1 to 32767

Set the base reference mark intervals of distance-coded reference scale. When the distance-coded reference scale is not used, set to "0".

The interval of basic reference mark (SV130) and auxiliary interval (SV131) must be in the specified relationship. Other settings cause the initial parameter error (alarm 37).

Following is the specified relationship.

The quotient of (SV130×1000) / SV131 must be 4 or more and leaves no remainder.

Related parameters: SV081/bit7,3, SV131, SV134 to SV137

---Setting range---

0 to 32767 (mm)
Set the auxiliary interval of reference mark in the distance-coded reference scale. When the distance-coded reference scale is not used, set to "0". The interval of basic reference mark (SV130) and auxiliary interval (SV131) must be in the specified relationship. Other settings cause the initial parameter error (alarm 37).

Following is the specified relationship.

The quotient of \((SV130 \times 1000) / SV131\) must be 4 or more and leaves no remainder.

Related parameters: SV081/bit7,3, SV130, SV134 to SV137

---Setting range---

0 to 32767 (μm)

---Setting range---

Not used. Set to "0".

---Setting range---

Not used. Set to "0".

---Setting range---

Set this parameter to operate distance-coded reference check when using distance-coded reference scale. During the distance-coded reference check initial setup (SV137:RAER=−1), set the following items on the NC drive monitor screen after the distance-coded reference check initial setup warning A3 turns OFF.

\[
SV134=Rn, \ SV135=Pn, \ SV136=MPOS
\]

When reference point is set, the warning A3 turns OFF.

To enable the distance-coded reference check function, SV081/bit3=1 setting and a battery option are needed.

Related parameters: SV081/bit3,7, SV130, SV131, SV134 to SV137

---Setting range---

-32768 to 32767

---Setting range---

Set this parameter to operate distance-coded reference check when using distance-coded reference scale. During the distance-coded reference check initial setup (SV137:RAER=−1), set the following items on the NC drive monitor screen after the distance-coded reference check initial setup warning A3 turns OFF.

\[
SV134=Rn, \ SV135=Pn, \ SV136=MPOS
\]

When reference point is set, the warning A3 turns OFF.

To enable the distance-coded reference check function, SV081/bit3=1 setting and a battery option are needed.

Related parameters: SV081/bit3,7, SV130, SV131, SV134 to SV137

---Setting range---

-32768 to 32767

---Setting range---

Set this parameter to operate distance-coded reference check when using distance-coded reference scale. During the distance-coded reference check initial setup (SV137:RAER=−1), set the following items on the NC drive monitor screen after the distance-coded reference check initial setup warning A3 turns OFF.

\[
SV134=Rn, \ SV135=Pn, \ SV136=MPOS
\]

When reference point is set, the warning A3 turns OFF.

To enable the distance-coded reference check function, SV081/bit3=1 setting and a battery option are needed.

Related parameters: SV081/bit3,7, SV130, SV131, SV134 to SV137

---Setting range---

-32768 to 32767
For the distance-coded reference check function when using distance-coded reference scale, set the allowable gap from the reference point position data calculated by the main side encoder. When the gap exceeds the allowable range, reference point created by distance-code is judged as wrong and detects alarm 42. The standard setting value is "basic reference mark interval (SV130) / 4".

SV137=0 setting carries out the same operation as the standard setting value.
SV137=-1 setting enables the distance-coded reference initial setup mode and displays setting values of SV134 to SV136 on NC drive monitor.

To enable the distance-coded reference check function, SV081/bit3=1 setting and a battery option are needed.
When SV137=32767, the distance-coded reference check function is disabled.

Related parameters: SV081/bit 3,7, SV130, SV131, SV134 to SV136

---Setting range---
-1 to 32767 (mm)

---#2398 SV198 NSE No signal 2 special detection width---
Set the special detection width for the no signal 2 (alarm 21).
This detects no signal 2 (alarm 21) when machine side feedback is not invoked even if the motor side encoder feedback exceeds this setting in the rectangular wave signal output linear scale.
When "0" is set, the detection will be performed with a 15μm width.

---Setting range---
0 to 32767 (μm)

---#2399 SV199 RTGM Real-time tuning: maximum adaptive gain multiplier---
In case that machine resonance is induced when mounting a workpiece, the speed loop gain is switched automatically in response to inertia by setting the speed loop gain and workpiece inertia multiplier in advance.
The speed loop gain SV199(RTGM) changes in response to the estimated inertia ratio SV200(RTJX) based on the speed loop gain SV005(VGN1) and the inertia multiplier SV037(JL) which were adjusted when no workpiece was mounted.
When SV199 is set to "0", the adaptation of the speed loop gain will be disabled.

Speed control gain multiplier [%]

</table>
Set the spindle speed for gear shifting with gear 00.
(Note) Setting too large value may cause a gear nick when changing gears.
---Setting range---
0 to 32767 (r/min)

Set the spindle speed for gear shifting with gear 01.
(Note) Setting too large value may cause a gear nick when changing gears.
---Setting range---
0 to 32767 (r/min)

Set the spindle speed for gear shifting with gear 10.
(Note) Setting too large value may cause a gear nick when changing gears.
---Setting range---
0 to 32767 (r/min)

Set the speed which switches from 1st step to 2nd step in synchronous tapping multi-step acceleration/deceleration control when gear 00 is selected.
The inclination of linear acceleration/deceleration control for 1st step is determined by the ratio of "stap1"(#3013) to "stapt1"(#3017).
When the inclination is not set after 2nd step or it is higher than that of 1st step, the acceleration/deceleration control is executed with the same inclination as the 1st step for the rotation speed of "stap1" or higher.
---Setting range---
0 to 99999 (r/min)

Set the speed which switches from 1st step to 2nd step in synchronous tapping multi-step acceleration/deceleration control when gear 01 is selected.
The inclination of linear acceleration/deceleration control for 1st step is determined by the ratio of "stap2" (#3014) to "stapt2" (#3018).
When the inclination is not set after 2nd step or it is higher than that of 1st step, the acceleration/deceleration control is executed with the same inclination as the 1st step for the rotation speed of "stap2" or higher.
---Setting range---
0 to 99999 (r/min)

Set the speed which switches from 1st step to 2nd step in synchronous tapping multi-step acceleration/deceleration control when gear 10 is selected.
The inclination of linear acceleration/deceleration control for 1st step is determined by the ratio of "stap3" (#3015) to "stapt3" (#3019).
When the inclination is not set after 2nd step or it is higher than that of 1st step, the acceleration/deceleration control is executed with the same inclination as the 1st step for the rotation speed of "stap3" or higher.
---Setting range---
0 to 99999 (r/min)
### #3016 stap 4

**Synchronous tapping 1st step rotation speed (Gear: 11)**

Set the speed which switches from 1st step to 2nd step in synchronous tapping multi-step acceleration/deceleration control when gear 11 is selected. The inclination of linear acceleration/deceleration control for 1st step is determined by the ratio of "stap4" (#3016) to "stapt4" (#3020). When the inclination is not set after 2nd step or it is higher than that of 1st step, the acceleration/deceleration control is executed with the same inclination as the 1st step for the rotation speed of "stap4" or higher.

---Setting range---

0 to 99999 (r/min)

### #3017 stapt 1

**Synchronous tapping 1st step acceleration/deceleration time constant (Gear: 00)**

Set the time constant for synchronous tapping 1st step linear acceleration/deceleration control when gear 00 is selected. (linear acceleration/deceleration pattern)

---Setting range---

1 to 5000 (ms)

### #3018 stapt 2

**Synchronous tapping 1st step acceleration/deceleration time constant (Gear: 01)**

Set the time constant for synchronous tapping 1st step linear acceleration/deceleration control when gear 01 is selected. (linear acceleration/deceleration pattern)

---Setting range---

1 to 5000 (ms)

### #3019 stapt 3

**Synchronous tapping 1st step acceleration/deceleration time constant (Gear: 10)**

Set the time constant for synchronous tapping 1st step linear acceleration/deceleration control when gear 10 is selected. (linear acceleration/deceleration pattern)

---Setting range---

1 to 5000 (ms)
Set the time constant for synchronous tapping 1st step linear acceleration/deceleration control when gear 11 is selected. (linear acceleration/deceleration pattern)

---Setting range---
1 to 5000 (ms)

<Relation of spindle limit rotation speed and spindle maximum rotation speed>
The spindle rotation speed which can be attained at the spindle motor's maximum rotation speed is set for the limit rotation speed (slimt). This value is obtained by multiplying the gear ratio on the spindle motor maximum rotation speed (SP026).
Set the maximum rotation speed (smax) when the rotation speed is to be limited according to the machine specifications, such as the spindle gear specifications. Up to four value can be set for gear changeover.

<Relation of spindle limit rotation speed and spindle maximum rotation speed>

<table>
<thead>
<tr>
<th>#3020 stapt 4 Synchronous tapping 1st step acceleration/deceleration time constant (Gear: 11)</th>
</tr>
</thead>
</table>

The acceleration/deceleration control can be set up to three steps in synchronous tapping control to carry out an optimal acceleration/deceleration control in accordance with the spindle motor characteristics whose output torque steps down when exceeding the base rotation speed.
Set the inclination for 2nd step or subsequent steps when the maximum rotation speed exceeds the base rotation speed during synchronous tapping control.
When the inclination is not set after 2nd step or it is higher than that of 1st step, the acceleration/deceleration control is executed with the same inclination as the 1st step for all the rotation speed.
<Spindle synchronization multi-step acceleration/deceleration control parameter>

The acceleration/deceleration control can be set up to eight steps in spindle synchronization control to carry out an optimal acceleration/deceleration control in accordance with the spindle motor characteristics whose output torque steps down when exceeding the base rotation speed and further attenuate in output stepdown zone.

For 2nd step or subsequent steps, the specification allows to set the time constant magnification and changeover rotation speed based on the acceleration/deceleration setting of the 1st step.

Set the value of limit rotation speed or higher as the changeover rotation speed for the step not to be shifted when not carrying out a step shift.

---Setting range---

<table>

Set the deceleration rate of the encoder to the spindle when inputting ABZ pulse output encoder feedback to NC during analog spindle control.

0: 1/1
1: 1/2
2: 1/4
3: 1/8

---Setting range---

0 to 3
Set the minimum spindle speed. If an S command below this setting is issued, the spindle will rotate at the minimum speed set by this parameter.

---Setting range---
0 to 32767 (r/min)

Select the connection method with a spindle drive unit.
0: No unit to connect
1: Optical digital communication (Mitsubishi spindle drive unit)
2 - 5: S-analog (Analog spindle drive unit)

---Setting range---
0 to 5

Set the connection specifications of a spindle's encoder.
0: Without encoder feedback when using analog spindle and connecting to NC
1: With encoder feedback when using analog spindle and connecting to NC
2: Mitsubishi spindle drive unit

---Setting range---
0 to 2

Select the coil control in orientation mode for the spindle motor which performs coil changeover.
0: Perform coil changeover based on the command from NC. (depending on the setting of parameter #1239/bit0)
1: Use the coil L

Select the coil control in spindle synchronization control mode for the spindle motor which performs coil changeover.
0: Perform coil changeover based on the command from NC. (depending on the setting of parameter #1239/bit0)
1: Use the coil H

Set the M codes for the spindle forward run/reverse run commands during tapping cycle.
High-order 3 digits: Set the M code for spindle forward run command.
Low-order 3 digits: Set the M code for spindle reverse run command.

When "0" is set, it is handled assuming that "3004" is set (the M code for spindle forward run command is "3" and the M code for spindle reverse run command is "4").

---Setting range---
0 to 999999

Select the speed which is compared with S command at gear selection when using asynchronous tapping control with the spindle which performs gear changeover.
0: Synchronous tapping 1st step rotation speed (stap)-- Multi-step acceleration/deceleration is not used.
1: Maximum speed (smax)-- Multi-step acceleration/deceleration is used.
This parameter is enabled only when "#1272 ext08/bit1 is 1".

---Setting range---
0 to 999999

Not used. Set to "0".
Set the interface channel No. of CNC control unit to which the spindle is connected and the axis No. within each channel.

Set this parameter in 4-digit (hexadecimal) format.

---Setting range---

0000, 1001 to 1010, 2001 to 2010

Not used. Set to "0".

Select the data unit for communication with the spindle drive unit.

This selection is applied to the data communicated between the NC and spindle drive unit as well as the spindle movement data. Although the standard setting is B (0.001deg), set the same value as "#1004 ctrl_unit" when using Spindle/C axis control.

B: 0.001deg (1μm)
C: 0.0001deg (0.1μm)
D: 0.00001deg (10nm)
E: 0.000001deg (1nm)

Set the speed which switches from 2nd step to 3rd step in synchronous tapping multi-step acceleration/deceleration control when gear 00 is selected.

The inclination of linear acceleration/deceleration control for 2nd step is determined by the ratio of "taps21" (#3037) to "tapt21" (#3041). When the inclination is not set for 3rd step or it is higher than that of 2nd step, the acceleration/deceleration control is executed with the same inclination as the 2nd step for the rotation speed of "taps21" or higher.

---Setting range---

0 to 99999 (r/min)

Set the speed which switches from 2nd step to 3rd step in synchronous tapping multi-step acceleration/deceleration control when gear 01 is selected.

The inclination of linear acceleration/deceleration control for 2nd step is determined by the ratio of "taps22" (#3038) to "tapt22" (#3042). When the inclination is not set for 3rd step or it is higher than that of 2nd step, the acceleration/deceleration control is executed with the same inclination as the 2nd step for the rotation speed of "taps22" or higher.

---Setting range---

0 to 99999 (r/min)
Set the speed which switches from 2nd step to 3rd step in synchronous tapping multi-step acceleration/deceleration control when gear 10 is selected.
The inclination of linear acceleration/deceleration control for 2nd step is determined by the ratio of "taps23" (#3039) to "tapt23" (#3043).
When the inclination is not set for 3rd step or it is higher than that of 2nd step, the acceleration/deceleration control is executed with the same inclination as the 2nd step for the rotation speed of "taps23" or higher.

