Thank you for choosing this Mitsubishi Electric Inverter option unit. This Instruction Manual gives handling information and precautions for use of this equipment. Incorrect handling might cause an unexpected fault. Before using the equipment, please read this manual carefully to use the equipment to its optimum performance. Please forward this Instruction Manual to the end user.

### SAFETY INSTRUCTION

#### 1. Electric Shock Prevention

**WARNING**
- While power is ON or when the inverter is running, do not open the terminal cover of the option unit. Doing so may cause burns.
- Before starting wiring or inspection, switch OFF power, wait for at least 10 minutes after the power supply has been switched OFF, and check that there are no residual voltage or charge remaining. The capacitor is charged with high voltage for some time after power OFF and it is dangerous.
- Always install the inverter and the option unit before wiring. Otherwise, you may get an electric shock or be injured.
- Do not touch the option unit or handle the cables with wet hands. Otherwise you may get an electric shock.
- Do not subject the cables to scratches, excessive stress, heavy loads or pinching. Otherwise you may get an electric shock.

**CAUTION**
- Always install the inverter and the option unit before wiring. Otherwise, you may get an electric shock.
- Do not open the terminal cover of the option unit. Doing so may lead to fault or damage of the product.

#### 2. Fire Prevention

**CAUTION**
- Install this option unit on a nonflammable wall without holes. Mounting it to or near flammable material can cause a fire.

#### 3. Injury Prevention

**CAUTION**
- Apply only the voltage specified in the instruction manual to each terminal. Otherwise, burst, damage, etc. may occur.
- Ensure that the cables are connected to the correct terminals. Otherwise, burst, damage, etc. may occur.
- Always make sure that polarity is correct to prevent damage, etc. Otherwise, burst, damage, etc. may occur.
- While power is ON or for some time after power-OFF, do not touch the option unit as they will be extremely hot. Doing so can cause burns.

#### 4. Additional Instructions

Also note the following points to prevent an accidental failure, injury, electric shock, etc.

---

### 1) Transportation and mounting

**CAUTION**
- Transport the product using the correct method that corresponds to the weight. Failure to observe this may lead to injuries.
- Do not install or operate the option unit if it is damaged or has parts missing.
- Do not touch or rest heavy objects on the product.
- Check that the mounting orientation is correct.
- Prevent other conductive bodies such as screws and metal fragments or other flammable substance such as oil from entering the inverter.
- As this option unit is a precision instrument, do not drop or subject it to impact.
- If halogens (including fluorine, chlorine, bromine, and iodine) contained in fumigants for wood packages enter this product, the product may be damaged. Prevent the entry of fumigant residuals or use an alternative method such as heat disinfection. Note that sterilization or disinfection of wood packages should be performed before packing the product.
- Use this option unit under the following environmental conditions: Otherwise, the option unit may be damaged

---

### 2) Usage

**WARNING**
- Do not modify the equipment.
- Do not perform parts removal which is not instructed in this manual. Doing so may lead to fault or damage of the product.

---

### 3) Disposal

**CAUTION**
- Treat as industrial waste.

---

### 4) General instruction

All of the diagrams and drawings in this Instruction Manual show the option unit without a terminal cover, or partially open. Never operate the products in this manner. Always replace the cover and follow this Instruction Manual when operating the products.
This option is a dedicated Filterpack unit for FR-E800 series, FR-E700 series, FR-D700 series, and FR-F700PJ series, which contains a DC reactor, common mode choke and capacitive filter.

1. **Product Checking**

   Unpack the option unit and confirm that the product is as you ordered and intact.

   - **Filterpack type**

     ![Filterpack type diagram]

     Symbol | Applicable power voltage |
     --- | --- |
     None | 200V class |
     H4 | 400V class |

   - **Parts name and plate**

     ![Parts name and plate diagram]

     Black cable: connect to terminal R, S and T of the inverter
     Red cable: connect to terminal P and P1 of the inverter
     Green and yellow striped cable: connect to the earth (ground) terminal

   - **Accessories**

     | Name | Description | Quantity | Refer to page |
     --- | --- | --- | --- |
     Screw for leakage current countermeasure and spacer | When the earth leakage breaker or earth leakage relay operates unnecessarily due to leakage current, use this screw as a countermeasure. | 1 for each | 6 |
     Rear panel installation L-bracket | Included with the 5.5K or higher | 1 | 2 |
     Screw for inverter rear panel installation | Use these screws for installation of the Filterpack onto the inverter rear panel. | 4* | 2 |

   * The screw size differs according to capacities. (H)7.5K or lower: M4×14, (H)11K, (H)15K: M5×20

2. **Applicable Inverter**

   Use the Filterpack along with the inverter in the following table.

