User's Manual

CC-Link/PT Remote I/O Module

1. Installation

1.1. General

This product is designed to be used in industrial applications.

1.2. Appearance

The product is designed to be used in industrial applications.

2. Specifications

2.1. General specifications

This product is designed to be used in industrial applications.

3. Installation

3.1. Installation to DIN rail

Align the module or insert it into the DIN rail. Remove it in the reverse order. This product is designed to be used in industrial applications.

4. Wiring

4.1. External wiring

This product is designed to be used in industrial applications.

4.2. Connection to sensor

4.2.1. Positive control (PNP)

When using a two-wire type sensor, the power supply should be connected to the DIN rail.

4.2.2. Negative control (NPN)

When using a two-wire type sensor, the power supply should be connected to the DIN rail.

5. Output specifications

5.1. General specifications

This product is designed to be used in industrial applications.

5.2. Input specifications

This product is designed to be used in industrial applications.

6. Outside Dimensions

This product is designed to be used in industrial applications.

7. Accessory List

This product is designed to be used in industrial applications.

8. Glossary

This product is designed to be used in industrial applications.
When using a two-wire type sensor, make sure that both the ON and OFF time of the input signal are 1.5ms or more.

CAUTION

Always install and connect the module with the power OFF. Always make sure that the operating voltage is with the power OFF. Before connecting the module, make sure that the input and output signals are properly connected to the power supply. When connecting the module to the power supply, be sure to observe the circuit diagram shown in the installation procedures. 

Notes:

When performing installation and wiring, be sure to follow the instructions provided in the installation procedure. Always make sure that the operating voltage is with the power OFF. Before connecting the module, make sure that the input and output signals are properly connected to the power supply. When connecting the module to the power supply, be sure to observe the circuit diagram shown in the installation procedures.