---Setting range---
0 to 99999 (r/min)

Set the speed which switches from 2nd step to 3rd step in synchronous tapping multi-step acceleration/deceleration control when gear 11 is selected.
The inclination of linear acceleration/deceleration control for 2nd step is determined by the ratio of "taps24" (#3040) to "tapt24" (#3044).
When the inclination is not set for 3rd step or it is higher than that of 2nd step, the acceleration/deceleration control is executed with the same inclination as the 2nd step for the rotation speed of "taps24" or higher.

---Setting range---
0 to 99999 (r/min)

Set the time constant for synchronous tapping 2nd step linear acceleration/deceleration control when gear 00 is selected.

---Setting range---
1 to 5000 (ms)

Set the time constant for synchronous tapping 2nd step linear acceleration/deceleration control when gear 01 is selected.

---Setting range---
1 to 5000 (ms)

Set the time constant for synchronous tapping 2nd step linear acceleration/deceleration control when gear 10 is selected.

---Setting range---
1 to 5000 (ms)

Set the time constant for synchronous tapping 2nd step linear acceleration/deceleration control when gear 11 is selected.

---Setting range---
1 to 5000 (ms)

Set the time constant for synchronous tapping 3rd step linear acceleration/deceleration control when gear 00 is selected.
The inclination of linear acceleration/deceleration control for 3rd step is determined by the ratio of slim-it1(#3001) to tapt31(#3045).

---Setting range---
1 to 5000 (ms)
Set the time constant for synchronous tapping 3rd step linear acceleration/deceleration control when gear 01 is selected.
The inclination of linear acceleration/deceleration control for 3rd step is determined by the ratio of slimit2 (#3002) to tapt32 (#3046).
---Setting range---
1 to 5000 (ms)

Set the time constant for synchronous tapping 3rd step linear acceleration/deceleration control when gear 10 is selected.
The inclination of linear acceleration/deceleration control for 3rd step is determined by the ratio of slimit3(#3003) to tapt33(#3047).
---Setting range---
1 to 5000 (ms)

Set the time constant for synchronous tapping 3rd step linear acceleration/deceleration control when gear 11 is selected.
The inclination of linear acceleration/deceleration control for 3rd step is determined by the ratio of slimit4(#3004) to tapt34(#3048).
---Setting range---
1 to 5000 (ms)

Set the acceleration/deceleration time constant under spindle synchronization control.
The inclination of acceleration/deceleration control is determined by the ratio to limit rotation speed (slimit).
Set the same value for the reference axis and synchronized axis.
The time constant for 2nd step or subsequent steps is the magnification setting on the basis of this setting value.
---Setting range---
0 to 9999 (ms)

Set the level of speed difference between the reference and synchronized spindles during spindle synchronization control. Setting of the synchronized spindle side is enabled. When the difference becomes below the setting level, the spindle speed synchronization complete signal will turn ON.
---Setting range---
0 to 4095 (pulse) (1 pulse = 0.088°)

Set the level of phase difference between the reference and synchronized spindles during spindle synchronization control. Setting of the synchronized spindle side is enabled. When the difference becomes below the setting level, the spindle phase synchronization complete signal will go ON.
---Setting range---
0 to 4095 (pulse) (1 pulse = 0.088°)

Set the polarity to match the rotation direction between the spindles which perform synchronization control under spindle synchronization control.
0: Positive polarity (Spindle CW rotation at motor CW rotation)
1: Negative polarity (Spindle CCW rotation at motor CW rotation)
---Setting range---
0000/0001 (HEX)
### #3053 sppt Spindle encoder Z-phase position

Set the deviation amount from the spindle's basic point to the spindle encoder's Z phase.  
Obtain the deviation amount, considering a clockwise direction as positive when viewed from the spindle's front side.  
---Setting range---  
0 to 359999 (1/1000°)

### #3054 sptc1 Spindle synchronization multi-step acceleration/deceleration changeover speed 1

Set the speed which switches from 1st step to 2nd step in spindle synchronization multi-step acceleration/deceleration control.  
Set the same value for the reference axis and synchronized axis.  
Set the value of limit rotation speed (slimit) or higher not to carry out a step shift.  
---Setting range---  
0 to 99999 (r/min)

### #3055 sptc2 Spindle synchronization multi-step acceleration/deceleration changeover speed 2

Set the speed which switches from 2nd step to 3rd step in spindle synchronization multi-step acceleration/deceleration control.  
Set the same value for the reference axis and synchronized axis.  
Set the value of limit rotation speed (slimit) or higher not to carry out a step shift.  
---Setting range---  
0 to 99999 (r/min)

### #3056 sptc3 Spindle synchronization multi-step acceleration/deceleration changeover speed 3

Set the speed which switches from 3rd step to 4th step in spindle synchronization multi-step acceleration/deceleration control.  
Set the same value for the reference axis and synchronized axis.  
Set the value of limit rotation speed (slimit) or higher not to carry out a step shift.  
---Setting range---  
0 to 99999 (r/min)

### #3057 sptc4 Spindle synchronization multi-step acceleration/deceleration changeover speed 4

Set the speed which switches from 4th step to 5th step in spindle synchronization multi-step acceleration/deceleration control.  
Set the same value for the reference axis and synchronized axis.  
Set the value of limit rotation speed (slimit) or higher not to carry out a step shift.  
---Setting range---  
0 to 99999 (r/min)

### #3058 sptc5 Spindle synchronization multi-step acceleration/deceleration changeover speed 5

Set the speed which switches from 5th step to 6th step in spindle synchronization multi-step acceleration/deceleration control.  
Set the same value for the reference axis and synchronized axis.  
Set the value of limit rotation speed (slimit) or higher not to carry out a step shift.  
---Setting range---  
0 to 99999 (r/min)
Set the speed which switches from 6th step to 7th step in spindle synchronization multi-step acceleration/deceleration control.
Set the same value for the reference axis and synchronized axis.
Set the value of limit rotation speed (slimit) or higher not to carry out a step shift.
---Setting range---
0 to 99999 (r/min)

Set the speed which switches from 7th step to 8th step in spindle synchronization multi-step acceleration/deceleration control.
Set the same value for the reference axis and synchronized axis.
Set the value of limit rotation speed (slimit) or higher not to carry out a step shift.
---Setting range---
0 to 99999 (r/min)

Set the acceleration/deceleration time constant to be used at the speed of changeover speed 1 (sptc1) and higher in spindle synchronization multi-step acceleration/deceleration control. Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).
---Setting range---
0 to 127

Set the acceleration/deceleration time constant to be used at the speed of changeover speed 2 (sptc2) and higher in spindle synchronization multi-step acceleration/deceleration control. Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).
---Setting range---
0 to 127

Set the acceleration/deceleration time constant to be used at the speed of changeover speed 3 (sptc3) and higher in spindle synchronization multi-step acceleration/deceleration control. Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).
---Setting range---
0 to 127

Set the acceleration/deceleration time constant to be used at the speed of changeover speed 4 (sptc4) and higher in spindle synchronization multi-step acceleration/deceleration control. Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).
---Setting range---
0 to 127

Set the acceleration/deceleration time constant to be used at the speed of changeover speed 5 (sptc5) and higher in spindle synchronization multi-step acceleration/deceleration control. Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).
---Setting range---
0 to 127

Set the acceleration/deceleration time constant to be used at the speed of changeover speed 6 (sptc6) and higher in spindle synchronization multi-step acceleration/deceleration control. Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).
---Setting range---
0 to 127

#3061  spdiv1  Time constant magnification for changeover speed 1

#3062  spdiv2  Time constant magnification for changeover speed 2

#3063  spdiv3  Time constant magnification for changeover speed 3

#3064  spdiv4  Time constant magnification for changeover speed 4

#3065  spdiv5  Time constant magnification for changeover speed 5

#3066  spdiv6  Time constant magnification for changeover speed 6
### #3067 spdiv7 Time constant magnification for changeover speed 7

Set the acceleration/deceleration time constant to use at the speed of changeover speed 7 (spctc7) and higher in spindle synchronization multi-step acceleration/deceleration control. Set this as a magnification in relation to the spindle synchronization acceleration/deceleration time constant (spt).

---Setting range---
0 to 127

### #3068 symtm1 Phase synchronization start confirmation time

Set the time to confirm that synchronization is attained before spindle phase synchronization control is started. When "0" is set, the time will be 2000ms. When "100" or less is set, the time will be 100ms.

---Setting range---
0 to 9999 (ms)

### #3069 symtm2 Phase synchronization end confirmation time

Set a period of waiting time for spindle phase synchronization control's completion as a time in which the speed stays within the attainment range. When "0" is set, the time will be 500ms. When "100" or less is set, the time will be 100ms.

---Setting range---
0 to 9999 (ms)

### #3070 syprt Phase synchronization alignment speed

Set the amount of speed fluctuation of synchronized spindle during spindle phase synchronization control. Set this as a proportion to commanded speed. When "0" is set, the amount will be 5%.

---Setting range---
0 to 100 (%)

--- Setting range ---
0000 to 0003 (HEX)

### (PR) #3071 SscDrSelSp Speed monitor Door selection

Select which door group of the speed monitoring a spindle belongs to.
- 0000: Belong to the door 1 group.
- 0001: Belong to the door 1 group.
- 0002: Belong to the door 2 group.
- 0003: Belong to the door 1 and 2 groups.

(Note) Speed monitoring function is validated when "SP229/bitF=1".

---Setting range---
0000 to 0003 (HEX)

### (PR) #3072 Ssc Svof Filter Sp Speed monitor Error detection time during servo OFF

Set the error detection time for when an error of command speed monitoring or feedback speed monitoring is detected during servo OFF. The alarm will occur if actual speed exceeds safe speed or safe rotation speed for a period of time longer than this setting. When "0" is set, the detection time will be 200 (ms).

(Note) Speed monitoring function is validated when "SP229/bitF=1".

---Setting range---
0 to 9999 (ms)

### #3074 GBsp Guide bushing spindle synchronization control

Not used. Set to "0".

### (PR) #3077 Sname Spindle command name

Specify a spindle name to be used for giving a spindle command. When spindle command name has been set for all the spindles, the spindle name type is used. If "0" is set to any spindle, the spindle No. type is selected.

(Note) Do not set an identical name to two or more of all the spindles.

---Setting range---
0 to 9
Set the threshold so that “Z38 Insulation deterioration wrn 0001” could occur. When performing the insulation deterioration detection and the detected value falls below the parameter setting value, “Z38 Insulation deterioration wrn 0001” occurs.

---Setting range---
0 to 300 (0.1 megohm)

Set the threshold so that “Z38 Insulation deterioration wrn 0002” could occur. When performing the insulation deterioration detection and the detected value falls below the parameter setting value, “Z38 Insulation deterioration wrn 0002” occurs.

---Setting range---
0 to 300 (0.1 megohm)

Set the acceleration/deceleration time constant with S command (speed operation mode) when gear 00 is selected. Set the linear acceleration/deceleration time up to limit rotation speed (slimit1). Set the short time constant that the motor torque at acceleration is always saturated, however, when an abnormal noise or V-belt slip occurs, increase the time constant.

---Setting range---
0 to 30000 (ms)

Set the acceleration/deceleration time constant with S command (speed operation mode) when gear 01 is selected. Set the linear acceleration/deceleration time up to limit rotation speed (slimit2). Set the short time constant that the motor torque at acceleration is always saturated, however, when an abnormal noise or V-belt slip occurs, increase the time constant.

---Setting range---
0 to 30000 (ms)

Set the acceleration/deceleration time constant with S command (speed operation mode) when gear 10 is selected. Set the linear acceleration/deceleration time up to limit rotation speed (slimit3). Set the short time constant that the motor torque at acceleration is always saturated, however, when an abnormal noise or V-belt slip occurs, increase the time constant.

---Setting range---
0 to 30000 (ms)

Set the acceleration/deceleration time constant with S command (speed operation mode) when gear 11 is selected. Set the linear acceleration/deceleration time up to limit rotation speed (slimit4). Set the short time constant that the motor torque at acceleration is always saturated, however, when an abnormal noise or V-belt slip occurs, increase the time constant.

---Setting range---
0 to 30000 (ms)

Set the speed deviation rate with respect to the commanded speed, at which the speed reach signal will be output. It will be 15% when set to "0". If the speed deviation is smaller than 45r/min, it will be set as 45r/min.

---Setting range---
0 to 100 (%)
Select the zero point return specification.
Functions are allocated to each bit.
Set this in hexadecimal format.

**bitF**: Spindle zero point detection with proximity switch

- 0: Normal
- 1: Enable spindle zero point detection using proximity switch

**bitE**: Control mode selection in orientation

Select non-interpolation mode when vibration occurs since the gain is high during the orientation.

- 0: Interpolation mode (Use the interpolation mode gain "SP002")
- 1: Non-interpolation mode (Use the non-interpolation mode gain "SP001")

**bitD**: Interpolation mode selection 1 (zero point return initiated during rotation)

- 0: Non-interpolation mode
- 1: Interpolation mode

**bitC**: Z phase detection method

- 0: Follows Z phase detection direction (bit0).
- 1: Rotates in the commanded direction at Z phase detection speed to detect Z phase.

* To enable Z phase detection operation, set the parameter "#3106 zrn_typ bit3 (Z phase detection operation ON)" to "1".