   ![Applicable inverter table]

   **Filterpack** | **Applicable inverter** | **Permissible inverter output current (A)*** |
   --- | --- | --- |
   FR-BFP2-0.4K | FR-D720-0.4K | 2.5 |
   FR-BFP2-0.75K | FR-D720-0.75K | 4.2 |
   FR-BFP2-1.5K | FR-D720-1.5K | 7 |
   FR-BFP2-2.2K | FR-D720-2.2K | 10 |
   FR-BFP2-3.7K | FR-D720-3.7K | 16.5 |
   FR-BFP2-5.5K | FR-D720-5.5K | 23.8 |
   FR-BFP2-7.5K | FR-D720-7.5K | 31.8 |
   FR-BFP2-11K | FR-D720-11K | 46 |
   FR-BFP2-15K | FR-D720-15K | 58 |
   FR-BFP2-H0.4K | FR-D740-0.4K | 1.2 |
   FR-BFP2-H0.75K | FR-D740-0.75K | 2.2 |
   FR-BFP2-H1.5K | FR-D740-1.5K | 3.7 |
   FR-BFP2-H2.2K | FR-D740-2.2K | 5 |
   FR-BFP2-H3.7K | FR-D740-3.7K | 8.1 |
   FR-BFP2-H5.5K | FR-D740-5.5K | 12 |
   FR-BFP2-H7.5K | FR-D740-7.5K | 16.3 |
   FR-BFP2-H11K | FR-D740-11K | 23 |
   FR-BFP2-H15K | FR-D740-15K | 29.5 |

   * Select the capacity to make the load current (inverter output) lower than the permissible inverter output current.
3. Installation

3.1 Inverter Installation (Installation of the Filterpack)

3.1.1 Installation of the inverter and Filterpack (for rear panel installation)

- 0.4K to 3.7K (except for FR-E820-3.7K)
  Remove the front cover and wiring cover to attach the inverter.

- FR-E820-3.7K
  [Illustration of inverter installation process]
5.5K to 15K
Remove the L-bracket installation screws from the Filterpack (two for the 7.5K or lower, three for the 11K or higher), and attach the included L-bracket to the Filterpack with these screws. Remove the front cover to attach the inverter.

CAUTION
- When installing the Filterpack to the inverter, use the included installation screws for the inverter rear panel. Using a longer screw may damage the Filterpack.
- Rear panel installation is not available for FR-E720-5.5K and 7.5K, FR-E740-0.4K to 3.7K.
3.1.2 Installation of the Filterpack

The following installations are recommended for the Filterpack and inverter. When encasing multiple inverters, install them in parallel as a cooling measure. Install the inverter (Filterpack) vertically. Side-by-side installation is not available for Filterpacks.

For wiring of the Filterpack and inverter, refer to page 5.

- Rear panel installation
- Side panel installation
- Underneath installation
- Invert installation of the Filterpack
- Sideway installation of the Filterpack

**CAUTION**
- When installing the Filterpack of 11K or 15K on the rear panel of the inverter, do not install on moving objects or places which vibrate (exceeding 1.96 m/s²).
- To release heat of the inverter and Filterpack, leave clearance of 1 cm or more when installing the inverter and Filterpack.
- Install the Filterpack with the wiring portion facing right.
- Underneath installation is not available for 11K and 15K.
- To release heat, leave clearance of 10 cm or more between the inverter and Filterpack.

Install the Filterpack cable carefully without subjecting it to excessive stress when wiring. Also be careful not to damage the cable with sharp items such as an edge of a metal sheet. To prevent malfunctions and damages, never perform installations in the following manner. Only install according to the recommended mounting methods.
4. Wiring

Wire the Filterpack and the inverter according to the following connection diagram. Connect the Filterpack to an input side of the inverter. After wiring, attach the terminal cover of the Filterpack to the terminal block.

**Connection diagram**

*Connect the GND cable of the Filterpack to the earth (ground) terminal of the inverter. Use the earth (ground) terminal of the Filterpack to earth (ground). The inverter is earthed (grounded) through the Filterpack.

**Wiring of the inverter and Filterpack**

Perform wiring of the inverter and Filterpack in the following procedure.

1. Connect the commercial power supply to the terminal R0, S0 and T0 of the Filterpack.
2. Connect the earth (ground) cable (green and yellow striped cable) of the Filterpack to the inverter earth (ground) terminal.
3. Connect the power supply cable (black cable) of the Filterpack to the terminal R, S and T.
4. Remove the jumper across terminals P and P1 of the inverter, and connect the P and P1 cables (red cable) of the Filterpack.
5. Connect the motor cable to the inverter output terminals (U, V, W). (Match the phase sequence.)

**Remarks**

Phase sequence need not be matched.

**CAUTION**

- Make sure that the power cables are connected to the R0, S0 and T0 of the Filterpack. (Phase sequence need not be matched.)
- Never connect the power cable to the U, V, W of the inverter. Doing so will damage the inverter.
- When connecting the Filterpack, make sure that the jumper across the terminals P and P1 of the inverter is removed.
- Connect the Filterpack terminals P and P1 to the inverter terminals P+ and P1, respectively. Improper connection may damage the inverter.
5. Main Circuit Terminal

<table>

<td>Green and yellow stripes</td>
<td>Connect to the earth (ground) terminal of the inverter. (Refer to page 5)</td>
</tr>
</tbody>
</table>

* The terminal screw size is the same as that of the inverter terminal R, S and T.

6. Leakage Current

When using the Filterpack, the leakage current is about 4mA (8mA for the 400V class) (for one phase of the three-phase three wire connection current).

When using the Filterpack, leakage current will be reduced by removing the earth (ground) cable of the capacitive filter, and fixing it with the included screw for leakage current countermeasure (plastic) and spacer (plastic). However, the noise reduction effect of the capacitive filter will be lost. (Pull out the earth (ground) cable slightly to wire the capacitive filter.)

● Installation

![Diagram of Filterpack with earth (ground) cable for capacitive filter]

**CAUTION**

When the earth (ground) cable for the capacitive filter is removed, the cable is charged while power is ON or shortly after power OFF. Do not touch the earth (ground) cable as you may get an electric shock.