**bitA-9**: Spindle/C axis zero point return direction

- 00: Short-cut
- 01: Forward run
- 10: Reverse run

**bit8**: Designate zero point return

- 0: Compatible operation with our conventional series (Automatically return to zero point simultaneously with C-axis changeover)
- 1: Standard setting

**bit7**: Synchronous tapping command polarity

- 0: Forward direction
- 1: Reverse direction (The standard setting when spindle and motor are directly coupled)
bit6-5: Synchronous tapping zero point return direction
  bit 6,5=
  00: Short-cut
  01: Forward run
  10: Reverse run

bit4: Designate zero point return
  0: Automatically return to zero point before synchronous tapping is started (tapping phase alignment)
  1: Not return to zero point and immediately synchronous tapping is started

bit3: Z phase detection operation ON
  0: When Z phase is not detected, detect Z phase during the rotation executed by a rotation command without performing the detection operation.
  1: When Z phase is not detected, perform the detection operation according to the settings of bitC and bit0, and then rotate the motor according to a rotation command.

bit2-1: Orientation direction
  bit 2,1=
  00: Short-cut
  01: Forward run
  10: Reverse run

bit0: Z phase detection direction
  0: Forward direction
  1: Reverse direction

---Setting range---
  1 to 99999 (r/min)

The orientation stop position can be moved by this parameter setting although normally the position is Z-phase position.
During multi-point orientation control, the stop position is determined by the total value of this parameter and the position data for multi-point orientation of PLC input.

---Setting range---
  -35999 to 35999 (0.01°)

For the first S command after power is turned ON, the spindle rotates at the speed of setting value for this parameter until Z phase is detected twice.
When "#3106/bitF = 1" (Spindle zero point proximity switch detection enabled), also proximity switch is detected.

(Note) When spindle zero point proximity switch detection is enabled, the rotation direction of the orientation/zero point return (synchronous tapping, spindle/C axis) will follow Z phase detection direction. And the speed will follow Z phase detection speed.

---Setting range---
  1 to 99999 (r/min)

Set the zero point return speed during synchronous tapping control.

---Setting range---
  1 to 99999 (r/min)
### #3111 tap_sft  Synchronous tapping zero point return shift amount

Set the zero point return shift amount during synchronous tapping control. Zero point angle shifts from Z phase according to the setting angle.

---Setting range---
0 to 359999 (0.01°)

### #3112 cax_spd  Spindle C axis zero point return speed

Set the zero point return speed during spindle C axis control.

---Setting range---
1 to 999999 (r/min)

### #3113 cax_sft  Spindle C axis zero point return shift amount

Set the spindle C axis zero point return shift amount. Zero point angle shifts from Z phase according to the setting angle.

---Setting range---
0 to 359999 (0.001°)

### #3114 cax_para_chg  Spindle/C axis parameter switch

Parameter switches when switching the encoder system between normal spindle control and C axis control, such as using spindle side encoder only for C axis control in spindle drive system. It is validated with replacing a certain servo parameter of the corresponding servo axis to a spindle parameter.

0: Not switch
1: Switch

---Setting range---
0/1 (Standard: 0)

### #3115 sp2_t1  Time constant in orientation/interpolation mode automatic reference position return (Gear: 00)

Set the linear acceleration/deceleration time constant for zero point return control (#3106/bit4,8) which is automatically started at the time of switching orientation control, C axis control and synchronous tapping control when gear 00 is selected. The inclination is determined by the ratio to limit rotation speed (slimit1). Set the sufficiently large value compared to the acceleration/deceleration time constant with S command (sp_t1) so that the output torque is not saturated. When executing C axis zero point return manually, it depends on the axis specification parameter.

---Setting range---
0 to 30000 (ms)

### #3116 sp2_t2  Time constant in orientation/interpolation mode automatic reference position return (Gear: 01)

Set the linear acceleration/deceleration time constant for zero point return control (#3106/bit4,8) which is automatically started at the time of switching orientation control, C axis control and synchronous tapping control when gear 01 is selected. The inclination is determined by the ratio to limit rotation speed (slimit2). Set the sufficiently large value compared to the acceleration/deceleration time constant with S command (sp_t2) so that the output torque is not saturated. When executing C axis zero point return manually, it depends on the axis specification parameter.

---Setting range---
0 to 30000 (ms)

### #3117 sp2_t3  Time constant in orientation/interpolation mode automatic reference position return (Gear: 10)

Set the linear acceleration/deceleration time constant for zero point return control (#3106/bit4,8) which is automatically started at the time of switching orientation control, C axis control and synchronous tapping control when gear 10 is selected. The inclination is determined by the ratio to limit rotation speed (slimit3). Set the sufficiently large value compared to the acceleration/deceleration time constant with S command (sp_t3) so that the output torque is not saturated. When executing C axis zero point return manually, it depends on the axis specification parameter.

---Setting range---
0 to 30000 (ms)

|           |                       | When performing high-speed synchronous tapping control (#1281/bit5), set the reduction rate of the time constant compared to the time constant in normal synchronous tapping.  
(Setting "0" or "100" will be regarded as reduction rate zero, so the time constant won't be reduced.)  
E.g.) When set to "10", time constant in high-speed synchronous tapping will be 90% of that in normal synchronous tapping. |
|           | Setting range         | 0 to 100 (%)                                                               |
| #3121     | tret                  | Turret indexing                                                             |
|           |                       | Select the validity of turret indexing.  
0: Disabled  
1: Enable |
| #3122     | GRC                   | Turret side gear ratio                                                       |
|           |                       | Set the number of teeth on the turret side when the gear selection command (control input 4/bit6, 5) is set to 00. Set a value of GRC so that the ratio of GRC to the spindle side gear ratio (#13057 SP057) will be 1: N (an integer). If GRC is set to "0", it will be regarded as "1". |
|           | Setting range         | 0 to 32767                                                                 |
| #3123     | tret_spd              | Turret indexing speed                                                        |
|           |                       | Set the turret end indexing speed when in turret indexing.  
When this parameter is set to 0, it follows the value set for Orientation command speed (#3107). |
|           | Setting range         | 0 to 32767 (r/min)                                                          |
| #3124     | tret_t                | Turret indexing time constant                                                |
|           |                       | Set the acceleration/deceleration time constant to reach Limit rotation speed (slimit1) at gear 00 when in turret indexing. Set this parameter to a larger value than time constant in orientation (#3115). |
|           | Setting range         | 0 to 30000 (ms)                                                             |
| #3125     | tret_inpos            | Turret indexing in-position width                                           |
|           |                       | Set the position error range in which the index positioning complete signal is output when in turret indexing.  
When this parameter is set to 0, the value of In-position width (#13024 SP024) will be used for this width. |
|           | Setting range         | 0 to 32767(1°/1000)                                                         |
| #3126     | tret_fin_off          | Index positioning complete signal OFF time                                  |
|           |                       | Set the time to forcibly turn OFF the index positioning complete signal since the indexing start signal turns ON. If this period of time has not passed yet, the index positioning complete signal will not turn ON even at the completion of index positioning. |
|           | Setting range         | 0 to 10000 (ms)                                                             |
bit3: Spindle rotation direction
Define the relationship between the motor's actual direction of rotation and the spindle rotation signals (Spindle forward run start/Spindle reverse run start).
0: Forward direction
1: Reverse direction

bit1: Spindle cycle counter direction
Specify whether the cycle counter counts up or down during the spindle forward run.
0: Count up during forward run
1: Count down during forward run

bit0: Output conditions of spindle changeover mode and spindle speed reach signals
0: Conventional operation
  • Spindle changeover mode signal
    When the spindle stop signal is ON and when a gear recommended by NC and the one selected in ladder program are different, the spindle changeover mode signal is output to the spindle drive unit.
  • Spindle speed reach signal
    Spindle speed reach signal is turn ON/OFF according to the FB signal.
1: Operation when the gear responds to the neutral state under full-closed control
  • Spindle changeover mode signal
    When both the spindle stop signal and the spindle gear shift signal are ON, the spindle changeover mode signal is output to the spindle drive unit.
  • Spindle speed reach signal
    During gear changeover (while gear changeover is being commanded), the spindle speed reach signal is turned ON/OFF according to the virtual spindle-end speed that is calculated by multiplying the motor-end speed by the gear ratio (motor-end gear teeth/spindle-end gear teeth).
---Setting range---
0x0000 to 0xffff (hexadecimal)

### #3129  cax_spec  Spindle/C axis control specification

**bit4: Gain switchover for all the axes within the part system when C axis is selected**

0: The gains of servo axes except C axis are not switched when C axis is selected.
1: The gains of servo axes except C axis are switched when C axis is selected.

#2203(PGN1) SV003 --#2249(PGN1sp) SV049
#2204(PGN2) SV004 --#2250(PGN2sp) SV050
#2257(SHGC) SV057 --#2258(SHGCsp) SV058

**bit3: Mode selection at reset when the program command method is selected**

0: Spindle mode
1: The mode at reset is retained.
This parameter is enabled when the program command method is selected (#3129 cax_spec/bit0=1).

**bit2: Mode selection at Power ON when the program command method is selected**

0: Spindle mode
1: C axis mode
This parameter is enabled when the program command method is selected (#3129 cax_spec/bit0=1).

**bit1: Coordinate system setting when the deceleration stop type (no zero point return) is selected**

Select the C axis coordinate system setting method when the deceleration stop type (no zero point return) is selected.

0: Establish the coordinates of the deceleration stop position by using the Z-phase position as the coordinate zero point.
1: The deceleration stop position is used as the coordinate zero point.

**bit0: Spindle position control changeover method**

Select the method of changing the mode between C axis and spindle.

0: PLC signal method
1: Program command method

### #3130  syn_spec  Spindle synchronization control specification

**bit2: Error compensation between reference and synchronized spindles**

0: Error compensation is performed.
1: Error compensation is not performed.
*Set this parameter for the synchronized spindle.

**bit1: Phase alignment method selection**

0: Phase alignment method type 1 (step alignment method)
1: Phase alignment method type 2 (multi-step acceleration/deceleration method)
*Set this parameter for the synchronized spindle.

**bit0: Tool spindle synchronization II (hobbing) automatic compensation selection**

0: No compensation.
1: Compensate hobbing axis delay (advance) with workpiece axis.

### #3131  tap_spec  Synchronous tapping control specification

Not used. Set to "0000".

### #3132  ori_inp2  2nd in-position width for orientation

Set the in-position width when in-position advance output control (#3128/bit0) is valid. Reduce the orientation time by setting a bigger value than the value of conventional SP024 and detecting an in-position faster.

Conventional SP024 is used for 2nd in-position signal detection width.

---Setting range---

0 to 32767 (1deg/1000)

Set the time constant to reach the limit rotation speed at gear 11.

---Setting range---
0 to 30000 (10 ms)

Spindle synchronization acceleration/deceleration time constant (Gear: 01)

Specify the acceleration/deceleration time constant to be used when the rotation speed of spindle synchronization command is changed with the 2nd gear selected under the spindle-mode servo control or spindle synchronization control.

---Setting range---
0 to 9999 (ms)

Specify the spindle speed at which a changeover to the 1st step's acceleration/deceleration time constant is made when the 2nd step gear is selected.

---Setting range---
0 to 99999 (r/min)

Specify the spindle speed at which a changeover to the 2nd step's acceleration/deceleration time constant is made when the 2nd step gear is selected.

---Setting range---
0 to 99999 (r/min)

Specify the spindle speed at which a changeover to the 3rd step's acceleration/deceleration time constant is made when the 2nd step gear is selected.

---Setting range---
0 to 99999 (r/min)

Specify the spindle speed at which a changeover to the 4th step's acceleration/deceleration time constant is made when the 2nd step gear is selected.

---Setting range---
0 to 99999 (r/min)

Specify the spindle speed at which a changeover to the 5th step's acceleration/deceleration time constant is made when the 2nd step gear is selected.

---Setting range---
0 to 99999 (r/min)

Specify the spindle speed at which a changeover to the 6th step's acceleration/deceleration time constant is made when the 2nd step gear is selected.

---Setting range---
0 to 99999 (r/min)

Normally SP005(VGN1) is used. By setting "SP035/bit1, SP035/bit9 or SP036/bit1=1", gain 2 can be used according to the application. Gain 2 can also be used by setting "Speed gain set 2 changeover request (control input 5/ bitC) = 1". Refer to SP005(VGN1) for adjustment procedures.

---Setting range---
1 to 9999

Not used. Set to "0".

---Setting range---
0 to 32767

Set the minimum value for the variable excitation rate. The standard setting is "50". Set to "0" when using an IPM spindle motor.

(Note) When setting a value at "50 or more", check if there is no problem with gear noise, motor excitation noise, vibration during low-speed rotation or vibration when the servo is locked during orientation stop, etc. When setting a value at "less than 50", check if there is no problem with the impact load response or rigidity during servo lock.

---Setting range---
0 to 100 (%)

Normally SP014(PY1) is used. By setting "SP035/bit2, SP035/bitA or SP036/bit2=1", the excitation rate 2 can be used according to the application. The excitation rate 2 can also be used by setting "the minimum excitation rate 2 changeover request (control input 5/ bitB) = 1". Refer to SP014(PY1) for adjustment procedures.

---Setting range---
0 to 100 (%)
Set the single-rotation position alignment deceleration rate for orientation stopping, phase alignment while rotating and switching from non-interpolation mode to spindle synchronization mode while rotating. When the load inertia is larger, the setting value should be smaller. When the setting value is larger, the orientation in-position and single-rotation position alignment complete faster, but the impact applied on the machine will increase. To change the deceleration rate only during rotation command (command $F \Delta T \neq 0$), set this parameter together with SP070 (KDDT).

---Setting range---
1 to 32767 (0.1(r/min)/ms)

---Setting range---

</table>
Select the spindle specification. A function is allocated to each bit. Set this in hexadecimal format.

Bit F-A:
- Not used. Set to "0".

Bit 9: mpg  Earth fault detection
- 0: Disable  1: Enable (standard)
- Set "0" and it is constantly "Enable" for MDS-EJ-SP Series.

Bit 8: spsu  Command speed limit value
- 0: 33,750 r/min  1: 135,000 r/min

Bit 7-6:
- Not used. Set to "0".

Bit 5: mkch  Coil switch function
- 0: Disable  1: Enable

Bit 4-2:
- Not used. Set to "0".

Bit 1: oplp  Open loop control
- This allows the operation in which no encoder feedback signals are used.
- It is used when adjusting the encoder, etc.
- 0: Disable  1: Enable

Bit 0:
- Not used. Set to "0".

---Setting range---

When SP097=0, the setting range is from 0 to 32767 (kp)
When SP097#0, the setting range is from 0 to 65535 (p)
Set the number of pulses per revolution of the motor side encoder. Set the standard parameters for the motor with frame.

---Setting range---
When SP098=0, the setting range is from 0 to 32767 (kp)
When SP098#0, the setting range is from 0 to 65535 (p)

Set the detection time constant of Overload 1 (Alarm 50). (For Mitsubishi adjustment)
Normally, set to "60".
Set to "300" when using an IPM spindle motor.

---Setting range---
1 to 15300 (s)

Set the current detection level of "Overload 1" (Alarm 50) as a percentage against the motor short-time rated output current. (For Mitsubishi adjustment)
Normally, set to "120".
Set to "100" when using an IPM spindle motor.

---Setting range---
1 to 200 (Short-time rated %)

Set the excessive error detection width for the interpolation mode and spindle synchronization.
The standard setting is "120".
When set to "0", the excessive error detection will be ignored, so do not set to "0".

---Setting range---
1 to 32767 (°)

Set the in-position detection width.
Set the positioning accuracy required to the machine.
Lower setting value increases the positioning accuracy, but makes the cycle time (settling time) longer.
The standard setting is "875".

---Setting range---
0 to 32767 (1°/1000)

Use this when detecting an in-position different from normal in-position width such as advancing the in-position signal. The adjustment procedure is the same as SP024 (INP).
The standard setting is "875".

---Setting range---
0 to 32767 (1°/1000)

Set the maximum motor speed.
If the motor speed exceeds the set maximum speed, an overspeed alarm will occur.

---Setting range---
1 to 32767 (r/min)

Set the motor speed for detecting zero speed.
If the motor speed drops below the set speed, the zero speed signal turns ON.
The standard setting is "50".

---Setting range---
1 to 1000 (r/min)
Set the motor speed for detecting the speed. If the motor speed drops below the set speed, the speed detection signal turns ON. The standard setting is 10% of the maximum motor speed.

---Setting range---
10 to 32767 (r/min)

Set the hysteresis width in which the speed detection changes from ON to OFF. If the setting value is small, the speed detection will chatter easily. The standard setting is "30".

---Setting range---
10 to 1000 (r/min)

Set the specified speed of the specified speed output. When carrying out digital output of the specified speed output, set SP229/bitC to "1". It is not available for MDS-EJ-SP Series.

---Setting range---
0 to 32767 (r/min)

Set the control system of the spindle drive unit.
2200: Semi closed loop control
4200: Full closed loop control by using spindle side ABZ pulse output encoder
6200: Full closed loop control by using spindle side serial output encoder
### MDS-E/EH Series: Power supply type

When connecting a power supply unit, set a code for each power supply unit.

- **bit F-C : amp**
  - Set the power backup function to be used.
    - No function used : 0
    - Deceleration and stop function at power failure : 8
    - Retraction function at power failure: C

- **bit B-8 : rtyp**
  - Not used. Set to "0".

### bit 7-0 : ptyp External emergency stop setting

When the emergency stop input signal of the power supply unit is "disabled"

- Power supply unit is not connected : 00
- MDS-E-CV-37 / MDS-EH-CV-37 : 04
- MDS-E-CV-75 / MDS-EH-CV-75 : 08
- MDS-E-CV-110 / MDS-EH-CV-110 : 11
- MDS-E-CV-185 / MDS-EH-CV-185 : 19
- MDS-E-CV-300 / MDS-EH-CV-300 : 30
- MDS-E-CV-370 / MDS-EH-CV-370 : 37
- MDS-E-CV-450 / MDS-EH-CV-450 : 45
- MDS-EH-CV-750 : 75

When the emergency stop input signal of the power supply unit is "enabled"

(Note) Set the power supply rotary switch to "4".

- Power supply unit is not connected : 00
- MDS-E-CV-37 / MDS-EH-CV-37 : 44
- MDS-E-CV-75 / MDS-EH-CV-75 : 48
- MDS-E-CV-110 / MDS-EH-CV-110 : 51
- MDS-E-CV-185 / MDS-EH-CV-185 : 59
- MDS-E-CV-300 / MDS-EH-CV-300 : 70
- MDS-E-CV-370 / MDS-EH-CV-370 : 77
- MDS-E-CV-450 / MDS-EH-CV-450 : 85
- MDS-E-CV-550 / MDS-EH-CV-550 : 95
- MDS-EH-CV-750 : B5

### MDS-EM/EMH Series: Power supply type

Set as follows for the spindle drive section of the MDS-EM/EM-H-SPV3.

- **bit F-C : amp**
  - Not used. Set to "0".

- **bit B-8 : rtyp**
  - Not used. Set to "0".

### bit 7-0 : ptyp External emergency stop setting

- Normal
  - External emergency stop function
MDS-EJ-SP Series: Regenerative resistor type

Set the regenerative resistor type.

| Bit- | F | E | D | C | B | A | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
|      |   |   |   |   |   |   | 0 | 0 | 0 |

**bit F-8 :** amp(bit F-C) / rtyp(bit B-8)

- Setting prohibited: 10-12
- MR-RB12 or GZG200W39OHMK: 13
- MR-RB32 or GZG200W120OHMK 3 units connected in parallel: 14
- MR-RB30 or GZG200W39OHMK 3 units connected in parallel: 15
- MR-RB50 or GZG300W39OHMK 3 units connected in parallel: 16
- Setting prohibited: 17-1F
- Setting prohibited: 20-23
- FCUA-RB22: 24
- FCUA-RB37: 25
- FCUA-RB55: 26

- FCUA-RB75/2 2 units connected in parallel: 2D
- FCUA-RB55/2 2 units connected in parallel: 2E
- Setting prohibited: 2F

**bit 7-4 :** emgx External emergency stop function

Set the external emergency stop function.

- 0: Disable 4: Enable

**bit 3-0 :**

Not used. Set to "0".
Select the spindle specification. A function is allocated to each bit. Set this in hexadecimal format.

**bit F-C**: Not used. Set to "0".

**bit B-A**: ovs Overshoot compensation
- Set this parameter when overshooting occurs during positioning.
  - bit B,A=
    - 00: Compensation stop
    - 01: Setting prohibited
    - 10: Setting prohibited
    - 11: Compensation type 3

  Set the compensation amount in SP043(OVS1) and SP042(OVS2).

**bit 9-8**: lmc Lost motion compensation type2
- Set this parameter when the protrusion at quadrant change is too large.
  - bit 9,8=
    - 00: Compensation stop
    - 01: Setting prohibited
    - 10: Compensation type 2
    - 11: Setting prohibited

  Set the compensation amount in SP048(LMC1) and SP041(LMC2).

**bit 7**: lmc2a Lost motion compensation 2 timing
- 0: Normal 1: Change

**bit 6**: Not used. Set to "0".

**bit 5-4**: vfct Jitter compensation pulse number
- Suppress vibration by machine backlash when axis stops.
  - bit 5,4=
    - 00: Disable
    - 01: 1 pulse
    - 10: 2 pulse
    - 11: 3 pulses

**bit 3-0**: Not used. Set to "0".
Select the spindle function.
A function is allocated to each bit.
Set this in hexadecimal format.

1: Select Excitation rate 2

bit 1 : vgin Speed loop gain set selection in non-interpolation mode

The speed loop gain set after the in-position can be selected.  
0: Select Set 1  
1: Select Set 2

bit 0 :  
Not used. Set to "0".
### 16 Machine Parameters

#### #13036 SP036 SFNC4 Spindle function 4

Select the spindle function. A function is allocated to each bit. Set this in hexadecimal format.

| Bit-F | E | D | C | B | A | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-------|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
|       |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |

- **bit F-8**: Not used. Set to "0".
- **bit 7**: mksl Coil selection in spindle synchronization mode
  - 0: Select the coil commanded during synchronization
  - 1: Select high-speed coil
- **bit 6**: rtt_vgns Real-time tuning 1 in spindle synchronization mode / speed gain adaptation stop
  - 0: Stop
  - 1: Start
- **bit 5**: Not used. Set to "0".
- **bit 4**: shgs SHG control in spindle synchronization mode
  - 0: Stop
  - 1: Start
  - When using the OMR-FF control, set to "0".
- **bit 3**: Not used. Set to "0".
- **bit 2**: pys Excitation rate selection in spindle synchronization mode
  - 0: Select Excitation rate 1
  - 1: Select Excitation rate 2
- **bit 1**: vgs Speed loop gain set selection in spindle synchronization mode
  - 0: Select Set 1 (SP005,SP006,SP007)
  - 1: Select Set 2 (SP008,SP009,SP010)
- **bit 0**: Not used. Set to "0".

#### #13037 SP037 JL Load inertia scale

Set the motor axis conversion total load inertia including motor itself in proportion to the motor inertia. SV037(JL)=(Jm+Jl)/Jm×100
- Jm: Motor inertia
- Jl: Motor axis conversion load inertia

---Setting range---
- 0 to 5000 (%)

#### #13038 SP038 FHz1 Notch filter frequency 1

Set the vibration frequency to suppress when machine vibration occurs. (Enabled at 50 or more.)
- When not using, set to "0".

- Related parameters: SP034/bit3-1

---Setting range---
- 0 to 5000 (Hz)

#### #13039 SP039 LMCD Lost motion compensation timing

Set this parameter when the lost motion compensation type2 timing does not match. Adjust by increasing the value by 10 at a time.

---Setting range---
- 0 to 2000 (ms)
**#13040** SP040 LMCT  
Lost motion compensation non-sensitive band

Set the non-sensitive band of the lost motion compensation in the feed forward control.  
When "0" is set, 2°/1000 is set. Adjust by increasing the value by 1°/1000 at a time.

---Setting range---

-32768 to 32767 (1°/1000)

---#13041 SP041 LMC2---

Lost motion compensation 2

Set this parameter with SP048(LMC1) only to vary the lost motion compensation amount depending on the command directions.  
Normally, set to "0".

---Setting range---

-1 to 200 (Short-time rated %)  
Note that when SP227/bit2 is "1", the range will be -1 to 20000 (Short-time rated 0.01%).

---#13042 SP042 OVS2---

Overshooting compensation 2

Set this parameter with SP043(OVS1) only to vary the lost motion compensation amount depending on the command directions.  
Normally, set to "0".

---Setting range---

-1 to 100 (Short-time rated %)  
Note that when SP227/bit2 is "1", the range will be -1 to 10000 (Short-time rated 0.01%).

---#13043 SP043 OVS1---

Overshooting compensation 1

Set this parameter when overshooting occurs during positioning. This compensates the motor torque during positioning.  
This is valid only when the overshooting compensation SP033 (SFNC1/ovs) is selected.

[Type 3 "When SP033/ bitB.A=11"]  
Use this when performing overshoot compensation in the feed forward control during arc cutting mode.  
Set the compensation amount based on the motor short-time rated current.  
Increase the value in increments of 1% to find the value where overshooting ceases.

[To vary compensation amount depending on the direction]  
When SV042 (OVS2) is "0", change the SP043 (OVS1) value in both +/- directions to compensate.  
To change the compensation amount depending on the command direction, set this with SP042 (OVS2).  
(SP043: + direction, SP042: - direction, However, the directions may be opposite depending on other settings.)  
When "-1" is set, the compensation will not be performed in the command direction.

---Setting range---

-1 to 100 (Short-time rated %)  
Note that when SP227/bit2 is "1", the range will be -1 to 10000 (Short-time rated 0.01%).

---#13044 SP044 OBS2---

Disturbance observer gain

Set the disturbance observer gain. The standard setting is "100".  
To use the disturbance observer, also set SP037(JL), SP045(OBS1) and SP226/ bitE.  
When not using, set to "0".

---Setting range---

0 to 500 (%)  

---#13045 SP045 OBS1---

Disturbance observer filter frequency

Set the disturbance observer filter band.  
Normally, set to "100".  
To use the disturbance observer, also set SP037(JL), SP044(OBS2) and SP226/ bitE.  
When not using, set to "0".

---Setting range---

0 to 1000 (rad/s)
### #13046 SP046 FHz2 Notch filter frequency 2

Set the vibration frequency to suppress when machine vibration occurs.
(Enabled at 50 or more.)
When not using, set to "0".

Related parameters: SP034/bit7-5

--- Setting range ---

<table>
<thead>
<tr>
<th>Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to 5000 (Hz)</td>
<td></td>
</tr>
</tbody>
</table>

### #13047 SP047 EC Inductive voltage compensation gain

Set the inductive voltage compensation gain. Normally, set to "100".
Lower the gain when the current FB peak exceeds the current command peak.

--- Setting range ---

<table>
<thead>
<tr>
<th>Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to 200 (%)</td>
<td></td>
</tr>
</tbody>
</table>

### #13048 SP048 LMC1 Lost motion compensation 1

Set this parameter when the protrusion (that occurs due to the non-sensitive band by friction, torsion, backlash, etc.) at quadrant change is too large.
This sets the compensation torque at quadrant change (when an axis feed direction is reversed) by Short-time rated %.
Whether to enable the lost motion compensation and the method can be set with other parameters.

[Type 2 "When SP033/bit9,8=10"]
Set the compensation amount based on the motor short-time rated current.
The standard setting is double of the friction torque. The compensation amount will be 0 when "0" is set.

Related parameters: SP033/bit9-8, SP039, SP040, SP041, SP227/bit2

[To vary compensation amount depending on the direction]
When SP041 (LMC2) is "0", change SP048 (LMC1) value in both of +/- directions to compensate.
To vary the compensation amount depending on the command direction, set this with SP041 (LMC2).
(SP048: + direction, SP041: - direction, However, the directions may be opposite depending on other settings.)
When "-1" is set, the compensation will not be performed in the command direction.

--- Setting range ---

<table>
<thead>
<tr>
<th>Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-1 to 200 (Short-time rated %)</td>
<td>Note that when SP227/bit2 is &quot;1&quot;, the range will be -1 to 20000 (Short-time rated 0.01%).</td>
</tr>
</tbody>
</table>

### #13049 SP049 FFC Acceleration rate feed forward gain

When a relative error in the synchronous control is too large, set this parameter to the axis that is delaying.
The standard setting is "0". The standard setting in the SHG control is "50".
Adjust relative errors in acceleration/deceleration by increasing the value by 50.

--- Setting range ---

<table>
<thead>
<tr>
<th>Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to 999 (%)</td>
<td></td>
</tr>
</tbody>
</table>

### #13050 SP050 TOF Torque offset

Set the imbalance torque.

--- Setting range ---

<table>
<thead>
<tr>
<th>Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-100 to 100 (Short-time rated %)</td>
<td></td>
</tr>
</tbody>
</table>

### #13051 SP051 DFBT Dual feed back control time constant

Set the control time constant in dual feed back.
When the function is valid, the standard setting is "100". When "0" is set, the value is 1 ms.
When the time constant is increased, the operation will get closer to the semi-closed control and the limit of the position loop gain will be raised.
However, this cannot be used when the spindle slip occurs in machine configuration such as V-belt drive.

Related parameters: SP017/bit1, SP052

--- Setting range ---

<table>
<thead>
<tr>
<th>Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to 9999 (ms)</td>
<td></td>
</tr>
</tbody>
</table>
### #13052 SP052 DFBN  
**Dual feedback control non-sensitive band**

Set the non-sensitive band in the dual feedback control. Normally set to "0".

Related parameters: SP017/bit1, SP051

--- **Setting range** ---

0 to 9999 (1/1000°)

### #13053 SP053 ODS  
**Excessive error detection width (non-interpolation mode)**

Set the excessive error detection width in non-interpolation mode. Standard setting value: ODS = Maximum motor speed [r/min] × 6/PGV/2

When set to "0", the excessive error detection will not be performed.

--- **Setting range** ---

0 to 32767 (°)

### #13054 SP054 ORE  
**Overrun detection width in closed loop control**

Set the overrun detection width in the full-closed loop control. When the gap between the motor side encoder and the machine side encoder exceeds the set value, it is judged as an overrun and "Alarm 43" is detected.

When "-1" is set, if the differential velocity between the motor side encoder and the machine side encoder exceeds the 30% of the maximum motor speed, it will be judged as overrun and "Alarm 43" will be detected. When "0" is set, overrun will be detected with 2°.

In the full-closed loop control, normally set this parameter to "360". During V-belt drive, set to "-1".

--- **Setting range** ---

-1 to 32767 (°)

### #13055 SP055 EMGx  
**Max. gate off delay time after emergency stop**

Set the time required to forcibly execute READY OFF after the emergency stop is input. Normally set to "5000".

When 5000ms or more is set for deceleration time constant at emergency stop(SP056), set the same value as SP056.

When using the power backup system (MDS-D/DH-PFU) and setting the value of this parameter to 5000ms or more, a communication error between NC and drive unit may occur when power restarts after a instantaneous power interrupt.

It is not a problem so turn the NC power ON again to start up.

When "0" is set, 7000ms is the actual value to be set.

Related parameters: SP056, SP230

--- **Setting range** ---

0 to 29900 (ms)

### #13056 SP056 EMGt  
**Deceleration time constant at emergency stop**

Set the time constant used for the deceleration control at emergency stop. Set the time required to stop from the maximum motor speed (TSP).

When "0" is set, the deceleration control is executed with "7000ms".

Related parameters: SP055, SP230

--- **Setting range** ---

0 to 29900 (ms)

### (PR) #13057 SP057 GRA1  
**Spindle side gear ratio 1**

Set the number of gear teeth on the spindle side when "the gear selection command (control input 4/bit6, 5)" is set to "00".

--- **Setting range** ---

1 to 32767

### (PR) #13058 SP058 GRA2  
**Spindle side gear ratio 2**

Set the number of gear teeth on the spindle side when "the gear selection command (control input 4/bit6, 5)" is set to "01".

--- **Setting range** ---

1 to 32767
### 16 Machine Parameters

#### (PR) #13059 SP059 GRA3  Spindle side gear ratio 3
Set the number of gear teeth on the spindle side when "the gear selection command (control input 4/bit6, 5)" is set to "10".
---Setting range---
1 to 32767

#### (PR) #13060 SP060 GRA4  Spindle side gear ratio 4
Set the number of gear teeth on the spindle side when "the gear selection command (control input 4/bit6, 5)" is set to "11".
---Setting range---
1 to 32767

#### (PR) #13061 SP061 GRB1  Motor side gear ratio 1
Set the number of gear teeth on the motor side when "the gear selection command (control input 4/bit6, 5)" is set to "00".
---Setting range---
1 to 32767

#### (PR) #13062 SP062 GRB2  Motor side gear ratio 2
Set the number of gear teeth on the motor side when "the gear selection command (control input 4/bit6, 5)" is set to "01".
---Setting range---
1 to 32767

#### (PR) #13063 SP063 GRB3  Motor side gear ratio 3
Set the number of gear teeth on the motor side when "the gear selection command (control input 4/bit6, 5)" is set to "10".
---Setting range---
1 to 32767

#### (PR) #13064 SP064 GRB4  Motor side gear ratio 4
Set the number of gear teeth on the motor side when "the gear selection command (control input 4/bit6, 5)" is set to "11".
---Setting range---
1 to 32767

#### #13065 SP065 TLM1  Torque limit 1
Set the torque limit value when the torque limit (spindle control input 1/bitA, 9, 8) is set to "001" (TL3, TL2, TL1 = 001).
---Setting range---
0 to 999 (Short-time rated %)

#### #13066 SP066 TLM2  Torque limit 2
Set the torque limit value when the torque limit (spindle control input 1/bitA, 9, 8) is set to "010" (TL3, TL2, TL1 = 010).
---Setting range---
0 to 999 (Short-time rated %)

#### #13067 SP067 TLM3  Torque limit 3
Set the torque limit value when the torque limit (spindle control input 1/bitA, 9, 8) is set to "011" (TL3, TL2, TL1 = 011).
---Setting range---
0 to 999 (Short-time rated %)

#### #13068 SP068
Not used.
Set the single-rotation position alignment completion width for phase alignment and changing from non-interpolation to spindle synchronization mode during rotation.
Set the rotation error that is required to the machine.
When the setting value decreases, the rotation error will decrease, but the cycle time (settling time) will get longer. The standard setting is “875”.

---Setting range---
0 to 32767 (1°/1000)

Set the scale for SP016 (DDT) to change the deceleration rate only during rotation command (command F Δ T ≠ 0).
When the setting value increases, the single-rotation position alignment will be completed faster, but the impact to the machine will also increase. When not using, set to "0".

---Setting range---
0 to 255 (1/16-fold)

Set this parameter to adjust the deceleration time by changing the current limit value during deceleration depending on the motor speed.
As shown below, set the lower limit rate of the current limit in SP071 (DIQM), and use with SP072 (DIQN). When DIQM is set to 100%, the standard current limit value in deceleration (SP152) is applied.

---Setting range---
0 to 999 (%)
If noise is bothersome during high speed rotation, it may be reduced by lowering the speed loop gain at high speed. Set this value to ensure the adequate response by suppressing noise and vibration at low speeds and increasing the speed loop gain at high speeds for a high-speed spindle of machining center, etc. As shown below, set the speed loop gain rate for the overspeed detection speed in SP073 (VGVN), and use with SP074 (VGVS). When not using, set to “0”. The overspeed detection speed (VLMT) is 115% of the maximum motor speed (TSP). This function can be used when either Speed loop gain set 1 or Speed loop gain set 2 is selected.

---Setting range---
0 to 999 (%)

---Setting range---
0 to 32767 (r/min)

Set the slip frequency scale during deceleration. Normally, set to “0”. (For Mitsubishi adjustment)

---Setting range---
0 to 255 (1/16-fold)
### #13076 SP076 DWSL
Slip compensation scale during regeneration low-speed coil

Set the slip frequency scale at deceleration when using the low-speed coil. Normally, set to "0". (For Mitsubishi adjustment)

---Setting range---
0 to 255 (1/16-fold)

### #13077 SP077 IQA
Q axis current lead compensation

Set the current loop gain. To use the coil switch function, set the current loop gain for when the high-speed coil is selected. The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used. Set the value given in the spindle parameter list. (For Mitsubishi adjustment)

---Setting range---
1 to 20480

### #13078 SP078 IDA
D axis current lead compensation

Set the current loop gain. To use the coil switch function, set the current loop gain for when the high-speed coil is selected. The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used. Set the value given in the spindle parameter list. (For Mitsubishi adjustment)

---Setting range---
1 to 20480

### #13079 SP079 IQG
Q axis current gain

Set the current loop gain. To use the coil switch function, set the current loop gain for when the high-speed coil is selected. The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used. Set the value given in the spindle parameter list. (For Mitsubishi adjustment)

---Setting range---
1 to 8192

### #13080 SP080 IDG
D axis current gain

Set the current loop gain. To use the coil switch function, set the current loop gain for when the high-speed coil is selected. The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used. Set the value given in the spindle parameter list. (For Mitsubishi adjustment)

---Setting range---
1 to 8192

### #13081 SP081 IQAL
Q axis current lead compensation low-speed coil

When using coil switch function, set the current loop gain for when the low-speed coil is selected. The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used. Set the value given in the spindle parameter list. (For Mitsubishi adjustment)

---Setting range---
1 to 20480

### #13082 SP082 IDAL
D axis current lead compensation low-speed coil

When using coil switch function, set the current loop gain for when the low-speed coil is selected. The setting value is determined by the motor's electrical characteristics so that the value is fixed to each motor used. Set the value given in the spindle parameter list. (For Mitsubishi adjustment)

---Setting range---
1 to 20480

In the magnetic pole position detection function, the command motor speed and motor speed during the position command stop are monitored.

Set the command motor speed level and motor speed level during the position command stop in "r/min" unit. When the command motor speed level is set to "0", the magnetic pole position error is detected at 10r/min. Set to "10" as a standard setting when the magnetic pole position error detection function is enabled. This detects the magnetic pole position error when the motor speed is "100r/min".

Ten-thousands digit, Thousands digit ----------- Command motor speed level (10r/min)
Hundreds digit, Tens digit, Ones digit ----------- Motor speed level (10r/min)
---Setting range---
0 to 31999

Set the magnification against delay/lead compensation (SP006) of the high-response acceleration/deceleration (valid when SP226/ bitD is set to "1").

Normally, set to "0". Set this parameter to suppress overshooting when the speed is reached.
---Setting range---
0 to 10000 (0.01%)

When the spindle slows down due to multiple cutting, set the processable speed as percentage against the NC command speed.

When "0" is set, the magnification is the same as when "85" is set. When set to "-1", the allowable width will be disabled.
---Setting range---
-1.0 to 100(\%)

When setting the machine side encoder resolution in pulse (p) unit, set the number of pulses to four bite data of SP097 (high-order) and SP019 (low-order) in pulse (p) unit.

When SP097=0, the setting unit of SP019 is (kp). Refer to SP019 for details.
Related parameters: SP019, SP020, SP098
---Setting range---
-1 to 32767

When setting the motor side encoder resolution in pulse (p) unit, set the number of pulses to four bite data of SP098 (high-order) and SP020 (low-order) in pulse (p) unit.

When SP098=0, the setting unit of SP020 is (kp). Refer to SP020 for details.
Related parameters: SP019, SP020, SP097
---Setting range---
-1 to 32767

SP099-SP105
Not used. Set to "0".

Set the scale model gain (position response) in OMR-FF control. Set the same value as SV002(PGN).
Increase the setting value to perform a high-speed machining such as a fine arc or to improve the path error. Lower the value when vibration occurs during acceleration/deceleration. Set to "0" when not using OMR-FF control.
---Setting range---
0 to 300 (rad/s)
#13107-13111
SP107-SP111
Not used. Set to "0".

#13112 SP112 IFF
OMR-FF current feed forward gain
Set the current feed forward rate in OMR-FF control.
The standard setting is "10000".
Setting value of 0 is equal to "10000(100%)" setting.
Set to "0" when not using OMR-FF control.
---Setting range---
0 to 32767 (0.01%)

#13113 SP113 OPLP
Current command value for open loop
Set the current command value for when the open loop control is enabled.
When "0" is set, the state will be the same as when "50" is set.
When not using, set to "0".
The open loop control is enabled when "SP018/bit1" is set to "1".
---Setting range---
0 to 999 (Short-time rated %)

#13114 SP114 MKT
Coil changeover gate cutoff timer
Set the time required to cut off the gate when turning OFF/ON the coil switch contactor.
The value should be longer than the coil switch contactor's OFF/ON time.
The standard setting is "150".
---Setting range---
0 to 3500 (ms)

#13115 SP115 MKT2
Coil changeover current limit timer
Set the time required to limit the current immediately after the coil switch contactor ON/OFF is completed and the gate is turned ON.
The standard setting is "250".
---Setting range---
0 to 3500 (ms)

#13116 SP116 MKIL
Coil changeover current limit value
Set the time required to limit the current immediately after the coil switch contactor ON/OFF is completed and the gate is turned ON.
The standard setting is "120".
---Setting range---
0 to 999 (Short-time rated %)

#13117 SP117 SETM
Excessive speed deviation timer
Set the time to detect the speed excessive error alarm.
Set the time required to the machine.
The standard setting is "12".
---Setting range---
0 to 60 (s)

(PR) #13118 SP118 MSFT
Magnetic pole shift amount
Set the magnetic pole shift amount of IPM spindle motor.
During DC excitation of the initial setup: Set the same value displayed in the "AFLT gain" on the NC monitor screen in SP225/bit4=1.
When not using, set to "0".
---Setting range---
-18000 to 18000 (electrical angle 0.01°)

#13119 SP119
Not used. Set to "0".

#13120 SP120
Not used. Set to "0".

Set the base speed of the standard output to be displayed as 100% in load meter. When "0" is set, the base speed of the short-time rated output will be applied.

---Setting range---
0 to 32767 (r/min)

Not used. Set to "0".

In case that machine resonance is induced when mounting a workpiece, the speed loop gain is switched automatically in response to inertia by setting the speed loop gain and workpiece inertia multiplier in advance.

The speed loop gain SP199(RTGM) changes in response to the estimated inertia ratio SP200(RTJX) based on the speed loop gain SP005(VGN1) and the inertia multiplier SP037(JL) which were adjusted when no workpiece was mounted.

When SP199 is set to "0", the adaptation of the speed loop gain will be disabled.

Speed control gain multiplier [%]

---Setting range---
0 to 5000 (%)
In case that machine resonance is induced when mounting a workpiece, the speed loop gain is switched automatically in response to inertia by setting the speed loop gain and workpiece inertia multiplier in advance.

The speed loop gain SP199 (RTGM) changes in response to the estimated inertia ratio SP200 (RTJX) based on the speed loop gain SP005 (VGN1) and the inertia multiplier SP037 (JL) which were adjusted when no workpiece was mounted.

When SP199 is set to "0", the adaptation of the speed loop gain will be disabled.

Related parameters: SP005, SP037, SP199

---Setting range---

0 to 5000 (%)
Select the spindle functions. Functions are allocated to each bit. Set this in hexadecimal format.

**bit F-C: ovsn**  
Overshooting compensation type 3 non-sensitive band  
Set the non-sensitive band of the overshooting compensation type 3 in increments of $2^\circ/1000$. In the feed forward control, set the non-sensitive band for the model position droop and ignore the model overshooting. Set to "$2^\circ/1000$" as a standard.

**bit B-9:**  
Not used. Set to "0".

**bit 8: mken**  
Coil switch allowance in deceleration control  
This enables a coil changeover while decelerating after an emergency stop for a spindle motor with coil changeover specification. A coil changeover may enable an excessive load inertia to stop within the maximum delay time.  
0: Normal (Disable)  
1: Enable

**bit 7-6: thno**  
Select the thermistor characteristics.

#13231  SP231
Not used. Set to "0000".

#13232  SP232
Not used. Set to "0000".

#13233  SP233  IVC
Voltage non-sensitive band compensation
When 100% is set, the voltage equivalent to the logical non-energized time will be compensated.
When "0" is set, 100% compensation will be performed.
Adjust in increments of 10% from the default value 100%.
If the value is too large, vibration or vibration noise may be generated.
---Setting range---
0 to 255 (%)

#13234  SP234
Not used. Set to "0".

(PR) #13235  SP235  R2H
Temperature compensation gain
Set the magnification in converting the thermistor temperature to the control compensation amount.
When "0" is set, the temperature compensation function is disabled.
When not using, or when using an IPM spindle motor, set to "0".
---Setting range---
0 to 400 (%)

(PR) #13236  SP236  WIH
Temperature compensation time constant
Set the delay time constant from the thermistor temperature to the control compensation amount.
When "0" is set, the delay time constant is disabled.
When not using, or when using an IPM spindle motor, set to "0".
---Setting range---
0 to 150 (min)

(PR) #13237  SP237  TCF
Torque command filter
Set the filter for the torque command.
The standard value is "500".
---Setting range---
0 to 5000 (rad/s)

(PR) #13238-13240  SP238-SP240
Not used. Set to "0".

(PR) #13241-13256  SP241-SP256
This is automatically set by the NC system.
16.10 Spindle-type Servo Parameters

**#52001 SVSPEC**
Slip mode servo: Specification

[Exclusive for spindle-mode servo motor]

bit0: Selection of position loop gain when C axis is selected
0: Use the position loop gain (#52203 SV003, #52204 SV004, #52257 SV057)
1: Use the spindle sync control position loop gain (#52249 SV049, #52250 SV050, #52258 SV058)

---Setting range---
00 to FFFF (HEX)

**#52002 svzsp**
Slip mode servo: Motor zero speed

[Exclusive for spindle-mode servo motor]
Specify the motor rotation speed at which zero speed detection is carried out. When the actual motor speed drops to the specified speed or below, the zero speed detection signal turns ON. The standard setting value is "50". When the setting value is "0", it is on the standard setting value.

---Setting range---
0 to 1000 (r/min)

**#52003 svsdts**
Slip mode servo: Speed detection set value

[Exclusive for spindle-mode servo motor]
Specify the motor speed at which speed detection is carried out. When the actual motor speed drops to the specified speed or below, the speed detection signal turns ON. The standard setting value is 10% of the "#3001 slimt1" setting value. When the setting value is "0", it is on the standard setting value.

---Setting range---
0 to 32767 (r/min)

**#52004 svtlm1**
Slip mode servo: Torque limit 1

[Exclusive for spindle-mode servo motor]
Specify the torque limit value to be applied when Torque limit (Control input 1/bitA,9,8)=001.

---Setting range---
0 to 999 (Short-time rated %)

**#52005 svtlm2**
Slip mode servo: Torque limit 2

[Exclusive for spindle-mode servo motor]
Specify the torque limit value to be applied when Torque limit (Control input 1/bitA,9,8)=010.

---Setting range---
0 to 999 (Short-time rated %)

**#52006 svtlm3**
Slip mode servo: Torque limit 3

[Exclusive for spindle-mode servo motor]
Specify the torque limit value to be applied when Torque limit (Control input 1/bitA,9,8)=011.

---Setting range---
0 to 999 (Short-time rated %)

**#52201-52456 SV001-SV256**
Slip type Servo Parameters

The description and setting range for these parameters are the same as Servo parameters "SV001" to "SV256". Refer to "Servo Parameters" for details.

(Note) Set the same value to #52203 SV003(PGN) for the reference and synchronized spindles in spindle synchronization.

- A, B, C, U, V, W, X, Y, Z
- Two digits between A to Z and 1 to 9
- 0: Mechanical axis specifications

Set the distance in the horizontal axis direction between the spindle holder center and the rotation center of the tool-side rotary axis.

--- Setting range ---
- -99999.999 to 99999.999 (mm)

Set the distance in the vertical axis direction between the spindle holder center and the rotation center of the tool-side rotary axis.

--- Setting range ---
- -99999.999 to 99999.999 (mm)

Set the distance in the height axis direction between the spindle holder center and the rotation center of the tool-side rotary axis.

--- Setting range ---
- -99999.999 to 99999.999 (mm)

Not used. Set to "0.000".

Not used. Set to "0.000".

</tbody>
</table>

#6401-6448 R7800-Low - R7823-High Bit selection

These bit type parameters are used in the user PLC (ladder).

#6449 R7824-Low Bit selection

bit7: Control unit thermal alarm valid
bit6: Setting and display unit thermal management valid (This function may not be available for some NC models.)
bit5: Set to "0".
bit4: Battery alarm/warning detection disabled
(Note) When the parameter is set to "1", the "Battery alarm" signal and the "Battery warning" signal will not be turned ON, and the alarm messages will not be displayed.
bit3-0: Set to "0".

#6450 R7824-High Bit selection

bit7: Set to "0".
bit6: External alarm message display (This function may not be available for some NC models.)
bit5: Alarm/operator change (This function may not be available for some NC models.)
bit4: Full screen display of message (This function may not be available for some NC models.)
bit3: Set to "0".
bit2: Operator message valid
bit1: Not used. Set to "0".
bit0: Not used. Set to "0".

#6451 R7825-Low Bit selection

bit7-4: Set to "0".
bit3: Select the key input switch setting.
  0: Key code is processed without going through the sequence program.
  1: Key code is processed through the sequence program.
(Note) When this parameter is 1, key data is set in KEYOUT(R212) through a sequence program, and is enabled. Even if the key data is not changed through a sequence program, make sure to loop-back the key data read from KEYIN(R8) of the NC to R212 of the PLC. Without this loop-back, the key becomes disabled. If the program on the PLC side is at a stop (including a case when STOP is selected by the RUN/STOP switch), key data does not go through the PLC.
bit2-0: Set to "0".

#6452 R7825-High Bit selection

bit7: Set to "0".
bite Branch destination label check valid
bit5: Set to "0".
bite Not used. Set to "0".
bite3-0: Set to "0".

#6453 R7826-Low Bit selection

bit7: Set to "0".

#6454 R7826-High Bit selection

bit7-0: Set to "0".
bit7: Enable ladder program writing during RUN  
bit6: Enable ladder program writing during RUN (in high-speed processing)  
bit5-3: Set to "0".  
bit2-0: R device access variables decimal point valid region

#6456  R7827-High  Bit selection
bit7-5: Set to "0".  
bit4: Motor insulation deterioration detection ON  
bit3: Motor insulation deterioration warning ON  
bit2-0: Set to "0".

#6457-6458  R7828-Low - R7828-High  Bit selection  
High-speed input specification 1
#6459-6460  R7829-Low - R7829-High  Bit selection  
High-speed input specification 2
#6461-6462  R7830-Low - R7830-High  Bit selection  
High-speed output specification 1
#6463-6464  R7831-Low - R7831-High  Bit selection  
High-speed output specification 2
#6465-6466  R7832-Low - R7832-High  Bit selection  
High-speed input specification 3
#6467-6468  R7833-Low - R7833-High  Bit selection  
High-speed input specification 4
#6469-6470  R7834-Low - R7834-High  Bit selection  
Set to "0".

#6471  R7835-Low  Bit selection
bit7-1: Set to "0".  
bit0: ERROR LED display  
Select the display specifications of ERROR LED (red) when only minor errors occur.  
0: Turning OFF when only minor errors occur.  
1: Turning ON when only minor errors occur.

#6472  R7835-High  Bit selection  
Set to "0".

#6473-6474  R7836-Low - R7836-High  Bit selection  
High-speed output specification 3
#6475-6476  R7837-Low - R7837-High  Bit selection  
High-speed output specification 4
#6477-6480  R7838-Low - R7839-High  Bit selection  
Set to "0".

#6481-6496  R7840-Low - R7847-High  Bit selection  
This is reserved for debugging by MITSUBISHI. Set to "0".

#6497-6596  R7848-Low - R7897-High  Bit selection  
These bit type parameters are used in the user PLC (ladder).

<tr>
<td></td>
<td></td>
<td>(Note) When the axis moves in positive direction with bidirectional pitch error compensation enabled, set compensation data No. of which locates on the nearest point to negative side. The compensation point should be set with even number.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>---Setting range---</td>
</tr>
<tr>
<td></td>
<td></td>
<td>4101 to 5124</td>
</tr>
</tbody>
</table>
Set the compensation data No. at the farthest end on the positive side.
(Note) When the axis moves in negative direction with bidirectional pitch error compensation enabled, set compensation data No. of which locates on the nearest point to positive side. The compensation point should be set with even number.

---Setting range---
4101 to 5124

Set the scale factor for the compensation amount.
---Setting range---
0 to 99

Set the interval to divide the basic axis.
Each compensation data will be the compensation amount for each of these intervals.
---Setting range---
0.001 to 9999.999 (mm)

Select whether to enable bidirectional pitch error compensation.
0: Disable
1: Enable

When bidirectional pitch error compensation is enabled, set the compensation amount of the reference position when the axis moves to the position from the opposite direction of the zero point return.
(Note) The actual compensation amount will be the value obtained by multiplying the setting value with the compensation scale.
---Setting range---
-32768 to 32767

Set the compensation amount for each axis.
(Note) The actual compensation amount will be the value obtained by multiplying the setting value with the compensation scale.
---Setting range---
-32768 to 32767

16.18 Macro List

#7001 M[01] Code
Set the M code used for calling out the macro with the M command.
Select codes to be entered other than the codes basically required by the machine and M codes of M0, M1, M2, M30, M96 through M99, and M198.
This is valid when "#1195 Mmac" is set to "1".
---Setting range---
0 to 9999

#7002 M[01] TYPE
Specify the macro call type.
0: Equivalent to M98 P****;
1: Equivalent to G65 P****;
2: Equivalent to G66 P****;
3: Equivalent to G66.1 P****;
4: Equivalent to G144 D0 A****; (Sub part system control II complete wait method)
5: Equivalent to G144 D1 A****; (Sub part system control II parallel process method)

#7003 M[01] Program No.
Set the No. of the program or file name to be called out. The file name can contain up to 32 characters.
---Setting range---
Program name or file name (up to 32 characters)

#7011 M[02] Code
The setting method is same as "#7001".

#7012 M[02] Type
The setting method is same as "#7002".

#7013 M[02] Program No.
The setting method is same as "#7003".

#7021 M[03] Code
The setting method is same as "#7001".

#7022 M[03] Type
The setting method is same as "#7002".

#7023 M[03] Program No.
The setting method is same as "#7003".

The setting method is same as "#7001".

#7032 M[04] Type
The setting method is same as "#7002".

#7033 M[04] Program No.
The setting method is same as "#7003".

#7041 M[05] Code
The setting method is same as "#7001".

#7042 M[05] Type
The setting method is same as "#7002".

#7043 M[05] Program No.
The setting method is same as "#7003".

#7051 M[06] Code
The setting method is same as "#7001".
The setting method is same as "#7001".

The setting method is same as "#7002".

The setting method is same as "#7003".

The setting method is same as "#7001".

The setting method is same as "#7002".

The setting method is same as "#7003".

The setting method is same as "#7001".

The setting method is same as "#7002".

The setting method is same as "#7003".

---Setting range---

0 to 3

Set the type for when calling out the macro with the 2nd miscellaneous command.

The macro will be called out with the "#1170 M2name" address command when "#1198 M2mac" is set to "1". The setting method is same as "M call macro".

---Setting range---

Program name or file name (up to 32 characters)

Set the G code to be used when calling the macro with a G command.

Do not set a G code used in the system.

G101 to G110 and G200 to G202 are user macro I codes. However, if a parameter is set for the G code call code, the G code call will have the priority, and these cannot be used as the user macro I.

---Setting range---

1 to 999
Specify the macro call type.
0: Equivalent to M98 P****;
1: Equivalent to G65 P****;
2: Equivalent to G66 P****;
3: Equivalent to G66.1 P****;

---Setting range---
0 to 3

Set the No. of the program or file name to be called out. The file name can contain up to 32 characters.

---Setting range---
Program name or file name (up to 32 characters)

The setting method is same as "#7201".

The setting method is same as "#7202".

The setting method is same as "#7203".

The setting method is same as "#7201".

The setting method is same as "#7202".

The setting method is same as "#7203".

The setting method is same as "#7203".
#7263  G[07] Program No.
The setting method is same as "#7203".

#7271  G[08] Code
The setting method is same as "#7201".

#7272  G[08] Type
The setting method is same as "#7202".

#7273  G[08] Program No.
The setting method is same as "#7203".

#7281  G[09] Code
The setting method is same as "#7201".

#7282  G[09] Type
The setting method is same as "#7202".

#7283  G[09] Program No.
The setting method is same as "#7203".

#7291  G[10] Code
The setting method is same as "#7201".

#7292  G[10] Type
The setting method is same as "#7202".

#7293  G[10] Program No.
The setting method is same as "#7203".

#7302  Smac Type
Set the type No. for when calling the macro with an S command.
This is valid when "#1196 Smac" is set to "1".
The setting method is same as "M call macro".
---Setting range---
0 to 3

#7303  Smac Program No.
Set the program No. for when calling the macro with an S command.
This is valid when "#1196 Smac" is set to "1".
The setting method is same as "M call macro".
---Setting range---
Program name or file name (up to 32 characters)

#7312  Tmac Type
Set the type for when calling the macro with a T command.
This is valid when "#1197 Tmac" is set to "1".
The setting method is same as "M call macro".
---Setting range---
0 to 3

#7313  Tmac Program No.
Set the program No. for when calling the macro with a T command.
This is valid when "#1197 Tmac" is set to "1".
The setting method is same as "M call macro".
---Setting range---
Program name or file name (up to 32 characters)

### 16.19 Position Switches

(Note) The parameters #7741 to #7814 (position switch No. 25 to 32) are only for C80.

#### #7500 Pcheck

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>#7500 Pcheck</td>
<td>High-speed switching of position switch</td>
</tr>
</tbody>
</table>

Specify whether to perform position switch area checking at high speeds.

- 0: Do not perform position switch area checking at high speed (do it the same as before).
- 1: Perform position switch area checking at high speed.

For C80, whether the setting is "0" or "1", the operation of "1" is always performed.

#### #7501+10(n-1) PSWn axis

- "n" represents the position switch No. (n=1 to 24)

Specify the name of the axis for which a position switch is provided.

--- Setting range ---
- NC axis: the NC axis address such as X, Y, Z, U, V
- PLC axis: the PLC axis No. such as 1, 2, 3, 4, 5, 6, 7, 8

#### #7502+10(n-1) PSWn dog1

- "n" represents the position switch No. (n=1 to 24)

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC. For the device No., refer to the PLC Interface Manual.

--- Setting range ---
- -99999.999 to 99999.999 (mm)

#### #7503+10(n-1) PSWn dog2

- "n" represents the position switch No. (n=1 to 24)

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC. For the device No., refer to the PLC Interface Manual.

--- Setting range ---
- -99999.999 to 99999.999 (mm)

#### #7504+10(n-1) PSWn check

- "n" represents the position switch No. (n=1 to 24)

When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or encoder feedback position, for each position switch.

- 0: Use the command type machine position as the machine position for position switch area checking.
- 1: Use the encoder feedback position as the machine position for position switch area checking.

#### #7741+10(n-25) PSWn axis

- "n" represents the position switch No. (n=25 to 32)

Specify the name of the axis for which a position switch is provided.

--- Setting range ---
- PLC axis: the PLC axis No. such as 1, 2, 3, 4, 5, 6, 7, 8

#### #7742+10(n-25) PSWn dog1

- "n" represents the position switch No. (n=25 to 32)

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC. For the device No., refer to the PLC Interface Manual.

--- Setting range ---
- -99999.999 to 99999.999 (mm)

#### #7743+10(n-25) PSWn dog2

- "n" represents the position switch No. (n=25 to 32)

When the machine enters the range between imaginary dog positions 1 and 2, a signal is output to the PLC. For the device No., refer to the PLC Interface Manual.

--- Setting range ---
- -99999.999 to 99999.999 (mm)
When position switch area checking at high speed is selected, specify the mode of area checking, i.e., whether to use the command type machine position or encoder feedback position, for each position switch.

0: Use the command type machine position as the machine position for position switch area checking.
1: Use the encoder feedback position as the machine position for position switch area checking.

</tr>
</tbody>
</table>

**Setting range**

0 to 8

---

**Setting range**

0 to 360

---

The bits that are not explained here must be set to "0".

**bit3:**

0: Automatic reach signal isn't interlocked with the start signal.
1: Automatic reach signal is interlocked with the start signal.

**bit4:**

0: Automatic reach signal is turned ON again.
1: Automatic reach signal isn't turned ON again.

**bit5:**

0: Station No. Output within fixed position.
1: Station No. Constantly output.

**bit9:**

0: Rotation direction determined by operation control signal (DIR)
1: Rotation direction in the shortcut direction

**bitE:**

0: Rotation direction in operation control signal (DIR) or in the shortcut direction
1: Rotation direction in the arbitrary position command sign direction

**bitF:**

0: Stopper direction is in the positioning direction.
1: Stopper direction is in the sign direction of the stopper amount.

---

**Setting range**

0.000 to 99999.999 (mm)

---

Set the movement stroke length for linear axes.

(Note 1) Setting "0.000" causes an MCP alarm at the power ON.

(Note 2) This parameter is meaningless at the non-uniform index or random position command.

---

Set the distance (offset) from the reference position to station 1.

---

**Setting range**

---Setting range---
-99999.999 to 99999.999 (° or mm)

Set the station 20 coordinate value when arbitrary coordinate assignment is selected. The station 1 coordinate value is fixed at "0.000" (machine coordinate zero point).
---Setting range---
-99999.999 to 99999.999 (° or mm)

Select the criterion for the output of position switches 1 to 15.
bit0 to E correspond to position switches 1 to 15.
0: Judged by the machine position of the command system.
1: Judged by the machine FB position (actual position).

(Note) The bits that are not explained here must be set to "0".

Set "PSW1 area setting" 1 and 2 to specify the area where the position switch 1 will turn ON when the machine is positioned.
Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.
For rotary axes, the output turns ON in the area excluding 0.000 degree.
---Setting range---
-99999.999 to 99999.999 (° or mm)
Set "PSW2 area setting" 1 and 2 to specify the area where the position switch 2 will turn ON when the machine is positioned.

Whether the value of setting 1 is larger than setting 2 (or vice versa) does not affect the position switch operation.

For rotary axes, the output turns ON in the area excluding 0.000 degree.

---Setting range---
-99999.999 to 99999.999 (° or mm)

---Setting range---
-99999.999 to 99999.999 (° or mm)

---Setting range---
-99999.999 to 99999.999 (° or mm)

---Setting range---
-99999.999 to 99999.999 (° or mm)

---Setting range---
-99999.999 to 99999.999 (° or mm)

### Detailed Settings

- **SBT_INT (PR) #51011 SBT interval**
  - Set the time that elapses before the next SBT incomplete signal (SBTNFEXm / SBTNFMOm) turns ON after completing the brake test.
  - When set "0", the interval will be 8 hours.
  - **Setting range**: 0 to 255 hours

- **CRSCHK_TOL (PR) #51012 Cross-check status inconsistency tolerable time**
  - Set the tolerable time for inconsistency between CPUs status. (When the status is inconsistent for more than tolerable time, the alarm occurs and the motor power shuts OFF.)
  - When set "0", the inconsistency tolerable time is 100 ms.
  - **Setting range**: 0 to 5000 (ms)

- **SF_PSWD (PR) #51013 Safe password**
  - Set the safety password.
  - Setting: 7 or 8 uppercase alphanumeric characters
  - If no password is set, turn ON the machine parameter setup mode to set the safety parameters.
  - **Setting range**: 7 or 8 uppercase alphanumeric characters

- **safe_drv_test (PR) #51015 Drive safety function easy test mode**
  - Select whether to enable the simple test mode in which the drive safety function operation can be checked without connecting any smart safety observation-capable drive unit.
  - 0: Disable the drive safety function simple test mode
  - 1: Enable the drive safety function simple test mode

- **SCN_Enable (PR) #51016 Safety communication network valid**
  - Select whether to enable or disable the safety communication network.
  - 0: Disabled
  - 1: Enabled

- **SCN_Slot No. (PR) #51701 Safety communication network slot number**
  - Select the number of the slot in which the NC-controlled CC-Link IE Field network module is mounted.
  - (*) Set the I/O number of the base unit. Do not set a slot number that has already been set for any other CPU.
  - **Setting range**: 0 to 11

- **SCN_Network No. (PR) #51702 Safety communication network number**
  - Specify the network number of the NC-controlled CC-Link IE Field network module.
  - (*) Set the network number of the master station.
  - **Setting range**: 0 to 239

- **SCN_Station No. (PR) #51703 Safety communication network station number**
  - Specify the station number of the NC-controlled CC-Link IE Field network module.
  - (*) Set the unique station number of the master station.
  - **Setting range**: 0 to 120

- **SCN_SIM Time (PR) #51704 Safety communication network transmission interval to be monitored**
  - Specify the transmission interval to be monitored by the NC-controlled CC-Link IE Field network module for detecting a safety communication error in each safety connection.
  - Note that when the set value is in the range of 0 to 349, the default value "350" is applied (Transmission interval to be monitored is 35 ms).
  - **Setting range**: 0 to 10000 (100 μs)

## 16 Machine Parameters

### SLP Position Tolerance

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Setting Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>SLP_PositionPn</td>
<td>SLP position tolerance n (+)</td>
<td>-99999.999 to +99999.999 (mm)</td>
</tr>
<tr>
<td>SLP_PositionMn</td>
<td>SLP position tolerance n (-)</td>
<td>-99999.999 to +99999.999 (mm)</td>
</tr>
</tbody>
</table>

### SLP Detection Delay Time

- **#51134 SLP_T1**
  - Specify a period of time to detect a machine position error while SLP is ON. If the time set in this parameter has elapsed with the command/FB position outside the SLP position tolerance range, a safe stop (SS1 or STO) is executed.
  - **Setting range** 0 to 9999 (ms)

### SSM Speeds

- **#51135-51138 SSM_Speed1-4**
  - Specify the upper limits of machine-end speed determined as safe for each of SSM speeds 1 to 4. If the command/FB speed is at the safe speed or lower while SSM is ON, the Under SSM safe speed signal turns ON. If the command/FB speed exceeds the safe speed, the Under SSM safe speed signal turns OFF. The safe speed to be applied to SSM is calculated using the following equation.
  - (When the Under SSM safe speed signal is ON) Safe speed = SSM speed
  - (When the Under SSM safe speed signal is OFF) Safe speed = SSM speed - SSM hysteresis width
  - **Setting range** 0 to 999999 (mm/min or °/min)

### SSM Hysteresis

- **#51139-51142 SSM_Hysteresis1-4**
  - Specify the hysteresis widths that correspond to SSM speeds 1 to 4. For details refer to SSM speeds 1 to 4.
  - **Setting range** 0 to 999999 (mm/min or °/min)

### SCA Position

- **#51143+2(n-1) SCA_PositionPn**
  - Specify the upper and lower limits of machine position determined as safe for each of SCA positions 1(+) to 16(+). If the command/FB position is in the SCA safe position or smaller while SCA is ON, the Safe cam position signal turns OFF. If the position has exceeded the SCA safe position, the Safe cam position signal turns ON. The SCA safe position is calculated using the following equation.
  - (When the Safe cam position signal is ON) SCA safe position = SCA position (+) - SCA hysteresis width
  - (When the Safe cam position signal is OFF) SCA safe position = SCA position (+)
  - **Setting range** -99999.999 to +99999.999 (mm)
Specify the upper and lower limits of machine position determined as safe for each of SCA positions 1(-) to 16(-). If the command/FB position is in the SCA safe position or smaller while SCA is ON, the Safe cam position signal turns OFF. If the position has exceeded the SCA safe position, the Safe cam position signal turns ON. The SCA safe position is calculated using the following equations.

<table>
<thead>
<tr>
<th>(When the Safe cam position signal is ON)</th>
<th>(When the Safe cam position signal is OFF)</th>
</tr>
</thead>
<tbody>
<tr>
<td>SCA safe position = SCA position (-) – SCA hysteresis width</td>
<td>SCA safe position = SCA position (-)</td>
</tr>
</tbody>
</table>

---**Setting range---**

<table>
<thead>
<tr>
<th>SCA PositionMn</th>
<th>SCA position n (-)</th>
</tr>
</thead>
<tbody>
<tr>
<td>#51144+2(n-1)</td>
<td>“n” represents the SCA position No. (n=1 to 16)</td>
</tr>
</tbody>
</table>

Specify the hysteresis widths that correspond to SCA positions 1 to 16. For details refer to SCA positions 1(+) to 16(+-).

---**Setting range---**

<table>
<thead>
<tr>
<th>SCA_Hysteresis</th>
<th>SCA hysteresis width</th>
</tr>
</thead>
<tbody>
<tr>
<td>#51175</td>
<td>0 to 99999.999 (mm)</td>
</tr>
</tbody>
</table>

Specify the upper limit of machine-end speed determined as a safe operating stop. If the SOS_V detection delay time has elapsed with the command/FB speed exceeding the speed of this parameter while SOS is ON, a safe stop (SS1 or STO) is executed. The point of time at which the command/FB speed drops to that of this parameter or lower while SS1/SS2 is ON is treated as a standstill.

---**Setting range---**

<table>
<thead>
<tr>
<th>SOS_Speed</th>
<th>SOS stop speed</th>
</tr>
</thead>
<tbody>
<tr>
<td>#51176</td>
<td>0 to 9999 (mm/min or °/min)</td>
</tr>
</tbody>
</table>

Specify a period of time to detect a speed error while SOS is ON. If a period of time set in this parameter has elapsed with the command/FB speed exceeding the SOS stop speed while SOS is ON, a safe stop (SS1 or STO) is executed.

---**Setting range---**

<table>
<thead>
<tr>
<th>SOS_T1</th>
<th>SOS_v detection delay time</th>
</tr>
</thead>
<tbody>
<tr>
<td>#51177</td>
<td>0 to 9999 (ms)</td>
</tr>
</tbody>
</table>

Specify the upper limit of machine-end position deviation determined as a safe operating stop. If the SOS_PD detection delay time has elapsed with the position deviation (difference between the command and FB positions) exceeding that of this parameter while SOS is ON, a safe stop (SS1 or STO) is executed.

---**Setting range---**

<table>
<thead>
<tr>
<th>SOS_Droop</th>

</tbody>
</table>

Specify a period of time to detect a position deviation error while SOS is ON. If a period of time set in this parameter has elapsed with the position deviation exceeding the SOS position deviation tolerance while SOS is ON, a safe stop (SS1 or STO) is executed.

---**Setting range---**

<table>
<thead>
<tr>
<th>SOS_T2</th>
<th>SOS_PD detection delay time</th>
</tr>
</thead>
<tbody>
<tr>
<td>#51179</td>
<td>0 to 9999 (ms)</td>
</tr>
</tbody>
</table>

Specify the upper limit of machine-end travel distance (minus side) determined as a safe operating stop. If the SOS_P detection delay time has elapsed with the command/FB travel distance in the minus direction exceeding that of this parameter while SOS is ON, a safe stop (SS1 or STO) is executed.

---**Setting range---**

<table>
<thead>
<tr>
<th>SOS_PositionM</th>
<th>SOS travel distance tolerance (-)</th>
</tr>
</thead>
<tbody>
<tr>
<td>#51180</td>
<td>0 to 9999.999 (mm or °)</td>
</tr>
</tbody>
</table>
Specify the upper limit of machine-end travel distance (plus side) determined as a safe operating stop. If the SOS_P detection delay time has elapsed with the command/FB travel distance in the plus direction exceeding that of this parameter while SOS is ON, a safe stop (SS1 or STO) is executed.

*When this parameter is set to 0, "SOS travel distance error" may occur even though the axis is at a standstill.

---Setting range---
0 to 9999.999 (mm or °)

---Setting range---
0 to 9999 (ms)

Specify a period of time to detect a deceleration error while SS1 is ON. If the time set in this parameter has elapsed with the command/FB speed exceeding the SOS stop speed, STO is activated.

---Setting range---
0 to 99999 (ms)

---Setting range---
0 to 99999 (ms)

Specify a period of time to wait from when the drive unit receives an STO request from the NC until when STO is actually executed. Set this time so that the brake is activated within this period of time. When set to "0", the STO execution standby time is treated as 200 ms.

---Setting range---
0 to 20000 (ms)

Set the current limit value in the brake test in proportion to the stall current. When set to "0", the alarm occurs at the start of the brake test. (The test does not start.)

---Setting range---
0 to 100 (%)
Set the command speed to command to the test target axis at the time of brake test. When set to "0", the alarm occurs at the start of the brake test. (The test does not start.)

---Setting range---
0 to 1000000 (mm/min or °/min)

Set the time to continue the observation of axis movement amount after the output of movement command for test at the time of brake test. When set to "0", the observation time is 1000 ms.

---Setting range---
0 to 30000 (ms)

Set the tolerable movement amount of the test target axis at the time of brake test. (The alarm occurs if the movement amount during the test exceeds this parameter value.) When set "0", the tolerable movement amount is 100 mm (or °).

---Setting range---
0 to 99999.999 (mm or °)

Sets the tolerable value of the difference (error amount) between [saved position at power shut OFF] and [restored position at power ON] in SLP/SCA encoder diagnosis during power OFF. When this above difference exceeds the tolerable value, the system starts in STO status. When set "0", the tolerable value is as in below formula.

Tolerable movement amount = SV018(PIT) * 0.9

---Setting range---
0 to 99999.999 (mm)

Enables the encoder diagnosis during power OFF to use SLP/SCA for the axes connected with Multi revolution safety encoder.

0: Disable the encoder diagnosis during power OFF to use SLP/SCA for the axes connected with Multi revolution safety encoder
1: Enable the encoder diagnosis during power OFF to use SLP/SCA for the axes connected with Multi revolution safety encoder

* As for the axes not connected with Multi revolution safety encoder, the above diagnosis will be enabled regardless of the setting value of this parameter.
* The above diagnosis will not be executed when SLP/SCA are disabled. (Both SLP_Enable and SCA_Enable are 0.)

Sets the tolerable value of the position deviation (the difference between the commanded position generated inside NC and the feedback position received from drive unit) in the position deviation diagnosis. When the position deviation exceeds the tolerable value, the Safe stop (SS1/STO) will be carried out. When "0" is set, the tolerable value is as in below formula.

Tolerable value = SV018(PIT) * 2.0

---Setting range---
0 to 32767 (mm or °)
Specify the Safety axis’s specification by turning ON the corresponding bit. Input the hexadecimal value for this parameter.

bit0-2: Not used
bit3: Motor brake connection status
  0: Motor brake connected
  1: Motor brake not connected
bit4-F: Not used

* If the settings of encoder type (bit0, bit1) are different from the actually connected ones, the servo alarm 4D is output.

---Setting range---
0x0000 to 0xFFFF

For a safety encoder-connected axis, set the safety encoder type. When the Multi revolution part is connected to the safety encoder that is outside the certification of safety standards, and in SLP/SCA enabled, SLP/SCA encoder diagnosis during power OFF will be carried out regardless of the setting value of #51198 Ml-RtAbsSEnc_FDChk.

0: Safety encoder that is outside the safety certification for Multi revolution
1: Safety encoder that is certified with safety standards for Multi revolution
16.24 Safety Spindle Parameters

**Exclude the axis from the smart safety observation target.**

0: Enable smart safety observation
1: Disable smart safety observation

(Note) The settings of "#51101 SF_Disable" and "#51301 SF_SDisable" must be the same within a multi-hybrid drive unit.

**Select which of the safe stop methods to use when an error is detected in the smart safety observation.**

0: STO
1: SS1

Specify the upper limits of machine-end speed determined as safe for each of SLS speed tolerances 1 to 4.

If the SLS detection delay time has elapsed with the command/FB speed exceeding the safely-limited speed while SLS is ON, a safe stop (SS1 or STO) is executed. The safely-limited speed to be applied to SLS is calculated using the following equation.

\[
\text{Safely-limited speed} = \text{SLS speed tolerance} \times \text{SLS speed override} / 100
\]

---Setting range---

0 to 999999.9 (r/min)

Specify the speed overrides 1 to 16 with respect to SLS speed tolerances 1 to 4. For details refer to SLS speed tolerances 1 to 4.

---Setting range---

0 to 100 (%)

Specify the speed clamp ratio that is applied while SLS is ON. Set the ratio to about 80 to 90%. While SLS is ON, the command speed is clamped at the following speed:

\[
\text{Clamp speed} = \text{Safely-limited speed} \times \text{SLS speed clamp ratio} / 100
\]

(Safely-limited speed = SLS speed tolerance \times SLS speed override / 100)

---Setting range---

0 to 100 (%)

Specify a period of time to detect a speed error while SLS is ON. A safe stop (SS1 or STO) is executed if the period of time set in this parameter has elapsed with the command/FB speed exceeding the safely-limited speed.

---Setting range---

0 to 9999 (ms)

Specify a period of time to detect a deceleration error that is caused due to change of the safely-limited speed at the start of or during SLS. If you have changed the safely-limited speed at the start of or during SLS, and the time set in this parameter has elapsed with the command/FB speed exceeding the safely-limited speed, a safe stop (SS1 or STO) is executed. When set to "0", the detection time is treated as 200(ms).

---Setting range---

0 to 99999 (ms)
Specify the upper limits of machine-end speed determined as safe for each of SSM speeds 1 to 4. If the command/FB speed is at the safe speed or lower while SSM is ON, the Under SSM safe speed signal turns ON. If the command/FB speed exceeds the safe speed, the Under SSM safe speed signal turns OFF. The safe speed to be applied to SSM is calculated using the following equation.

\[
\text{Safe speed} = \begin{cases} 
\text{SSM speed} & \text{(When the Under SSM safe speed signal is ON)} \\
\text{SSM speed} - \text{SSM hysteresis width} & \text{(When the Under SSM safe speed signal is OFF)} 
\end{cases}
\]

---Setting range---
0 to 999999.9 (r/min)

Specify the hysteresis widths that correspond to SSM speeds 1 to 4. For details refer to SSM speeds 1 to 4.

---Setting range---
0 to 999999.9 (r/min)

Specify the upper limit of machine-end speed determined as a safe operating stop.

> If the SOS_V detection delay time has elapsed with the command/FB speed exceeding that of this parameter while SOS is ON, a safe stop (SS1 or STO) is executed.

> The point of time at which the command/FB speed drops to that of this parameter or lower while SS1/SS2 is ON is treated as a standstill.

> When this parameter is set to 0, "SOS speed error" may occur even though the spindle is at a standstill.

---Setting range---
0 to 9999.9 (r/min)

Specify a period of time to detect a speed error while SOS is ON. If the period of time set in this parameter has elapsed with the command/FB speed exceeding the SOS stop speed while SOS is ON, a safe stop (SS1 or STO) is executed.

---Setting range---
0 to 9999 (ms)

Specify the upper limit of machine-end position deviation determined as a safe operating stop. If the SOS_PD detection delay time has elapsed with the position deviation (difference between the command and FB positions) exceeding that of this parameter while SOS is ON, a safe stop (SS1 or STO) is executed.

> When this parameter is set to 0, "SOS position deviation error" may occur even though the spindle is at a standstill.

---Setting range---
0 to 9999 (°)

Specify a period of time to detect a position deviation error while SOS is ON. If a period of time set in this parameter has elapsed with the position deviation (difference between the command and FB positions) exceeding the SOS position deviation tolerance while SOS is ON, a safe stop (SS1 or STO) is executed.

---Setting range---
0 to 9999 (ms)

Specify the upper limit of machine-end travel distance (minus side) determined as a safe operating stop. If the SOS_P detection delay time has elapsed with the command/FB travel distance in the minus direction exceeding that of this parameter while SOS is ON, a safe stop (SS1 or STO) is executed.

> When this parameter is set to 0, "SOS travel distance error" may occur even though the spindle is at a standstill.

---Setting range---
0 to 9999 (°)
Specify the upper limit of machine-end travel distance (plus side) determined as a safe operating stop. If the SOS_P detection delay time has elapsed with the command/FB travel distance in the plus direction exceeding that of this parameter while SOS is ON, a safe stop (SS1 or STO) is executed.

*When this parameter is set to 0, "SOS travel distance error" may occur even though the spindle is at a standstill.

---Setting range---

0 to 9999 (°)

Specify a period of time to detect a travel distance error while SOS is ON. If the period of time set in this parameter has elapsed with the command/FB travel distance exceeding the SOS travel distance tolerance (+/-) while SOS is ON, a safe stop (SS1 or STO) is executed.

---Setting range---

0 to 9999 (ms)

Specify a period of time to detect a deceleration error while SS1 is ON. If the time set in this parameter has elapsed with the command/FB speed exceeding the SOS stop speed, STO is activated.

---Setting range---

0 to 9999 (ms)

Specify a period of time to detect a deceleration error while SS2 is ON. If the time set in this parameter has elapsed with the command/FB speed exceeding the SOS stop speed, STO is activated.

---Setting range---

0 to 9999 (ms)

Specify a period of time to wait from when the drive unit receives an STO request from the NC until when STO is actually executed. Set this time so that the brake is activated within this period of time. When set to "0", the STO execution standby time is treated as 200 ms.

---Setting range---

0 to 20000 (ms)

Set the waiting time for starting the position deviation diagnosis at Spindle non-interpolation mode. The diagnosis of the position deviation at Spindle non-interpolation mode starts after the commanded speed becomes consistent and after the time set by this parameter passes. It stops while the command speed is changing. When set to "0", the Spindle position deviation diagnosis waiting time is 20000 ms.

---Setting range---

0 to 30000 (ms)

Sets the tolerable value of the position deviation (the difference between the commanded position generated inside NC and the feedback position received from drive unit) in the position deviation diagnosis. When the position deviation exceeds the tolerable value, the Safe stop (SS1/STO) will be carried out. When set to "0", the tolerable value is 1080°.

---Setting range---

0 to 32767 (°)
### 16.25 Safety I/O Assignment Parameters
